## ESSAYS

Not even in poetry do you find such variety of mood and subject as in essays. Death, bachelors, good temper, lying, bringing up children, getting up in the morning, politics, honey, music, sweetness and light,—all these and a thousand others are grist to the essayist's mill.

An essay is a short composition concerned with a single aspect of a subject. It has no set rules and is less complete than a treatise. It is a distinct reflection of the author's mood and character and may be solemn, gay, serious, trifling, whimsical, satiric, informative, analytical, or amusing. It may be found anywhere—embedded in a novel or a biography (the one on "Touch" was in an autobiographical novel) or in a book of travel or philosophy. It may be tacked on to a book as a preface or it may be found standing on its own feet, quite alone, or in company with others of the same nature.

Historically, so far as our modern conceptions are concerned, it began with Montaigne in France and Bacon in England. They were the first and in the eyes of many the greatest, but

there are others that have a quicker appeal for the average work-a-day reader. The quaint formal language of these two, so different from each other, yet equally removed from us, is a slight stumbling block to a beginner, but it is one that can be overcome merely by admitting that it is there. Sir Thomas Browne is another whose language is somewhat removed, but mainly because of its sonorous beauty which has frequently brought it into comparison with organ music. It may not be wise, unless you are already an essay addict, to begin with these but to work to them through Lamb and Holmes and Gissing and Hunt and Irving and old Izaak Walton who hold no screen of any kind between themselves and their readers.

A BACHELOR'S COMPLAINT OF THE BE-  
HAVIOUR OF MARRIED PEOPLE

**A**S a single man, I have spent a good deal of my time in noting down the infirmities of Married People, to console myself for those superior pleasures, which they tell me I have lost by remaining as I am.

I cannot say that the quarrels of men and their wives ever made any great impression upon me, or had much tendency to strengthen me in those anti-social resolutions, which I took up long ago upon more substantial considerations. What oftentimes offends me at the houses of married persons where I visit, is an error of quite a different description;—it is that they are too loving.

Not too loving neither: that does not explain my meaning. Besides, why should that offend me? The very act of separating themselves from the rest of the world, to have the fuller enjoyment of each other's society, implies that they prefer one another to all the world.

But what I complain of is, that they carry this preference so undisguisedly, they perk it up in the faces of us single people so shamelessly, you cannot be in their company a moment without

being made to feel, by some indirect hint or open avowal, that *you* are not the object of this preference. Now there are some things which give no offence, while implied or taken for granted merely; but expressed, there is much offence in them. If a man were to accost the first homely-featured or plain-dressed young woman of his acquaintance, and tell her bluntly, that she was not handsome or rich enough for him, and he could not marry her, he would deserve to be kicked for his ill manners; yet no less is implied in the fact, that having access and opportunity of putting the question to her, he has never yet thought fit to do it. The young woman understands this as clearly as if it were put into words; but no reasonable young woman would think of making this a ground of a quarrel. Just as little right have a married couple to tell me by speeches and looks that are scarce less plain than speeches, that I am not the happy man,—the lady's choice. It is enough that I know that I am not: I do not want this perpetual reminding.

The display of superior knowledge or riches may be made sufficiently mortifying: but these admit of a palliative. The knowledge which is brought out to insult me, may accidentally improve me; and in the rich man's houses and pictures,—his parks and gardens, I have a temporary usufruct at least. But the display of married happiness has none of these palliatives; it is

throughout pure, unrecompensed, unqualified insult.

Marriage by its best title is a monopoly, and not of the least invidious sort. It is the cunning of most possessors of any exclusive privilege to keep their advantage as much out of sight as possible, that their less favoured neighbours, seeing little of the benefit, may the less be disposed to question the right. But these married monopolists thrust the most obnoxious part of their patent into our faces.

Nothing is to me more distasteful than that entire complacency and satisfaction which beam in the countenances of a new-married couple,—in that of the lady particularly; it tells you, that her lot is disposed of in this world; that *you* can have no hopes of her. It is true, I have none; nor wishes either, perhaps; but this is one of those truths which ought, as I said before, to be taken for granted, not expressed.

The excessive airs which those people give themselves, founded on the ignorance of us unmarried people, would be more offensive if they were less irrational. We will allow them to understand the mysteries belonging to their own craft better than we who have not had the happiness to be made free of the company: but their arrogance is not content within these limits. If a single person presume to offer his opinion in their presence, though upon the most indifferent sub-

ject, he is immediately silenced as an incompetent person. Nay, a young married lady of my acquaintance who, the best of the jest was, had not changed her condition above a fortnight before, in a question on which I had the misfortune to differ from her, respecting the properest mode of breeding oysters for the London market, had the assurance to ask with a sneer, how such an old Bachelor as I could pretend to know anything about such matters.

But what I have spoken of hitherto is nothing to the airs which these creatures give themselves when they come, as they generally do, to have children. When I consider how little of a rarity children are,—that every street and blind alley swarms with them,—that the poorest people commonly have them in most abundance,—that there are few marriages that are not blest with at least one of these bargains,—how often they turn out ill, and defeat the fond hopes of their parents, taking to vicious courses, which end in poverty, disgrace, the gallows, &c.—I cannot for my life tell what cause for pride there can possibly be in having them. If they were young phoenixes, indeed, that were born but one in a year, there might be a pretext. But when they are so common—

I do not advert to the insolent merit which they assume with their husbands on these occasions. Let them look to that. But why *we*, who

are not their natural-born subjects, should be expected to bring our spices, myrrh, and incense,—our tribute and homage of admiration,—I do not see.

“Like as the arrows in the hand of the giant, even so are the young children”: so says the excellent office in our Prayer-book appointed for the churching of women. “Happy is the man that hath his quiver full of them”: So say I; but then don’t let him discharge his quiver upon us that are weaponless;—let them be arrows, but not to gall and stick us. I have generally observed that these arrows are double-headed; they have two forks, to be sure to hit with one or the other. As for instance, where you come into a house which is full of children, if you happen to take no notice of them (you are thinking of something else, perhaps, and turn a deaf ear to their innocent caresses), you are set down as untractable, morose, a hater of children. On the other hand, if you find them more than usually engaging,—if you are taken with their pretty manners, and set about in earnest to romp and play with them, some pretext or other is sure to be found for sending them out of the room: they are too noisy or boisterous, or Mr.— does not like children. With one or other of these forks the arrow is sure to hit you.

I could forgive their jealousy, and dispense with toying with their brats, if it gives them any

pain; but I think it unreasonable to be called upon to *love* them, where I see no occasion,—to love a whole family, perhaps, eight, nine, or ten, indiscriminately,—to love all the pretty dears, because children are so engaging.

I know there is a proverb, “Love me, love my dog”: that is not always so very practicable, particularly if the dog be set upon you to tease you or snap at you in sport. But a dog, or a lesser thing,—any inanimate substance, as a keepsake, a watch or a ring, a tree, or the place where we last parted when my friend went away upon a long absence, I can make shift to love, because I love him, and anything that reminds me of him; provided it be in its nature indifferent, and apt to receive whatever hue fancy can give it. But children have a real character and an essential being of themselves: they are amiable or unamiable *per se*; I must love or hate them as I see cause for either in their qualities. A child’s nature is too serious a thing to admit of its being regarded as a mere appendage to another being, and to be loved or hated accordingly: they stand with me upon their own stock, as much as men and women do. O! but you will say, sure it is an attractive age,—there is something in the tender years of infancy that of itself charms us. That is the very reason why I am more nice about them. I know that a sweet child is the sweetest thing in nature, not even excepting the

way of irony: that is, where they find you an object of especial regard with their husband, who is not so easily to be shaken from the lasting attachment founded on esteem which he has conceived towards you; by never-qualified exaggerations to cry up all that you say or do, till the good man, who understands well enough that it is all done in compliment to him, grows weary of the debt of gratitude which is due to so much candour, and by relaxing a little on his part, and taking down a peg or two in his enthusiasm, sinks at length to that kindly level of moderate esteem,—that “decent affection and complacent kindness” towards you, where she herself can join in sympathy with him without much stretch and violence to her sincerity.

Another way (for the ways they have to accomplish so desirable a purpose are infinite) is, with a kind of innocent simplicity, continually to mistake what it was which first made their husband fond of you. If an esteem for something excellent in your moral character was that which riveted the chain she is to break, upon any imaginary discovery of a want of poignancy in your conversation, she will cry, “I thought, my dear, you described your friend, Mr. —, as a great wit.” If, on the other hand, it was for some supposed charm in your conversation that he first grew to like you, and was content for this to overlook some trifling irregularities in

your moral deportment, upon the first notice of any of these she as readily exclaims, "This, my dear, is your good Mr. ———." One good lady whom I took the liberty of expostulating with for not showing me quite so much respect as I thought due to her husband's old friend, had the candour to confess to me that she had often heard Mr. ——— speak of me before marriage, and that she had conceived a great desire to be acquainted with me, but that the sight of me had very much disappointed her expectations; for from her husband's representations of me, she had formed a notion that she was to see a fine, tall, officer-like looking man (I use her very words); the very reverse of which proved to be the truth. This was candid; and I had the civility not to ask her in return, how she came to pitch upon a standard of personal accomplishments for her husband's friends which differed so much from his own; for my friend's dimensions as near as possible approximate to mine; he standing five feet five in his shoes, in which I have the advantage of him by about half an inch; and he no more than myself exhibiting any indications of a martial character in his air or countenance.

These are some of the mortifications which I have encountered in the absurd attempt to visit at their houses. To enumerate them all would be a vain endeavour; I shall therefore just glance at

the very common impropriety of which married ladies are guilty,—of treating us as if we were their husbands, and *vice versâ*. I mean, when they use us with familiarity, and their husbands with ceremony. *Testacea*, for instance, kept me the other night two or three hours beyond my usual time of supping, while she was fretting because Mr. — did not come home, till the oysters were all spoiled, rather than she would be guilty of the impoliteness of touching one in his absence. This was reversing the point of good manners: for ceremony is an invention to take off the uneasy feeling which we derive from knowing ourselves to be less the object of love and esteem with a fellow-creature than some other person is. It endeavours to make up, by superior attentions in little points, for that invidious preference which it is forced to deny in the greater. Had *Testacea* kept the oysters back for me, and withstood her husband's importunities to go to supper, she would have acted according to the strict rules of propriety. I know no ceremony that ladies are bound to observe to their husbands, beyond the point of a modest behaviour and decorum: therefore I must protest against the vicarious gluttony of *Cerasia*, who at her own table sent away a dish of Morellas, which I was applying to with great good will, to her husband at the other end of the table, and recommended a plate of less extraordinary

gooseberries to my unwedded palate in their stead. Neither can I excuse the wanton affront of—

But I am weary of stringing up all my married acquaintance by Roman denominations. Let them amend and change their manners, or I promise to record the full-length English of their names, to the terror of all such desperate offenders in future.

CHARLES LAMB.

## A POT OF HONEY \*

ON my breakfast table there is a pot of honey. Not the manufactured stuff sold under that name in shops, but honey of the hive, brought to me by a neighbouring cottager whose bees often hum in my garden. It gives, I confess, more pleasure to my eye than to my palate; but I like to taste of it, because it is honey.

There is as much difference, said Johnson, between a lettered and an unlettered man as between the living and the dead; and, in a way, it was no extravagance. Think merely how one's view of common things is affected by literary association. What were honey to me if I knew nothing of Hymettus and Hybla?—if my mind had no stores of poetry, no memories of romance? Suppose me town-pent, the name might bring with it some pleasantness of rustic odor; but of what poor significance even that, if the country were to me mere grass and corn and vegetables, as to the man who has never read nor wished to read. For the Poet is indeed a Maker: above the world of sense, trodden by hidebound hu-

\* From "The Private Papers of Henry Ryecroft," by permission of Thomas Bird Mosher, publisher.

manity, he builds that world of his own whereto is summoned the unfettered spirit. Why does it delight me to see the bat flitting at dusk before my window, or to hear the hoot of the owl when all the ways are dark? I might regard the bat with disgust, and the owl either with vague superstition or not heed it at all. But these have their place in the poet's world, and carry me above this idle present.

I once passed a night in a little market-town where I had arrived tired and went to bed early. I slept forthwith, but was presently awakened by I know not what; in the darkness there sounded a sort of music, and, as my brain cleared, I was aware of the soft chiming of church bells. Why, what hour could it be? I struck a light and looked at my watch. Midnight. Then a glow came over me. "We have heard the chimes at midnight, Master Shallow!" Never till then had *I* heard them. And the town in which I slept was Evesham, but a few miles from Stratford-on-Avon. What if those midnight bells had been to me but as any other, and I had reviled them for breaking my sleep?—Johnson did not much exaggerate.

GEORGE GISSING.

## MUSIC

OF late, I have been wishing for music. An odd chance gratified my desire.

I had to go into Exeter yesterday. I got there about sunset, transacted my business, and turned to walk home again through the warm twilight. In Southernhay, as I was passing a house of which the ground-floor windows stood open, there sounded the notes of a piano—chords touched by a skilful hand. I checked my step, hoping, and in a minute or two the musician began to play that nocturne of Chopin which I love best—I don't know how to name it. My heart leapt. There I stood in the thickening dusk, the glorious sounds floating about me; and I trembled with very ecstasy of enjoyment. When silence came, I waited in the hope of another piece, but nothing followed, and so I went my way.

It is well for me that I cannot hear music when I will; assuredly I should not have such intense pleasure as comes to me now and then by hap-hazard. As I walked on, forgetting all about the distance, and reaching home before I knew I was halfway there, I felt gratitude to my un-

known benefactor—a state of mind I have often experienced in the days long gone by. It happened at times—not in my barest days, but in those of decent poverty—that some one in the house where I lodged played the piano—and how it rejoiced me when this came to pass! I say “played the piano”—a phrase that covers much. For my own part, I was very tolerant; anything that could by the largest interpretation be called music, I welcomed and was thankful for; even “five-finger exercises” I found, at moments, better than nothing. For it was when I was labouring at my desk that the notes of the instrument were grateful and helpful to me. Some men, I believe, would have been driven frantic under the circumstances; to me, anything like a musical sound always came as a godsend; it tuned my thoughts; it made the words flow. Even the street organs put me in a happy mood; I owe many a page to them—written when I should else have been sunk in bilious gloom.

More than once, too, when I was walking London streets by night, penniless and miserable, music from an open window has stayed my step, even as yesterday. Very well can I remember such a moment in Eaton Square, one night when I was going back to Chelsea, tired, hungry, racked by frustrated passions. I had tramped miles and miles, in the hope of wearying myself so that I could sleep and forget. Then

came the piano notes—I saw that there was festival in the house—and for an hour or so I revelled as none of the bidden guests could possibly be doing. And when I reached my poor lodgings, I was no longer envious nor mad with desires, but as I fell asleep I thanked the unknown mortal who had played for me, and given me peace.

GEORGE GISSING.

## MONEY

**I**T is a pleasant thing enough to be able to spend a little money without fear when the desire for some indulgence is strong upon one; but how much pleasanter the ability to give money away! Greatly as I relish the comforts of my wonderful new life, no joy it has brought me equals that of coming in aid to another's necessity. The man for ever pinched in circumstances can live only for himself. It is all very well to talk about doing moral good; in practice, there is little scope or hope for anything of that kind in a state of material hardship. To-day I have sent S—— a cheque for fifty pounds; it will come as a very boon of heaven, and assuredly blesseth him that gives as much as him that takes. A poor fifty pounds, which the wealthy fool throws away upon some idle or base fantasy, and never thinks of it; yet to S—— it will mean life and light. And I, to whom this power of benefaction is such a new thing, sign the cheque with a hand trembling, so glad and proud I am. In the days gone by, I have sometimes given money, but with trembling of another kind; it was as likely as not that I myself, some black foggy morn-

ing, might have to go begging for my own dire needs. That is one of the bitter curses of poverty; it leaves no right to be generous. Of my abundance—abundance to me, though starveling pittance in the view of everyday prosperity—I can give with happiest freedom; I feel myself a man, and no crouching slave with his back ever ready for the lash of circumstance. There are those, I know, who thank the gods amiss, and most easily does this happen in the matter of wealth. But oh, how good it is to desire little, and to have a little more than enough!

GEORGE GISSING.

## CONVERSATION

**T**HIS business of conversation is a very serious matter. There are men that it weakens one to talk with an hour more than a day's fasting would do. Mark this that I am going to say, for it is as good as a working professional man's advice, and costs you nothing: it is better to lose a pint of blood from your veins than to have a nerve tapped. Nobody measures your nervous force as it runs away, nor bandages your brain and marrow after the operation.

There are men of *esprit* who are excessively exhausting to some people. They are the talkers who have what may be called *jerky* minds. Their thoughts do not run in the natural order of sequence. They say bright things on all possible subjects, but their zigzags rack you to death. After a jolting half-hour with one of these jerky companions, talking with a dull friend affords great relief. It is like taking the cat in your lap after holding a squirrel.

What a comfort a dull but kindly person is, to be sure, at times! A ground-glass shade over a gas-lamp does not bring more solace to our dazzled eyes than such a one to our minds.

—You don't suppose that my remarks made at this table are like so many postage-stamps, do you,—each to be only once uttered? If you do, you are mistaken. He must be a poor creature that does not often repeat himself. Imagine the author of the excellent piece of advice, "Know thyself," never alluding to that sentiment again during the course of a protracted existence! Why, the truths a man carries about with him are his tools; and do you think a carpenter is bound to use the same plane but once to smooth a knotty board with, or to hang up his hammer after it has driven its first nail? I shall never repeat a conversation, but an idea often. I shall use the same types when I like, but not commonly the same stereotypes. A thought is often original, though you have uttered it a hundred times. It has come to you over a new route, by a new and express train of associations.

Sometimes, but rarely, one may be caught making the same speech twice over, and yet be held blameless. Thus, a certain lecturer, after performing in an inland city, where dwells a *Littératrice* of note, was invited to meet her and others over the social teacup. She pleasantly referred to his many wanderings in his new occupation. "Yes," he replied, "I am like the Huma, the bird that never lights, being always in the cars, as he is always on the wing."—Years elapsed. The lecturer visited the same place once

more for the same purpose. Another social cup after the lecture, and a second meeting with the distinguished lady. "You are constantly going from place to place," she said.—"Yes," he answered, "I am like the Huma," and finished the sentence as before.

What horrors, when it flashed over him that he had made this fine speech, word for word, twice over! Yet it was not true, as the lady might perhaps have fairly inferred, that he had embellished his conversation with the Huma daily during that whole interval of years. On the contrary, he had never once thought of the odious fowl until the recurrence of precisely the same circumstances brought up precisely the same idea. He ought to have been proud of the accuracy of his mental adjustments. Given certain factors, and a sound brain should always evolve the same fixed product with the certainty of Babbage's calculating machine.

—What are the great faults of conversation? Want of ideas, want of words, want of manners, are the principal ones, I suppose you think. I don't doubt it, but I will tell you what I have found spoil more good talks than anything else;—long arguments on special points between people who differ on the fundamental principles upon which these points depend. No men can

have satisfactory relations with each other until they have agreed on certain *ultimata* of belief not be disturbed in ordinary conversation, and unless they have sense enough to trace the secondary questions depending upon these ultimate beliefs to their source. In short, just as a written constitution is essential to the best social order, so a code of finalities is a necessary condition of profitable talk between two persons. Talking is like playing on the harp; there is as much in laying the hand on the strings to stop their vibrations as in twanging them to bring out their music.

I really believe some people save their bright thoughts, as being too precious for conversation. What do you think an admiring friend said the other day to one that was talking good things,—good enough to print? “Why,” said he, “you are wasting merchantable literature, a cash article, at the rate, as nearly as I can tell, of fifty dollars an hour.” The talker took him to the window and asked him to look out and tell what he saw.

“Nothing but a very dusty street,” he said, “and a man driving a sprinkling-machine through it.”

“Why don’t you tell the man he is wasting that water? What would be the state of the

highways of life, if we did not drive our *thought-sprinklers* through them with the valves open, sometimes?

"Besides, there is another thing about this talking, which you forgot. It shapes our thoughts for us;—the waves of conversation roll them as the surf rolls the pebbles on the shore. Let me modify the image a little. I rough out my thoughts in talk as an artist models in clay. Spoken language is so plastic,—you can pat and coax, and spread and shave, and rub out, and fill up, and stick on so easily, when you work that soft material, that there is nothing like it for modelling. Out of it come the shapes which you turn into marble or bronze in your immortal books, if you happen to write such. Or, to use another illustration, writing or printing is like shooting with a rifle; you may hit your reader's mind, or miss it;—but talking is like playing at a mark with the pipe of an engine; if it is within reach, and you have time enough, you can't help hitting it."

—How sweetly and honestly one said to me the other day, "I hate books!" A gentleman,—singularly free from affectations,—not learned, of course, but of perfect breeding, which is often so much better than learning,—by no means dull, in the sense of knowledge of the world and society, but certainly not clever either in the arts or

sciences,—his company is pleasing to all who know him. I did not recognize in him inferiority of literary taste half so distinctly as I did simplicity of character and fearless acknowledgment of his inaptitude for scholarship. In fact, I think there are a great many gentlemen and others, who read with a mark to keep their place, that really “hate books,” but never had the wit to find it out, or the manliness to own it. [*Entre nous*, I always read with a mark.]

We get into a way of thinking as if what we call an “intellectual man” was, as a matter of course, made up of nine-tenths, or thereabouts, of book-learning, and one-tenth himself. But even if he is actually so compounded, he need not read much. Society is a strong solution of books. It draws the virtue out of what is best worth reading, as hot water draws the strength of tea-leaves. If I were a prince, I would hire or buy a private literary tea-pot, in which I would steep all the leaves of new books that promised well. The infusion would do for me without the vegetable fibre. You understand me; I would have a person whose sole business should be to read day and night, and talk to me whenever I wanted him to. I know the man I would have: a quick-witted, out-spoken, incisive fellow; knows history, or at any rate has a shelf full of books about it, which he can use handily, and the same of all useful arts and sciences; knows all the common

plots of plays and novels, and the stock company of characters that are continually coming on in new costume; can give you a criticism of an octavo in an epithet and a wink, and you can depend on it; cares for nobody except for the virtue there is in what he says; delights in taking off big wigs and professional gowns, and in the disembalming and unbandaging of all literary mummies. Yet he is as tender and reverential to all that bears the mark of genius,—that is, of a new influx of truth or beauty,—as a nun over her missal. In short, he is one of those men that know everything except how to make a living. Him would I keep on the square next my own royal compartment on life's chessboard. To him I would push up another pawn, in the shape of a comely and wise young woman, whom he would of course take—to wife. For all contingencies I would liberally provide. In a word, I would, in the plebeian, but expressive phrase, “put him through” all the material part of life; see him sheltered, warmed, fed, button-mended, and all that, just to be able to lay on his talk when I liked,—with the privilege of shutting it off at will.

A Club is the next best thing to this, strung like a harp, with about a dozen ringing intelligences, each answering to some chord of the macrocosm. They do well to dine together once in a while. A dinner-party made up of such elements

is the last triumph of civilization over barbarism. Nature and art combine to charm the senses; the equatorial zone of the system is soothed by well-studied artifices; the faculties are off duty, and fall into their natural attitudes; you see wisdom in slippers and science in a short jacket.

The whole force of conversation depends on how much you can take for granted. Vulgar chess-players have to play their game out; nothing short of the brutality of an actual checkmate satisfies their dull apprehensions. But look at two masters of that noble game! White stands well enough, so far as you can see; but Red says, Mate in six moves;—White looks,—nods,—the game is over. Just so in talking with first-rate men; especially when they are good-natured and expansive, as they are apt to be at table. That blessed clairvoyance which sees into things without opening them,—that glorious licence, which, having shut the door and driven the reporter from its key-hole, calls upon Truth, majestic virgin! to get off from her pedestal and drop her academic poses, and take a festive garland and the vacant place on the *medius lectus*,—that carnival-shower of questions and replies and comments, large axioms bowled over the mahogany like bomb-shells from professional mortars, and explosive wit dropping its trains of many-coloured fire, and the mischief-making rain of *bon-bons* pelting everybody that shows himself,—the picture

of a truly intellectual banquet is one which the old Divinities might well have attempted to reproduce.

—It is a fine thing to be an oracle to which an appeal is always made in all discussions. The men of facts wait their turn in grim silence, with that slight tension about the nostrils which the consciousness of carrying a “settler” in the form of a fact or a revolver gives the individual thus armed. When a person is really full of information, and does not abuse it to crush conversation, his part is to that of the real talkers what the instrumental accompaniment is in a trio or quartette of vocalists.

—What do I mean by the real talkers?—Why, the people with fresh ideas, of course, and plenty of good warm words to dress them in. Facts always yield the place of honour, in conversation, to thoughts about facts; but if a false note is uttered, down comes the finger on the key and the man of facts asserts his true dignity. I have known three of these men of facts, at least, who were always formidable,—and one of them was tyrannical.

—Yes, a man sometimes makes a grand appearance on a particular occasion; but these men knew something about almost everything, and never made mistakes.—He? *Veneers* in first-rate style. The mahogany scales off now and then in

spots, and then you see the cheap light stuff.—I found — very fine in conversational information, the other day when we were in company. The talk ran upon mountains. He was wonderfully well acquainted with the leading facts about the Andes, the Apennines, and the Appalachians; he had nothing in particular to say about Ararat, Ben Nevis, and various other mountains that were mentioned. By-and-by some Revolutionary anecdote came up, and he showed singular familiarity with the lives of the Adamses, and gave many details relating to Major André. A point of Natural History being suggested, he gave an excellent account of the air-bladder of fishes. He was very full upon the subject of agriculture, but retired from the conversation when horticulture was introduced in the discussion. So he seemed well acquainted with the geology of anthracite, but did not pretend to know anything of other kinds of coal. There was something so odd about the extent and limitations of his knowledge, that I suspected all at once what might be the meaning of it, and waited till I got an opportunity.—Have you seen the “New American Cyclopædia?” said I.—I have, he replied; I received an early copy.—How far does it go?—He turned red, and answered,—To Araguay.—Oh, said I to myself,—not quite so far as Ararat;—that is the reason he knew nothing about it; but he must have read all the rest

straight through, and, if he can remember what is in this volume until he has read all those that are to come, he will know more than I ever thought he would.

OLIVER WENDELL HOLMES.

Breakfast Table."

## TOUCH

**A** CHILD is smaller than a man; he has not the man's strength or reason, but he sees and hears as well or nearly as well; his sense of taste is very good, though he is less fastidious, and he distinguishes scents as clearly though less sensuously. The senses are the first of our faculties to mature; they are those most frequently overlooked or neglected.

To train the senses it is not enough merely to use them; we must learn to judge by their means, to learn to feel, so to speak; for we cannot touch, see, or hear, except as we have been taught.

There is a mere natural and mechanical use of the senses which strengthens the body without improving the judgment. It is all very well to swim, run, jump, whip a top, throw stones; but have we nothing but arms and legs? Have we not eyes and ears as well; and are not these organs necessary for the use of the rest? Do not merely exercise the strength, exercise all the senses by which it is guided; make the best use of every one of them, and check the results of one by the other. Measure, count, weigh, compare. Do not use force till you have estimated the resistance;

let the estimation of the effect always precede the application of the means. Get the child interested in avoiding insufficient or superfluous efforts. If in this way you train him to calculate the effects of all his movements, and to correct his mistakes by experience, is it not clear that the more he does the wiser he will become?

Take the case of moving a heavy mass; if he takes too long a lever, he will waste his strength; if it is too short, he will not have strength enough; experience will teach him to use the very stick he needs. This knowledge is not beyond his years. Take, for example, a load to be carried; if he wants to carry as much as he can, and not to take up more than he can carry, must he not calculate the weight by the appearance? Does he know how to compare masses of like substance and different size, or to choose between masses of the same size and different substances? he must set to work to compare their specific weights. I have seen a young man, very highly educated, who could not be convinced, till he had tried it, that a bucket full of blocks of oak weighed less than the same bucket full of water.

All our senses are not equally under our control. One of them, touch, is always busy during our waking hours; it is spread over the whole surface of the body, like a sentinel ever on the watch to warn us of anything which may do us harm. Whether we will or not, we learn to use

it first of all by experience, by constant practice, and therefore we have less need for special training for it. Yet we know that the blind have a surer and more delicate sense of touch than we, for not being guided by the one sense, they are forced to get from the touch what we get from sight. Why, then, are not we trained to walk as they do in the dark, to recognize what we touch, to distinguish things about us; in a word, to do at night and in the dark what they do in the daytime without sight? We are better off than they while the sun shines; in the dark it is their turn to be our guide. We are blind half our time, with this difference: the really blind always know what to do, while we are afraid to stir in the dark. We have lights, you say. What! always artificial aids. Who can insure that they will always be at hand when required. I had rather Emil's eyes were in his finger tips, than in the chandler's shop.

If you are shut up in a building at night, clap your hands, you will know from the sound whether the space is large or small, if you are in the middle or in one corner. Half a foot from a wall the air, which is refracted and does not circulate freely, produces a different effect on your face. Stand still in one place and turn this way and that; a slight draught will tell you if there is a door open. If you are on a boat you will perceive from the way the air strikes your

face not merely the direction in which you are going, but whether the current is bearing you slow or fast. These observations and many others like them can only be properly made at night; however much attention we give to them by daylight, we are always helped or hindered by sight, so that the results escape us. Yet here we use neither hand nor stick. How much may be learnt by touch, without ever touching anything!

I would have plenty of games in the dark! This suggestion is more valuable than it seems at first sight. Men are naturally afraid of the dark; so are some animals.\* Only a few men are freed from this burden by knowledge, determination, and courage. I have seen thinkers, unbelievers, philosophers, exceedingly brave by daylight, tremble like women at the rustling of a leaf in the dark. This terror is put down to nurses' tales; this is a mistake; it has a natural cause. What is this cause? What makes the deaf suspicious and the lower classes superstitious? Ignorance of the things about us, and of what is taking place around us.† Accustomed to perceive

\* This terror is very noticeable during great eclipses of the sun.

† Another cause has been well explained by a philosopher, often quoted in this work, a philosopher to whose wide views I am very greatly indebted.

"When under special conditions we cannot form a fair idea of distance, when we can only judge things

things from a distance and to calculate their effects, how can I help supposing, when I cannot see, that there are hosts of creatures and all sorts of movements all about me which may do me harm, and against which I cannot protect myself? In vain do I know I am safe where I am; I am never so sure of it as when I can actually see it, so that I have always a cause for fear which did not exist in broad daylight. I know, indeed, that a foreign body can scarcely act upon me without some slight sound, and how intently I listen! At the least sound which I cannot explain, the desire of self-preservation makes me picture everything that would put me on my guard, and therefore everything most calculated to alarm me.

by the size of the angle or rather of the image formed in our eyes, we cannot avoid being deceived as to the size of these objects. Every one knows by experience how when we are travelling at night we take a bush near at hand for a great tree at a distance, and *vice versa*. In the same way, if the objects were of a shape unknown to us, so that we could not tell their size in that way, we should be equally mistaken with regard to it. If a fly flew quickly past a few inches from our eyes, we should think it was a distant bird; a horse standing still at a distance from us in the midst of open country, in a position somewhat like that of a sheep, would be taken for a large sheep, so long as we did not perceive that it was a horse; but as soon as we recognize what it is, it seems as large as a horse, and we at once correct our former judgment.

“Whenever one finds oneself in unknown places at night where we cannot judge of distance, and where

I am just as uneasy if I hear no sound, for I might be taken unawares without a sound. I must picture things as they were before, as they ought to be; I must see what I do not see. Thus driven to exercise my imagination, it soon becomes my master, and what I did to reassure myself only alarms me more. I hear a noise, it is a robber; I hear nothing, it is a ghost. The watchfulness inspired by the instinct of self-preservation only makes me more afraid. Everything that ought to reassure me exists only for my reason, and the voice of instinct is louder than that of reason. What is the good of thinking there is nothing to be afraid of, since in that case there is nothing we can do?

we cannot recognize objects by their shape on account of the darkness, we are in constant danger of forming mistaken judgments as to the objects which present themselves to our notice. Hence that terror, that kind of inward fear experienced by most people on dark nights. This is foundation for the supposed appearances of spectres, or gigantic and terrible forms which so many people profess to have seen. They are generally told that they imagined these things, yet they may really have seen them, and it is quite possible they really saw what they say they did see; for it will always be the case that when we can only estimate the size of an object by the angle it forms in the eye, that object will swell and grow as we approach it; and if the spectator thought it several feet high when it was thirty or forty feet away, it will seem very large indeed when it is a few feet off; this must indeed astonish and alarm the spectator until he touches it and perceives what it is, for as soon as he perceives what it is, the object

The cause indicates the cure. In everything habit overpowers imagination; it is only aroused by what is new. It is no longer imagination, but memory which is concerned with what we see every day, and that is the reason of the maxim, "*Ab assuetis non fit passio*," for it is only at the flame of imagination that the passions are kindled. Therefore do not argue with anyone whom you want to cure of the fear of darkness; take him often into dark places and be assured this practice will be of more avail than all the arguments of philosophy. The tiler on the roof does

which seemed so gigantic will suddenly shrink and assume its real size, but if we run away or are afraid to approach, we shall certainly form no other idea of the thing than the image formed in the eye, and we shall have really seen a gigantic figure of alarming size and shape. There is, therefore, a natural ground for the tendency to see ghosts, and these appearances are not merely the creation of the imagination, as the men of science would have us think."—Buffon, *Nat. Hist.*

In the text I have tried to show that they are always partly the creation of the imagination, and with regard to the cause explained in this quotation, it is clear that the habit of walking by night should teach us to distinguish those appearances which similarity of form and diversity of distance lend to the objects seen in the dark. For if the air is light enough for us to see the outlines there must be more air between us and them when they are further off, so that we ought to see them less distinctly when further off, which should be enough, when we are used to it, to prevent the error described by M. Buffon. Whichever explanation you prefer, my mode of procedure is still efficacious, and experience entirely confirms it.

not know what it is to be dizzy, and those who are used to the dark will not be afraid.

There is another advantage to be gained from our games in the dark. If these games are to be a success I cannot speak too strongly of the need for gaiety. Nothing is so gloomy as the dark; do not shut your child up in a dungeon, let him laugh when he goes into a dark place, let him laugh when he comes out, so that the thought of the game he is leaving and the games he will play next may protect him from the fantastic imagination which might lay hold on him.

There comes a stage in life beyond which we progress backwards. I feel I have reached this stage. I am, so to speak, returning to a past career. The approach of age makes us recall the happy days of our childhood. As I grow old I become a child again, and I recall more readily what I did at ten than at thirty. Reader, forgive me if I sometimes draw my examples from my own experience. If this book is to be well written, I must enjoy writing it.

I was living in the country with a pastor called M. Lambercier. My companion was a cousin richer than myself, who was regarded as the heir to some property, while I, far from my father, was but a poor orphan. My big cousin Bernard was unusually timid, especially at night. I laughed at his fears, till M. Lambercier was tired of my boasting, and determined to put my courage to

the proof. One autumn evening, when it was very dark, he gave me the church key, and told me to go and fetch a Bible he had left in the pulpit. To put me on my mettle he said something which made it impossible for me to refuse.

I set out without a light; if I had had one, it would perhaps have been even worse. I had to pass through the graveyard; I crossed it bravely, for as long as I was in the open air I was never afraid of the dark.

As I opened the door I heard a sort of echo in the roof; it sounded like voices and it began to shake my Roman courage. Having opened the door I tried to enter, but when I had gone a few steps I stopped. At the sight of the profound darkness in which the vast building lay I was seized with terror and my hair stood on end. I turned, I went out through the door, and took to my heels. In the yard I found a little dog, called Sultan, whose caresses reassured me. Ashamed of my fears, I retraced my steps, trying to take Sultan with me, but he refused to follow. Hurriedly I opened the door and entered the church. I was hardly inside when terror again got hold of me and so firmly that I lost my head, and though the pulpit was on the right, as I very well knew, I sought it on the left, and entangling myself among the benches I was completely lost. Unable to find either pulpit or door, I fell into an indescribable state of mind. At last

I found the door and managed to get out of the church and run away as I had done before, quite determined never to enter the church again except in broad daylight.

I returned to the house; on the doorstep I heard M. Lambercier laughing, laughing, as I supposed, at me. Ashamed to face his laughter, I was hesitating to open the door, when I heard Miss Lambercier, who was anxious about me, tell the maid to get the lantern, and M. Lambercier got ready to come and look for me, escorted by my gallant cousin, who would have got all the credit for the expedition. All at once my fears departed, and left me merely surprised at my terror. I ran, I fairly flew, to the church; without losing my way, without groping about, I reached the pulpit, took the Bible, and ran down the steps. In three strides I was out of the church, leaving the door open. Breathless, I entered the room and threw the Bible on the table, frightened indeed, but throbbing with pride that I had done it without the proposed assistance.

You will ask if I am giving this anecdote as an example, and as an illustration, of the mirth which I say should accompany these games. Not so, but I give it as a proof that there is nothing so well calculated to reassure anyone who is afraid in the dark as to hear sounds of laughter and talking in an adjoining room. Instead of

playing alone with your pupil in the evening, I would have you get together a number of merry children; do not send them alone to begin with, but several together, and do not venture to send anyone quite alone, until you are quite certain beforehand that he will not be too frightened.

I can picture nothing more amusing and more profitable than such games, considering how little skill is required to organize them. In a large room I should arrange a sort of labyrinth of tables, armchairs, and screens. In the inextricable windings of this labyrinth I should place some eight or ten sham boxes, and one real box almost exactly like them, but well filled with sweets. I should describe clearly and briefly the place where the right box would be found. I should give instructions sufficient to enable people more attentive and less excitable than children to find it.\* Then having made the little competitors draw lots, I should send first one and then another till the right box was found. I should increase the difficulty of the task in proportion to their skill.

Picture to yourself a youthful Hercules returning, box in hand, quite proud of his expedition. The box is placed on the table and opened

\*To practise them in attention, only tell them things which it is clearly to their present interest that they should understand thoroughly; above all be brief, never say a word more than is necessary. But neither let your speech be obscure nor of doubtful meaning.

with great ceremony. I can hear the bursts of laughter and the shouts of the merry party when, instead of the looked-for sweets, he finds, neatly arranged on moss or cotton-wool, a beetle, a snail, a bit of coal, a few acorns, a turnip, or some such thing. Another time in a newly white-washed room, a toy or some small article of furniture would be hung on the wall and the children would have to fetch it without touching the wall. When the child who fetches it comes back, if he has failed ever so little to fulfil the conditions, a dab of white on the brim of his cap, the tip of his shoe, the flap of his coat or his sleeve, will betray his lack of skill.

This is enough, or more than enough, to show the spirit of these games. Do not read my book if you expect me to tell you everything.

What great advantages would be possessed by a man so educated, when compared with others. His feet are accustomed to tread firmly in the dark, and his hands to touch lightly; they will guide him safely in the thickest darkness. His imagination is busy with the evening games of his childhood, and will find it difficult to turn towards objects of alarm. If he thinks he hears laughter, it will be the laughter of his former playfellows, not of frenzied spirits; if he thinks there is a host of people, it will not be the 'witches' sabbath, but the party in his tutor's study. Night only recalls these cheerful memories, and it will

never alarm him; it will inspire delight rather than fear. He will be ready for a military expedition at any hour, with or without his troop. He will enter the camp of Saul, he will find his way, he will reach the king's tent without waking any one, and he will return unobserved. Are the steeds of Rhesus to be stolen, you may trust him. You will scarcely find a Ulysses among men educated in any other fashion.

I have known people who tried to train the children not to fear the dark by startling them. This is a very bad plan; its effects are just the opposite of those desired, and it only makes children more timid. Neither reason nor habit can secure us from the fear of a present danger whose degree and kind are unknown, nor from the fear of surprises which we have often experienced. Yet how will you make sure that you can preserve your pupil from such accidents? I consider this the best advice to give him beforehand. I should say to Emile, "This is a matter of self-defence, for the aggressor does not let you know whether he means to hurt or frighten you, and as the advantage is on his side you cannot even take refuge in flight. Therefore seize boldly anything, whether man or beast, which takes you unawares in the dark. Grasp it, squeeze it with all your might; if it struggles, strike, and do not spare your blows; and whatever he may say or do, do not let him go till you know just who

he is. The event will probably prove that you had little to be afraid of, but this way of treating practical jokers would naturally prevent their trying it again.

Although touch is the sense oftenest used, its discrimination remains, as I have already pointed out, coarser and more imperfect than that of any other sense, because we always use sight along with it; the eye perceives the thing first, and the mind almost always judges without the hand. On the other hand, discrimination by touch is the surest just because of its limitations; for extending only as far as our hands can reach, it corrects the hasty judgments of the other senses, which pounce upon objects scarcely perceived, while what we learn by touch is learnt thoroughly. Moreover, touch, when required, unites the force of our muscles to the action of the nerves; we associate by simultaneous sensations our ideas of temperature, size, and shape, to those of weight and density. Thus touch is the sense which best teaches us the action of foreign bodies upon ourselves, the sense which most directly supplies us with the knowledge required for self-preservation.

As the trained touch takes the place of sight, why should it not, to some extent, take the place of hearing, since sounds set up, in sonorous bodies, vibrations perceptible by touch? By placing the hand on the body of a 'cello one can distinguish

without the use of eye or ear, merely by the way in which the wood vibrates and trembles, whether the sound given out is sharp or flat, whether it is drawn from the treble string or the base. If our touch were trained to note these differences, no doubt we might in time become so sensitive as to hear a whole tune by means of our fingers. But if we admit this, it is clear that one could easily speak to the deaf by means of music; for tone and measure are no less capable of regular combination than voice and articulation, so that they might be used as the elements of speech.

There are exercises by which the sense of touch is blunted and deadened, and others which sharpen it and make it delicate and discriminating. The former, which employ much movement and force for the continued impression of hard bodies, make the skin hard and thick, and deprive it of its natural sensitiveness. The latter are those which give variety to this feeling, by slight and repeated contact, so that the mind is attentive to constantly recurring impressions, and readily learns to discern their variations. This difference is clear in the use of musical instruments. The harsh and painful touch of the 'cello, bass-viol, and even of the violin, hardens the fingertips, although it gives flexibility to the fingers. The soft and smooth touch of the harpsichord makes the fingers both flexible and sensitive. In this respect the harpsichord is to be preferred.

The skin protects the rest of the body, so it is very important to harden it to the effects of the air that it may be able to bear its changes. With regard to this I may say I would not have the hand roughened by too servile application to the same kind of work, nor should the skin of the hand become hardened so as to lose its delicate sense of touch which keeps the body informed of what is going on, and by the kind of contact sometimes makes us shudder in different ways even in the dark.

Why should my pupil be always compelled to wear the skin of an ox under his foot? What harm would come of it if his own skin could serve him at need as a sole. It is clear that a delicate skin could never be of any use in this way, and may often do harm. The Genevese, aroused at midnight by their enemies in the depth of winter, seized their guns rather than their shoes. Who can tell whether the town would have escaped capture if its citizens had not been able to go barefoot?

Let a man be always fore-armed against the unforeseen. Let Emile run about barefoot all the year round, upstairs, downstairs, and in the garden. Far from scolding him, I shall follow his example; only I shall be careful to remove any broken glass. I shall soon proceed to speak of work and manual occupations. Meanwhile, let him learn to perform every exercise which

encourages agility of body; let him learn to hold himself easily and steadily in any position, let him practise jumping and leaping, climbing trees and walls. Let him always find his balance, and let his every movement and gesture be regulated by the laws of weight, long before he learns to explain them by the science of statics. By the way his foot is planted on the ground, and his body supported on his leg, he ought to know if he is holding himself well or ill. An easy carriage is always graceful, and the steadiest positions are the most elegant. If I were a dancing master I would refuse to play the monkey tricks of Marcel, which are only fit for the stage where they are performed; but instead of keeping my pupil busy with fancy steps, I would take him to the foot of a cliff. There I would show him how to hold himself, how to carry his body and head, how to place first a foot then a hand, to follow lightly the steep, toilsome, and rugged paths, to leap from point to point, either up or down. He should emulate the mountain-goat, not the ballet dancer.

JEAN JACQUES ROUSSEAU.

## ON WOMEN

SCHILLER'S poem in honor of women, "Würde der Frauen," is the result of much careful thought, and it appeals to the reader by its antithetic style and its use of contrast; but as an expression of the true praise which should be accorded to them, it is, I think, inferior to these few words of Jouy's: "Without women, the beginning of our life would be helpless; the middle, devoid of pleasure; and the end, of consolation." The same thing is more feelingly expressed by Byron in "Sardanapalus":

"The very first  
Of human life must spring from woman's breast,  
Your first small words are taught you from her  
lips,  
Your first tears quench'd by her, and your last  
sighs  
Too often breathed out in a woman's hearing,  
When men have shrunk from the ignoble care  
Of watching the last hour of him who led them."  
(Act I. Scene 2.)

These two passages indicate the right standpoint for the appreciation of women.

You need only look at the way in which she is formed, to see that woman is not meant to undergo great labour, whether of the mind or of the body. She pays the debt of life not by what she does, but by what she suffers; by the pains of child-bearing and care for the child, and by submission to her husband, to whom she should be a patient and cheering companion. The keenest sorrows and joys are not for her, nor is she called upon to display a great deal of strength. The current of her life, should be more gentle, peaceful and trivial than man's, without being essentially happier or unhappier.

Women are directly fitted for acting as the nurses and teachers of our early childhood by the fact that they are themselves childish, frivolous and short-sighted; in a word, they are big children all their life long—a kind of intermediate stage between the child and the full-grown man, who is man in the strict sense of the word. See how a girl will fondle a child for days together, dance with it and sing to it; and then think what a man, with the best will in the world, could do if he were put in her place.

With young girls nature seems to have had in view what, in the language of the drama, is called a striking effect; as for a few years she dowers them with a wealth of beauty and is lavish in her gift of charm, at the expense of all the rest of their life; so that during those years

they may capture the fantasy of some man to such a degree, that he is hurried away into undertaking the honourable care of them, in some form or other, as long as they live—a step for which there would not appear to be any sufficient warranty if reason only directed his thoughts. Accordingly, Nature has equipped woman, as she does all her creatures, with the weapons and implements requisite for the safeguarding of her existence, and for just as long as it is necessary for her to have them. Here, as elsewhere, Nature proceeds with her usual economy; for just as the female ant, after fecundation, loses her wings, which are then superfluous, nay, actually a danger to the business of breeding; so, after giving birth to one or two children, a woman generally loses her beauty; probably, indeed, for similar reasons.

And so we find that young girls, in their hearts, look upon domestic affairs or work of any kind as of secondary importance, if not actually as a mere jest. The only business that really claims their earnest attention is love, making conquests, and everything connected with this—dress, dancing, and so on.

The nobler and more perfect a thing is, the later and slower it is in arriving at maturity. A man reaches the maturity of his reasoning powers and mental faculties hardly before the age of twenty-eight; a woman, at eighteen. And then, too, in the case of woman, it is only reason

of a sort—very niggard in its dimensions. That is why women remain children their whole life long; never seeing anything but what is quite close to them, cleaving to the present moment, taking appearance for reality, and preferring trifles to matters of the first importance. For it is by virtue of his reasoning faculty that man does not live in the present only, like the brute, but looks about him and considers the past and the future; and this is the origin of prudence, as well as of that care and anxiety which so many people exhibit. Both the advantages and the disadvantages which this involves, are shared in by the woman to a smaller extent because of her weaker power of reasoning. She may, in fact, be described as intellectually shortsighted, because, while she has an intuitive understanding of what lies quite close to her, her field of vision is narrow and does not reach to what is remote: so that things which are absent, or past, or to come, have much less effect upon women than upon men. This is the reason why women are more often inclined to be extravagant, and sometimes carry their inclination to a length that borders upon madness. In their hearts women think that it is men's business to earn money and theirs to spend it—if possible during their husband's life, but, at any rate, after his death. The very fact that their husband hands them over his earnings for purposes of housekeeping, strengthens them in this belief.

However many disadvantages all this may involve, there is at least this to be said in its favour; that the woman lives more in the present than the man, and that, if the present is at all tolerable, she enjoys it more eagerly. This is the source of that cheerfulness which is peculiar to woman, fitting her to amuse man in his hours of recreation, and, in case of need, to console him when he is borne down by the weight of his cares.

It is by no means a bad plan to consult women in matters of difficulty, as the Germans used to do in ancient times; for their way of looking at things is quite different from ours, chiefly in the fact that they like to take the shortest way to their goal, and, in general, manage to fix their eyes upon what lies before them; while we, as a rule, see far beyond it, just because it is in front of our noses. In cases like this, we need to be brought back to the right standpoint, so as to recover the near and simple view.

Then, again, women are decidedly more sober in their judgment than we are, so that they do not see more in things than is really there; while, if our passions are aroused, we are apt to see things in an exaggerated way, or imagine what does not exist.

The weakness of their reasoning faculty also explains why it is that women show more sympathy for the unfortunate than men do, and so treat them with more kindness and interest; and

why it is that, on the contrary, they are inferior to men in point of justice, and less honourable and conscientious. For it is just because their reasoning power is weak that present circumstances have such a hold over them, and those concrete things which lie directly before their eyes exercise a power which is seldom counteracted to any extent by abstract principles of thought, by fixed rules of conduct, firm resolutions, or in general, by consideration for the past and the future, or regard for what is absent and remote. Accordingly, they possess the first and main elements that go to make a virtuous character, but they are deficient in those secondary qualities which are often a necessary instrument in the formation of it.\*

Hence it will be found that the fundamental fault of the female character is that it has no sense of justice. This is mainly due to the fact, already mentioned, that women are defective in the powers of reasoning and deliberation; but it is also traceable to the position which Nature has assigned to them as the weaker sex. They are dependent, not upon strength, but upon craft; and hence their instinctive capacity for cunning, and their ineradicable tendency to say what is not true. For as lions are provided with claws and

\*In this respect they may be compared to an animal organism which contains a liver but no gall-bladder. Here let me refer to what I have said in my treatise on "The Foundation of Morals," § 17.

teeth, and elephants and boars with tusks, bulls with horns, and the cuttle fish with its cloud of inky fluid, so Nature has equipped woman, for her defence and protection, with the arts of dissimulation; and all the power which Nature has conferred upon man in the shape of physical strength and reason, has been bestowed upon women in this form. Hence dissimulation is innate in woman, and almost as much a quality of the stupid as of the clever. It is as natural for them to make use of it on every occasion as it is for those animals to employ their means of defence when they are attacked; they have a feeling that in doing so they are only within their rights. Therefore a woman who is perfectly truthful and not given to dissimulation is perhaps an impossibility, and for this very reason they are so quick at seeing through dissimulation in others that it is not a wise thing to attempt it with them. But this fundamental defect which I have stated, with all that it entails, gives rise to falsity, faithlessness, treachery, ingratitude, and so on. Perjury in a court of justice is more often committed by women than by men. It may, indeed, be generally questioned whether women ought to be sworn at all. From time to time one finds repeated cases everywhere of ladies, who want for nothing, taking things from shop-counters, when no one is looking, and making off with them.

Nature has appointed that the propagation of

the species shall be the business of men who are young, strong and handsome; so that the race may not degenerate. This is the firm will and purpose of Nature in regard to the species, and it finds its expression in the passions of women. There is no law that is older or more powerful than this. Woe, then, to the man who sets up claims and interests that will conflict with it; whatever he may say and do, they will be unmercifully crushed at the first serious encounter. For the innate rule that governs women's conduct, though it is secret and unformulated, nay, unconscious in its working, is this: "We are justified in deceiving those who think they have acquired rights over the species by paying little attention to the individual, that is, to us. The constitution and, therefore, the welfare of the species have been placed in our hands and committed to our care, through the control we obtain over the next generation, which proceeds from us; let us discharge our duties conscientiously." But women have no abstract knowledge of this leading principle; they are conscious of it only as a concrete fact; and they have no other method of giving expression to it than the way in which they act when the opportunity arrives. And then their conscience does not trouble them so much as we fancy; for in the darkest recesses of their heart, they are aware that in committing a breach of their duty toward the in-

dividual, they have all the better fulfilled their duty towards the species, which is infinitely greater.\*

And since women exist in the main solely for the propagation of the species, and are not destined for anything else, they live, as a rule, more for the species than for the individual, and in their hearts take the affairs of the species more seriously than those of the individual. This gives their whole life and being a certain levity; the general bent of their character is in a direction fundamentally different from that of man; and it is this which produces that discord in married life which is so frequent, and almost the normal state.

The natural feeling between men is mere indifference, but between women it is actual enmity. The reason of this is that trade-jealousy—*odium figulinum*—which, in the case of men, does not go beyond the confines of their own particular pursuit; but, with women, embraces the whole sex; since they have only one kind of business. Even when they meet in the street, women look at one another like Guelphs and Ghibellines. And it is a patent fact that when two women make first acquaintance with each other, they behave with more constraint and dis-

\* A more detailed discussion of the matter in question may be found in my chief work, "Die Welt als Wille und Vorstellung," vol. ii., ch. 44.

simulation than two men would show in a like case; and hence it is that an exchange of compliments between two women is a much more ridiculous proceeding than between two men. Further, while a man will, as a general rule, always preserve a certain amount of consideration and humanity in speaking to others, even to those who are in a very inferior position, it is intolerable to see how proudly and disdainfully a fine lady will generally behave toward one who is in a lower social rank (I do not mean a woman who is in her service), whenever she speaks to her. The reason of this may be that, with women, differences of rank are much more precarious than with us; because, while a hundred considerations carry weight in our case, in theirs there is only one, namely, with which man they have found favour; as also that they stand in much nearer relations with one another than men do, in consequence of the one-sided nature of their calling. This makes them endeavour to lay stress upon differences of rank.

It is only the man whose intellect is clouded by his sexual impulses that could give the name of the fair sex to that undersized, narrow-shouldered, broad-hipped, and short-legged race; for the whole beauty of the sex is bound up with this impulse. Instead of calling them beautiful, there would be more warrant for describing women as the unæsthetic sex. Neither for music,

nor for poetry, nor for fine art, have they really and truly any sense or susceptibility; it is a mere mockery if they make a pretence of it in order to assist their endeavour to please. Hence, as a result of this, they are incapable of taking a purely objective interest in everything; and the reason of it seems to me to be as follows. A man tries to acquire direct mastery over things, either by understanding them, or by forcing them to do his will. But a woman is always and everywhere reduced to obtaining this mastery indirectly, namely through a man; and whatever direct mastery she may have is entirely confined to him. And so it lies in woman's nature to look upon everything only as a means for conquering man; and if she takes an interest in anything else, it is simulated—a mere roundabout way of gaining her ends by coquetry, and feigning what she does not feel. Hence even Rousseau declared: "Women have, in general, no love of any art; they have no proper knowledge of any; and they have no genius." \*

No one who sees at all below the surface can have failed to remark the same thing. You need only observe the kind of attention women bestow upon a concert, an opera, or a play—the childish simplicity, for example, with which they keep on chattering during the finest passages in the greatest masterpieces. If it is true that the Greeks

\* *Lettre à d'Alembert*. Note xx.

excluded women from their theatres, they were quite right in what they did; at any rate you would have been able to hear what was said upon the stage. In our day, besides, or in lieu of saying, "Let a woman keep silence in the church," it would be much to the point to say, "Let a woman keep silence in the theatre." This might, perhaps, be put up in big letters on the curtain.

And you cannot expect anything else of women if you consider that the most distinguished intellects among the whole sex have never managed to produce a single achievement in the fine arts that is really great, genuine, and original, or given to the world any work of permanent value in any sphere. This is most strikingly shown in regard to painting, where mastery of technique is at least as much within their power as within ours—and hence they are diligent in cultivating it; but still, they have not a single great painting to boast of, just because they are deficient in that objectivity of mind which is so directly indispensable in painting. They never get beyond a subjective point of view. It is quite in keeping with this that ordinary women have no real susceptibility for art at all; for nature proceeds in strict sequence—*non facit saltum*. And Huarte\* in his "Examen de ingenios para las

\* *Translator's Note*.—Juan Huarte (1520?–1590) practised as a physician at Madrid. The work cited

scienziass"—a book which has been famous for three hundred years—denies women the possession of all the higher faculties. The case is not altered by particular and partial exceptions; taken as a whole, women are, and remain, thorough-going Philistines, and quite incurable. Hence, with that absurd arrangement which allows them to share the rank and title of their husbands, they are a constant stimulus to his ignoble ambitions. And, further, it is just because they are Philistines that modern society, where they take the lead and set the tone, is in such a bad way. Napoleon's saying—that "women have no rank"—should be adopted as the right standpoint in determining their position in society; and as regards their other qualities, Chamfort \* makes the very true remark: "They are made to trade with our own weaknesses and our follies, but not with our reason. The sympathies that exist between them and men are skin-deep only, and do not touch the mind or the feelings or the character."

They form the *sexus sequior*—the second sex, inferior in every respect to the first; their infirmities should be treated with consideration; but to show them great reverence is extremely ridiculous, and lowers us in their eyes. When na-

by Schopenhauer is well known, and has been translated into many languages.

\* *Translator's Note*.—See "Counsels and Maxims," p. 12, note.

ture made two divisions of the human race, she did not draw the line exactly through the middle. These divisions are polar and opposed to each other, it is true; but the difference between them is not qualitative merely, it is also quantitative.

This is just the view which the ancients took of woman, and the view which people in the East take now; and their judgment as to her proper position is much more correct than ours, with our old French notions of gallantry and our preposterous system of reverence—that highest product of Teutonic-Christian stupidity. These notions have served only to make women more arrogant and overbearing: so that one is occasionally reminded of the holy apes in Benares, who in the consciousness of their sanctity and inviolable position, think they can do exactly as they please.

But in the West, the women, and especially the “lady,” finds herself in a false position; for woman, rightly called by the ancients *sexus sequior* is by no means fit to be the object of our honour and veneration, or to hold her head higher than man and be on equal terms with him. The consequences of this false position are sufficiently obvious. Accordingly, it would be a very desirable thing if this Number Two of the human race were in Europe also relegated to her natural place, and an end put to that lady-nuisance, which not only moves all Asia to laugh-

ter, but would have been ridiculed by Greece and Rome as well. It is impossible to calculate the good effects which such a change would bring about in our social, civil and political arrangements. There would be no necessity for the Salic law: it would be a superfluous truism. In Europe the "lady" strictly so-called, is a being who should not exist at all; she should be either a housewife or a girl who hopes to become one; and she should be brought up, not to be arrogant, but to be thrifty and submissive. It is just because there are such people as "ladies" in Europe that the women of the lower classes, that is to say, the great majority of the sex, are much more unhappy than they are in the East. And even Lord Byron says: "Thought of the state of women under the ancient Greeks—convenient enough. Present state, a remnant of the barbarism of the chivalric and the feudal ages—artificial and unnatural. They ought to mind home—and be well fed and clothed—but not mixed in society. Well educated, too, in religion—but to read neither poetry nor politics—nothing but books of piety and cookery. Music—drawing—dancing—also a little gardening and ploughing now and then. I have seen them mending the roads in Epirus with good success. Why not, as well as hay-making and milking?"

The laws of marriage prevailing in Europe consider the woman as the equivalent of the man

—start, that is to say, from a wrong position. In our part of the world where monogamy is the rule, to marry means to have one's rights and double one's duties. Now, when the laws gave women equal rights with man, they ought to have also endowed her with a masculine intellect. But the fact is, that just in proportion as the honours and privileges which the laws accord to women, exceed the amount which Nature gives, is there a diminution in the number of women who really participate in these privileges; and all the remainder are deprived of their natural rights by just so much as is given to the others over and above their share. For the institution of monogamy, and the laws of marriage which it entails, bestow upon the woman an unnatural position of privilege, by considering her throughout as the full equivalent of the man, which is by no means the case; and seeing this, men who are shrewd and prudent very often scruple to make so great a sacrifice and to acquiesce in so unfair an arrangement.

Consequently, while among polygamous nations every woman is provided for, where monogamy prevails the number of married women is limited; and there remains over a large number of women without stay or support, who, in the upper classes, vegetate as useless old maids and in the lower succumb to hard work for which they are not suited; or else become *filles de joie*, whose life

is as destitute of joys as it is of honour. But under the circumstances they become a necessity; and their position is openly recognized as serving the special end of warding off temptation from those women favoured by fate, who have found, or may hope to find, husbands. In London alone there are eighty thousand prostitutes. What are they but the women, who, under the institution of monogamy, have come off worst? Theirs is a direful fate: they are human sacrifices offered up on the altar of monogamy. The women whose wretched position is here described are the inevitable setoff to the European lady with her arrogance and pretension. Polygamy is therefore a real benefit to the female sex if it is taken as a whole. And, from another point of view, there is no true reason why a man whose wife suffers from chronic illness, or remains barren, or has gradually become too old for him, should not take a second. The motives which induce so many people to become converts to Mormonism \* appear to be just those which militate against the unnatural institution of monogamy.

Moreover, the bestowal of unnatural rights upon women has imposed upon them unnatural duties, and, nevertheless, a breach of these duties makes them unhappy. Let me explain. A man

\* *Translator's Note.*—The Mormons have recently given up polygamy, and received the American franchise in its stead.

may often think that his social or financial position will suffer if he marries, unless he makes some brilliant alliance. His desire will then be to win a woman of his own choice under conditions other than those of marriage, such as will secure her position and that of the children. However fair, reasonable, fit and proper these conditions may be, and the woman consents by foregoing that undue amount of privilege which marriage alone can bestow, she to some extent loses her honour, because marriage is the basis of civic society; and she will lead an unhappy life, since human nature is so constituted that we pay an attention to the opinion of other people which is out of all proportionate to its value. On the other hand, if she does not consent, she runs the risk either of having to be given in marriage to a man whom she does not like, or of being landed high and dry as an old maid; for the period during which she has a chance of being settled for life is very short. And in view of this aspect of the institution of monogamy, 'Thomasius' profoundly learned treatise, "*de Concubinatu*," is well worth reading; for it shows that, among all nations and in all ages, down to the Lutheran Reformation, concubinage was permitted; nay, that it was an institution which was to a certain extent actually recognized by law, and attended with no dishonour. It was only the Lutheran Reformation that degraded it from this position.

It was seen to be a further justification for the marriage of the clergy; and then, after that the Catholic Church did not dare to remain behind-hand in the matter.

There is no use arguing about polygamy; it must be taken as *de facto* existing everywhere, and the only question is as to how it shall be regulated. Where are there, then any real monogamists? We all live, at any rate, for a time, and most of us, always, in polygamy. And so, since every man needs many women, there is nothing fairer than to allow him, nay, to make it incumbent upon him, to provide for many women. This will reduce woman to her true and natural position as a subordinate being; and the lady—that monster of European civilization and Teutonico-Christian stupidity—will disappear from the world, leaving only women, but no more unhappy women, of whom Europe is now full.

In India no woman is ever independent, but in accordance with the law of Manu,\* she stands under the control of her father, her husband, her brother or her son. It is, to be sure, a revolting thing that a widow should immolate herself upon her husband's funeral pyre; but it is also revolting that she should spend her husband's money with her paramours—the money for which he toiled his whole life long, in the consoling belief that he was providing for his children. Happy

\* Ch. V., v. 148.

are those who have kept the middle course—*medium tenuere beati*.

The first love of a mother for her child is, with the lower animals as with men, of a purely instinctive character, and so it ceases when the child is no longer in a physically helpless condition. After that, the first love should give way to one that is based on habit and reason; but this often fails to make its appearance, especially where the mother did not love the father. The love of a father for his child is of a different order, and more likely to last; because it has its foundation in the fact that in the child he recognizes his own inner self; that is to say, his love for it is metaphysical in its origin.

In almost all nations, whether of the ancient or the modern world, even among the Hottentots,\* property is inherited by the male descendants alone; it is only in Europe that a departure has taken place; but not among the nobility, however. That the property which has cost men long years of toil and effort, and been won with so much difficulty, should afterward come into the hands of women, who then, in their lack of reason, squander it in a short time, or otherwise fool it away, is a grievance and a wrong, as serious as it is common, which should be prevented by limiting the right of women to inherit.

\*Leroy, "Lettres philosophiques sur l'intelligence et la perfectibilité des animaux, avec quelques lettres sur l'homme," p. 298, Paris, 1802.

In my opinion, the best arrangement would be that by which women, whether widows or daughters, should never receive anything beyond the interest for life on property secured by mortgage, and in no case the property itself, or the capital, except where all male descendants fail. The people who make money are men, not women; and it follows from this that women are neither justified in having unconditional possession of it, nor fit persons to be entrusted with its admiration. When wealth, in any true sense of the word, that is to say, funds, houses or land, is to go to them as an inheritance, they should never be allowed the free disposition of it. In their case a guardian should always be appointed; and hence they should never be given the free control of their own children, wherever it can be avoided. The vanity of women, even though it should not prove to be greater than that of men, has this much danger in it, that it takes an entirely material direction. They are vain, I mean, of their personal beauty, and then of finery, show and magnificence. That is just why they are so much in their element in society. It is this, too which makes them so inclined to be extravagant, all the more as their reasoning power is low. Accordingly we find an ancient writer describing women as in general of an extravagant nature—*Γυνή το σύνολον ἔστι δαπανηρὸν φύσει*. But with men vanity often takes the direction of non-

material advantages, such as intellect, learning, courage.

In the *Politics* Aristotle explains the great disadvantage which accrued to the Spartans from the fact that they conceded too much to their women, by giving them the right of inheritance and dower, and a great amount of independence; and he shows how much this contributed to Sparta's fall. May it not be the case in France that the influence of women, which went on increasing steadily from the time of Louis XIII., was to blame for that gradual corruption of the court and the government, which brought about the revolution of 1789, of which all subsequent disturbances have been the fruit? However that may be, the false position which women occupy, demonstrated as it is, in the most glaring way, by the institution of the lady, is a fundamental defect in our social scheme, and this defect, proceeding from the very heart of it, must spread its baneful influence in all directions.

That woman is by nature meant to obey may be seen by the fact that every woman who is placed in the unnatural position of complete independence, immediately attaches herself to some man, by whom she allows herself to be guided and ruled. It is because she needs a lord and master. If she is young, it will be a lover; if she is old, a priest.

ARTHUR SCHOPENHAUER.

OF THE INSTITUTION AND EDUCATION OF  
CHILDREN; TO THE LADIE DIANA OF  
FOIX, COUNTESSE OF GURSON

I NEVER knew father, how crooked and deformed soever his sonne were, that would either altogether cast him off, or not acknowledge him for his owne: and yet (unlesse he be meerely besotted or blinded in his affection) it may not be said, but he plainly perceiveth his defects, and hath a feeling of his imperfections. But so it is, he is his owne. So is it in my selfe. I see better than any man else, that what I have set downe, is nought but the fond imaginations of him, who in his youth hath tasted nothing but the paring, and seen but the superficies of true learning: whereof he hath retained but a generall and shapelesse forme: a smacke of everything in generall, but nothing to the purpose in particular: After the French manner. To be short, I know there is an art of Phisicke; a course of lawes; foure parts of the Mathematikes; and I am not altogether ignorant, what they tend unto. And perhaps I also know the scope and drift of Sciences in generall, to be for the service of our life. But to wade further, or that ever I tired my selfe with plodding upon *Aristotle* (the Mon-

arch of our moderne doctrine) or obstinately continued in the search of any one science: I confesse I never did it. Nor is there any one art, whereof I am able so much as to draw the first lineaments. And there is no scholler (be he of the lowest forme) that may not repute himselfe wiser than I, who am not able to appose him in his first lesson: and if I be forced to it, I am constrained verie impertinently to draw in matter from some generall discourse, whereby I examine, and give a guesse at his naturall judgement: a lesson as much unknowne to them, as theirs is to me. I have not dealt or had commerce with any excellent booke, except *Plutarke* or *Seneca*, from whom (as the *Danaides*) I draw my water, uncessantly filling, and as fast emptying: something whereof I fasten to this paper, but to myselfe nothing at all. And touching bookes: Historie is my chiefe studie, Poesie my only delight, to which I am particularly affected: for as *Cleanthes* said, that as the voice being forcible pent in the narrow gullet of a trumpet, at last issueth forth more strong and shriller, so me seemes, that a sentence cunningly and closely couched in measure-keeping Poesie, darts it selfe forth more furiously, and wounds me even to the quicke. And concerning the naturall faculties that are in me, (whereof behold here an essay) I perceive them to faint under their owne burthen; my conceits, and my judgment march but uncertaine,

and as it were groping, staggering, and stumbling at every rush: And when I have gone as far as I can, I have no whit pleased my selfe: for the further I saile, the more land I descrie, and that so dimmed with fogges, and overcast with clouds, that my sight is so weakned, I cannot distinguish the same. And then undertaking to speake indifferently of all that presents it selfe unto my fantasie, and having nothing but mine owne naturall meanes to imploy therein, if it be my hap (as commonly it is) among good Authors, to light upon those verie places which I have undertaken to treat off, as even now I did in *Plutarke*, reading his discourse of the power of imagination, wherein in regard of those wise men, I acknowledge my selfe so weake, and so poore, so dull and grose-headed, as I am forced both to pittie and disdaine my selfe, yet am I pleased with this, that my opinions have often the grace to jump with theirs, and that I follow them a loofe-off, and thereby possesse at least, that which all other men have not; which is, that I know the utmost difference betweene them and my selfe: all which notwithstanding I suffer my inventions to run abroad, as weake and faint, as I have produced them, without bungling and botching the faults, which this comparison hath discovered to me in them. . . I never spake of others, but that I may the more speake of my selfe. This concerneth not those mingle-mangles of many

kinds of stuffe, or as the Grecians call them *Rapsodies*, that for such are published, of which kind I have (since I came to yeares of discretion) seen divers most ingenious and wittie; amongst others, one under the name of *Capilupus*; besides many of the ancient stampe. These are wits of such excellence, as both here and elsewhere they will soone be perceived, as our later famous writer *Lipsius*, in his learned and laborious work of the *Politikes*: yet whatsoever come of it, for so much as they are but follies, my intent is not to smother them, no more than a bald and hoarie picture of mine, where a Painter hath drawne not a perfect visage, but mine owne. For, howsoever, these are but my humours and opinions, and I deliver them but to show what my conceit is, and not what ought to be beleaved. Wherin I ayme at nothing but to display my selfe, who peradventure (if a new prentiship change me) shall be another to morrow. I have no authoritie to purchase beliefe, neither do I desire it; knowing well that I am not sufficiently taught to instruct others. . . . My meaning is, but to shew, that the greatest difficultie, and importing all humane knowledge, seemeth to be in this point, where the nurture and institution of young children is in question. For, as in matters of husbandrie, the labour that must be used before sowing, setting, and planting, yea in planting it selfe, is most certaine and easie. But when that which was sown, set and

planted, commeth to take life; before it come to ripenesse, much adoe, and great varietie of proceeding belongeth to it. So in men, it is no great matter to get them, but being borne, what continuall cares, what diligent attendance, what doubts and feares, doe daily wait on their parents and tutors, before they can be nurtured and brought to any good! The fore-shew of their inclination whilst they are young is so uncertaine, their humours so variable, their promises so changing, their hopes so false, and their proceedings so doubtful, that it is very hard, (yea for the wisest) to ground any certaine judgement, or assured successe upon them. Behold *Cymon*, view *Themistocles*, and a thousand others, how they have differed, and fallen to better from themselves, and deceive the expectation of such as knew them. The young whelps both of Dogges and Beares, at first sight shew their naturall disposition, but men headlong imbracing this custome or fashion, following that humor or opinion, admitting this or that passion, allowing of that or this law, are easily changed, and soone disguised; yet is it hard to force the naturall propension or readinesse of the mind, whereby it followeth, that for want of heedie fore-sight in those that could not guide their course well, they often employ much time in vaine, to addresse young children in those matters, whereunto they are not naturally addicted. All which difficulties

notwithstanding, mine opinion is, to bring them up in the best and profitablest studies, and that a man should slightly passe over those fond presages, and deceiving prognostikes, which we over precisely gather in their infancie.

. . . Madame, Learning joyned with true knowledge is an especiall and graceful ornament, and an implement of wonderfull use and consequence, namely in persons raised to that degree of fortune, wherein you are. And in good truth, learning hath not her owne true forme, nor can she make shew of her beauteous lineaments, if she fall into the hands of base and vile persons. [For, as famous *Torquato Tasso* saith; "Philosophie being a rich and noble Queene, and "knowing her owne worth, graciously smileth "upon, and lovingly embraceth Princes and noble "men, if they become suters to her, admitting "them as her minions, and gently affoording them "all the favours she can; whereas upon the contrarie, if she be wooed, and sued unto by "clownes, mechanicall fellowes, and such base "kind of people, she holds her selfe disparaged "and disgraced, as holding no proportion with "them. And therefore see we by experience, that "if a true Gentleman, or nobleman follow her "with any attention, and woo her with importunitie, he shall learne and know more of her, "and prove a better scholler in one yeare, than "an ungentle or base fellow shall in seven, though

“he pursue her never so attentively.”] She is much more readie and fierce to lend her furtherance and direction in the conduct of a warre, to attempt honourable actions, to command a people, to treat a peace with a prince of forraine nation, than she is to forme an argument in Logick, to devise a Syllogisme, to canvase a case at the barre, or to prescribe a receipt of pills. So (noble Ladie) forsomuch as I cannot perswade my selfe, that you will either forget or neglect this point, concerning the institution of yours, especially having tasted the sweetnesse thereof, and being descended of so noble and learned a race. For we yet possesse the learned compositions of the ancient and noble Earles of *Foix*, from out whose heroicke loynes your husband and you take your of-spring. And *Francis* Lord of *Candale* your worthie uncle, doth daily bring forth such fruits thereof, as the knowledge of the matchlesse qualitie of your house shall hereafter extend it selfe to many ages; I will therefore make you acquainted with one conceit of mine, which contrarie to the common use I hold, and that is all I am able to affoord you, concerning that matter. The charge of the Tutor, which you shall appoint your sonne, in the choice of whom consisteth the whole substance of his education and bringing-up; on which are many branches depending, which (forasmuch as I can adde nothing of any moment to it) I will not touch at all.

And for that point, wherein I presume to advise him, he may so far forth give credit unto it, as he shall see just cause. To a gentleman borne of noble parentage, and heire of a house, that aymeth at true learning, and in it would be disciplined, not so much for gaine or commoditie to himselfe (because so abject an end is far unworthie the grace and favour of the Muses, and besides, hath a regard or dependencie of others) nor for externall shew and ornament, but to adorne and enrich his inward minde, desiring rather to shape and institute an able and sufficient man, than a bare learned man. My desire is therefore, that the parents or overseers of such a gentleman be very circumspect, and carefull in chusing his director, whom I would rather commend for having a well composed and temperate braine, than a full stuff head, yet both will doe well. And I would rather prefer wisdome, judgement, civill customes, and modest behaviour, than bare and meere literall learning; and that in his charge he hold a new course. Some never cease brawling in their schollers eares (as if they were still pouring in a tonell) to follow their booke, yet is their charge nothing else, but to repeat, what hath beene told them before. I would have a tutor to correct this part, and that at first entrance, according to the capacitie of the wit he hath in hand, he should begin to make shew of it, making him to have a smacke of all things, and

how to chuse and distinguish them, without helpe of others, sometimes opening him the way, other times leaving him to open it by himselfe. I would not have him to invent and speake alone, but suffer his disciple to speake when his turne commeth. *Socrates*, and after him *Arcefilaus*, made their schollers to speak first, and then would speake themselves. *Most commonly the authoritie of them that teach, hinders them that would learne.*

It is therefore meet, that he make him first trot-on before him, whereby he may the better judge of his pace, and so guesse how long he will hold out, that accordingly he may fit his strength: for want of which proportion, we often marre all. And to know how to make a good choice, and how far forth one may proceed (still keeping a due measure) is one of the hardest labours I know. It is a signe of a noble, and effect of an undanted spirit, to know how to second, and how far forth he shall condescend to his childish proceedings, and how to guide them. As for my selfe, I can better and with more strength walke up, than downe a hill. Those which according to our common fashion, undertake with one selfesame lesson, and like manner of education, to direct many spirits of divers formes and different humours, it is no marvell if among a multitude of children, they scarce meet with two or three, that reap any good fruit by their discipline, or that come to any perfection. I would not only have

him to demand an accompt of the words contained in his lesson, but of the sense and substance thereof, and judge of the profit he hath made of it, not by the testimonie of his memorie, but by the witsse of his life. That what he lately learned, he cause him to set forth and portray the same into sundrie shapes, and then to accommodate it to as many different and severall subjects; whereby he shall perceive, whether he have yet apprehended the same, and therein enfeoffed himselfe, at due times taking his instruction from the institution given by *Plato*. It is a signe of cruditie and indigestion for a man to yeeld up his meat, even as he swallowed the same: the stomacke hath not wrought his full operation, unlesse it have changed forme, and altered fashion of that which was given him to boyle and concoct.] . . . To know by roat is no perfect knowledge, but to keep what one hath committed to his memories charge, is commendable: what a man directly knoweth, that will he dispose of, without turning still to his booke, or looking to his pattern. A meere bookish sufficiencie is unpleasant. All I expect of it, is an imbellishing of my actions, and not a foundation of them, according to *Platoes* mind, who saith, constancie, faith, and sinceritie, are true Philosophie; as for other Sciences, and tending else-where, they are but garish paintings.]

MICHAEL, LORD OF MONTAIGNE.

## OF GREAT PLACE

MEN in great places are thrice servants: servants of the sovereign or state; servants of fame; and servants of business. So as they have no freedom, neither in their persons, nor in their actions, nor in their times. It is a strange desire, to seek power and to lose liberty; or to seek power and to lose power over a man's self. The rising unto place is laborious, and by pains men come to greater pains; and it is sometimes base, and by indignities men come to dignities. The standing is slippery; and the regress is either a downfall, or at least an eclipse, which is a melancholy thing. *Cum non sis qui fueris, non esse cur velis vivere.*\* Nay, retire men cannot when they would; neither will they when it were reason; but are impatient of privateness, even in age and sickness, which require the shadow: like old townsmen, that will be still sitting at their street door, though thereby they offer age to scorn. Certainly, great persons had need to borrow other men's opinions, to think themselves

\* When you are no longer what you were, there is no reason why you should wish to keep on living (Cicero).

happy; for if they judge by their own feeling, they cannot find it: but if they think with themselves what other men think of them, and that other men would fain be as they are, then they are happy as it were by report, when perhaps they find the contrary within. For they are the first that find their own griefs, though they be the last that find their own faults. Certainly, men in great fortunes are strangers to themselves, and while they are in the puzzle of business they have no time to tend their health, either of body or mind. *Illi mors gravis incubat, qui notus nimis omnibus, ignotus moritur sibi.*\* In place there is licence to do good and evil; whereof the latter is a curse: for in evil the best condition is not to will, the second not to can. But power to do good is the true and lawful end of aspiring. For good thoughts (though God accept them) yet towards men are little better than good dreams, except they be put in act; and that cannot be without power and place, as the vantage and commanding ground. Merit and good works is the end of man's motion; and conscience of the same is the accomplishment of man's rest. For if a man can be partaker of God's theater, he shall likewise be partaker of God's rest. *Et conversus Deus ut aspiceret opera quæ fecerunt nanus suæ, vidit quod*

\* Sad is the fate of him who ends his days all too well known to others, but a stranger to himself (Seneca, *Thyestes*).

*omnia essent bona nimis*; \* and then the Sabbath. In the discharge of thy place, set before thee the best examples; for imitation is a globe of precepts. And after a time set before thee thine own example; and examine thyself strictly, whether thou didst not best at first. Neglect not also the examples of those that have carried themselves ill in the same place; not to set off thyself by taxing their memory, but to direct thyself what to avoid. Reform, therefore, without bravery or scandal of former times and persons; but yet set it down to thyself as well to create good precedents as to follow them. Reduce things to the first institution, and observe wherein and how they have degenerate; but yet ask counsel of both times; of the ancient time, what is best; and of the latter time, what is fittest. Seek to make thy course regular, that men may know beforehand what they may expect; but be not too positive and peremptory; and express thyself well when thou digressest from thy rule. Preserve the right of thy place, but stir not questions of jurisdiction: and rather assume thy right in silence and *de facto*, than voice it with claims and challenges. Preserve likewise the rights of inferior places; and think it more honour to direct in

\* And God, turning back to look upon the works which his hands had made, saw that all were very good (Genesis, i, 31, quoted inexactly from the Vulgate).

chief than to be busy in all. Embrace and invite helps and advices touching the execution of thy place; and do not drive away such as bring thee information as meddlers, but accept of them in good part. The vices of authority are chiefly four: delays, corruption, roughness, and facility. For delays; give easy access; keep times appointed; go through with that which is in hand; and interlace not business but of necessity. For corruption; do not only bind thine own hands or thy servants' hands from taking, but bind the hands of suitors also from offering. For integrity used doth the one; but integrity professed, and with a manifest detestation of bribery, doth the other. And avoid not only the fault, but the suspicion. Whosoever is found variable, and changeth manifestly without manifest cause, giveth suspicion of corruption. Therefore always when thou changest thine opinion or course, profess it plainly and declare it, together with the reasons that move thee to change; and do not think to steal it. A servant or a favourite, if he be inward, and no other apparent cause of esteem, is commonly thought but a by-way to close corruption. For roughness, it is a needless cause of discontent: severity breedeth fear, but roughness breedeth hate. Even reproofs from authority ought to be grave, and not taunting. As for facility, it is worse than bribery. For bribes come but now and then; but if importunity or idle re-

spects lead a man, he shall never be without. As Solomon saith: "To respect persons is not good; for such a man will transgress for a piece of bread." It is most true that was anciently spoken, "A place showeth the man": and it showeth some to the better, and some to the worse. *Omnium consensu capax imperii, nisi imperasset*,\* saith Tacitus of Galba; but of Vespasian he saith, *Solus imperantium Vespasianus mutatus in melius*: † though the one was meant of sufficiency, the other of manners and affection. It is an assured sign of a worthy and generous spirit, whom honour amends. For honour is, or should be, the place of virtue; and as in nature things move violently to their place, and calmly in their place; so virtue in ambition is violent, in authority settled and calm. All rising to great place is by a winding stair; and if there be factions, it is good to side a man's self whilst he is in the rising, and to balance himself when he is placed. Use the memory of thy predecessor fairly and tenderly; for if thou dost not, it is a debt will sure be paid when thou art gone. If thou have colleagues, respect them, and rather call them when they look not for it, than exclude them when they have reason to look to be called. Be not too sensible

\* All men would have thought him competent to rule if they had not seen him as a ruler.

† Of all emperors Vespasian alone changed for the better.

or too remembering of thy place in conversation and private answers to suitors; but let it rather be said, "When he sits in place he is another man."

FRANCIS BACON.

## IRRITABILITY OF MEN OF GENIUS

I HAVE often thought, that it would be neither uninstructional nor unamusing to analyse, and bring forward into distinct consciousness, that complex feeling, with which readers in general take part against the author, in favour of the critic; and the readiness with which they apply to all poets the old sarcasm of Horace upon the scribblers of his time:

—*genus irritabile vatum.*

A debility and dimness of the imaginative power, and a consequent necessity of reliance on the immediate impressions of the senses, do, we know well, render the mind liable to superstition and fanaticism. Having a deficient portion of internal and proper warmth, minds of this class seek in the crowd *circum fana* for a warmth in common, which they do not possess singly. Cold and phlegmatic in their own nature, like damp hay, they heat and inflame by co-acervation; or like bees they become restless and irritable through the increased temperature of collected multitudes. Hence the German word for fanaticism, (such at least was its original import,) is derived from

the swarming of bees, namely, *schwärmen*, *schwärmerey*. The passion being in an inverse proportion to the insight,—that the more vivid, as this the less distinct—anger is the inevitable consequence. The absence of all foundation within their own minds for that, which they yet believe both true and indispensable to their safety and happiness, cannot but produce an uneasy state of feeling, an involuntary sense of fear from which nature has no means of rescuing herself but by anger. Experience informs us that the first defence of weak minds is to recriminate.

There's no philosopher but sees,  
That rage and fear are one disease;  
Tho' that may burn, and this may freeze,  
They're both alike the ague.

But where the ideas are vivid, and there exists an endless power of combining and modifying them, the feelings and affections blend more easily and intimately with these ideal creations than with the objects of the senses; the mind is affected by thoughts, rather than by things; and only then feels the requisite interest even for the most important events and accidents, when by means of meditation they have passed into thoughts. The sanity of the mind is between superstition with fanaticism on the one hand, and enthusiasm with indifference and a diseased slowness to action on the other. For the conceptions

of the mind may be so vivid and adequate, as to preclude that impulse to the realizing of them, which is strangest and most restless in those, who possess more than mere talent, (or the faculty of appropriating and applying the knowledge of others,)—yet still want something of the creative and self-sufficing power of absolute genius. For this reason therefore, they are men of *commanding* genius. While the former rest content between thought and reality, as it were in an *inter-mundium* of which their own living spirit supplies the substance, and their imagination the ever-varying form; the latter must impress their preconceptions on the world without, in order to present them back to their own view with the satisfying degree of clearness, distinctness, and individuality. These in tranquil times are formed to exhibit a perfect poem in palace, or temple, or landscape-garden; or a tale of romance in canals that join sea with sea, or in walls of rock, which, shouldering back the billows, imitate the power, and supply the benevolence of nature to sheltered navies; or in aqueducts that, arching the wide vale from mountain to mountain, give a Palmyra to the desert. But alas! in times of tumult they are the men destined to come forth as the shaping spirit of ruin, to destroy the wisdom of ages in order to substitute the fancies of a day, and to change kings and kingdoms, as the

wind shifts and shapes the clouds.\* The records of biography seem to confirm this theory. The men of the greatest genius, as far as we can judge from their own works or from the accounts of their contemporaries, appear to have been of calm and tranquil temper in all that related to themselves. In the inward assurance of permanent fame, they seem to have been either indifferent or resigned with regard to immediate reputation. Through all the works of Chaucer there reigns a cheerfulness, a manly hilarity which makes it almost impossible to doubt a correspondent habit of feeling in the author himself. Shakespeare's evenness and sweetness of temper were almost proverbial in his own age. That this did not arise from ignorance of his own comparative greatness, we have abundant proof in his Sonnets, which could scarcely have been known to Pope,\* when he asserted, that our great bard—

\* Of old things all are over old,  
Of good things none are good enough:—  
We'll show that we can help to frame  
A world of other stuff.

I too will have my kings, that take  
From me the sign of life and death:  
Kingdoms shall shift about, like clouds,  
Obedient to my breath.

*Wordsworth's Rob Roy.*—Poet. Works, vol. III. p. 127.

\* Pope was under the common error of his age, an error far from being sufficiently exploded even at the present day. It consists (as I explained at large, and

—grew immortal in his own despite  
(Epist. to Augustus.)

Speaking of one whom he had celebrated, and contrasting the duration of his works with that of his personal existence, Shakespeare adds:

Your name from hence immortal life shall  
have,  
Tho' I once gone to all the world must die;  
The earth can yield me but a common grave,  
When you entombed in men's eyes shall lie.  
Your monument shall be my gentle verse,  
Which eyes not yet created shall o'er-read;  
And tongues to be your being shall rehearse,

proved in detail in my public lectures,) in mistaking for the essentials of the Greek stage certain rules, which the wise poets imposed upon themselves, in order to render all the remaining parts of the drama consistent with those, that had been forced upon them by circumstances independent of their will; out of which circumstances the drama itself arose. The circumstances in the time of Shakespeare, which it was equally out of his power to alter, were different, and such as, in my opinion, allowed a far wider sphere, and a deeper and more human interest. Critics are too apt to forget, the rules are but means to an end; consequently, where the ends are different, the rules must be likewise so. We must have ascertained what the end is, before we can determine what the rules ought to be. Judging under this impression, I do not hesitate to declare my full conviction, that the consummate judgment of Shakespeare, not only in the construction, but in all the details, of his dramas, impressed me with greater wonder, than even the might of his genius, or the depth of his philosophy.

When all the breathers of this world are dead:  
 You still shall live, such virtue hath my pen,  
 Where breath most breathes, e'en in the mouth  
 of men.

## SONNET LXXXI.

I have taken the first that occurred; but Shakespeare's readiness to praise his rivals, *ore pleno*, and the confidence of his own equality with those whom he deemed most worthy of his praise, are alike manifested in another Sonnet.

Was it the proud full sail of his great verse,  
 Bound for the praise of all-too-precious you,  
 That did my ripe thoughts in my brain inhearse,  
 Making their tomb, the womb wherein they  
 grew

Was it his spirit, by spirits taught to write  
 Above a mortal pitch that struck me dead?  
 No, neither he, nor his compeers by night  
 Giving him aid, my verse astonished.  
 He, nor that affable familiar ghost,  
 Which nightly gulls him with intelligence,  
 As victors of my silence cannot boast;  
 I was not sick of any fear from thence!

The substance of these lectures I hope soon to publish; and it is but a debt of justice to myself and my friends to notice, that the first course of lectures, which differed from the following courses only, by occasionally varying the illustrations of the same thoughts, was addressed to very numerous, and I need not add, respectable audiences at the Royal Institution, before Mr. Schlegel gave his lectures on the same subjects at Vienna.

But when your countenance fill'd up his line,  
Then lack'd I matter, that enfeebled mine.

S. LXXXVI.

In Spenser, indeed, we trace a mind constitutionally tender, delicate, and, in comparison with his three great compeers, I had almost said, effeminate; and this additionally saddened by the unjust persecution of Burleigh, and the severe calamities, which overwhelmed his latter days. These causes have diffused over all his compositions "a melancholy grace," and have drawn forth occasional strains, the more pathetic from their gentleness. But nowhere do we find the least trace of irritability, and still less of quarrelsome or affected contempt of his censurers.

The same calmness, and even greater self-possession, may be affirmed of Milton, as far as his poems, and poetic character are concerned. He reserved his anger for the enemies of religion, freedom, and his country. My mind is not capable of forming a more august conception, than arises from the contemplation of this great man in his latter days;—poor, sick, old, blind, slandered, persecuted,—

Darkness before, and danger's voice behind,—  
in an age in which he was as little understood by the party, for whom, as by that against whom, he had contended; and among men before whom

he strode so far as to dwarf himself by the distance; yet still listening to the music of his own thoughts, or if additionally cheered, yet cheered only by the prophetic faith of two or three solitary individuals, he did nevertheless

——argue not

Against Heaven's hand or will, nor bate a jot  
Of heart or hope; but still bore up and steer'd  
Right onward.

From others only do we derive our knowledge that Milton, in his latter day, had his scorers and detractors; and even in his day of youth and hope, that he had enemies would have been unknown to us, had they not been likewise the enemies of his country.

I am well aware, that in advanced stages of literature, when there exist many and excellent models, a high degree of talent, combined with taste and judgment, and employed in works of imagination, will acquire for a man the name of a great genius; though even that *analogon* of genius, which, in certain states of society, may even render his writings more popular than the absolute reality could have done, would be sought for in vain in the mind and temper of the author himself. Yet even in instances of this kind, a close examination will often detect, that the irritability, which has been attributed to the author's genius as its cause, did really originate in an

ill conformation of body, obtuse pain, or constitutional defect of pleasurable sensation. What is charged to the author, belongs to the man, who would probably have been still more impatient, but for the humanizing influences of the very pursuit, which yet bears the blame of his irritability.

How then are we to explain the easy credence generally given to this charge, if the charge itself be not, as I have endeavoured to show, supported by experience? This seems to me of no very difficult solution. In whatever country literature is widely diffused, there will be many who mistake an intense desire to possess the reputation of poetic genius, for the actual powers, and original tendencies which constitute it. But men, whose dearest wishes are fixed on objects wholly out of their own power, become in all cases more or less impatient and prone to anger. Besides, though it may be paradoxical to assert, that a man can know one thing and believe the opposite, yet assuredly a vain person may have so habitually indulged the wish, and persevered in the attempt to appear what he is not, as to become himself one of his own proselytes. Still, as this counterfeit and artificial persuasion must differ, even in the person's own feelings, from a real sense of inward power, what can be more natural, than that this difference should betray itself in suspicious and jealous irritability? Even as the

flowery sod, which covers a hollow, may be often detected by its shaking and trembling.

But, alas! the multitude of books and the general diffusion of literature, have produced other and more lamentable effects in the world of letters, and such as are abundant to explain, though by no means to justify, the contempt with which the best grounded complaints of injured genius are rejected as frivolous, or entertained as matter of merriment. In the days of Chaucer and Gower, our language might (with due allowance for the imperfections of a simile) be compared to a wilderness of vocal reeds, from which the favourites only of Pan or Apollo could construct even the rude *syrix*; and from this the constructors alone could elicit strains of music. But now, partly by the labours of successive poets, and in part by the more artificial state of society and social intercourse, language, mechanized as it were into a barrel-organ, supplies at once both instrument and tune. Thus even the deaf may play, so as to delight the many. Sometimes (for it is with similes, as it is with jests at a wine table, one is sure to suggest another) I have attempted to illustrate the present state of our language, in its relation to literature, by a press-room of larger and smaller stereotype pieces, which, in the present Anglo-Gallican fashion of unconnected, epigrammatic periods, it requires but an ordinary portion of ingenuity to vary in-

definitely, and yet still produce something, which, if not sense, will be so like it as to do as well. Perhaps better: for it spares the reader the trouble of thinking; prevents vacancy, while it indulges indolence; and secures the memory from all danger of an intellectual *plethora*. Hence of all trades, literature at present demands the least talent or information; and, of all modes of literature, the manufacturing of poems. The difference indeed between these and the works of genius is not less than between an egg and an egg-shell; yet at a distance they both look alike.

Now it is no less remarkable than true, with how little examination works of polite literature are commonly perused, not only by the mass of readers, but by men of first rate ability, till some accident or chance \* discussion have roused their

\* In the course of one of my Lectures, I had occasion to point out the almost faultless position and choice of words, in Pope's original compositions, particularly in his Satires and moral Essays, for the purpose of comparing them with his translation of Homer, which, I do not stand alone in regarding as the main source of our *pseudo*-poetic diction. And this, by the bye, is an additional confirmation of a remark made, I believe, by Sir Joshua Reynolds, that next to the man who forms and elevates the taste of the public, he that corrupts it, is commonly the greatest genius. Among other passages, I analyzed sentence by sentence, and almost word by word, the popular lines,

As when the moon, refulgent lamp of night, &c.  
(*Iliad*. B. viii.)

much in the same way as has been since done. in an

attention, and put them on their guard. And hence individuals below mediocrity not less in natural power than in acquired knowledge; nay, bunglers who have failed in the lowest mechanic

excellent article on Chalmers's British Poets in the Quarterly Review. The impression on the audience in general was sudden and evident: and a number of enlightened and highly educated persons, who at different times afterwards addressed me on the subject, expressed their wonder, that truth so obvious should not have struck them before; but at the same time acknowledged—(so much had they been accustomed, in reading poetry, to receive pleasure from the separate images and phrases successively, without asking themselves whether the collective meaning was sense or nonsense)—that they might in all probability have read the same passage again twenty times with undiminished admiration, and without once reflecting, that

ἄστρο φαεινὴν ἀμφὶ σελήνην  
φαίνει' ἀριπρεπέα—

(that is, the stars around, or near the full moon, shine pre-eminently bright)—conveys a just and happy image of a moonlight sky; while it is difficult to determine whether, in the lines,

Around *her throne* the vivid planets *roll*,  
And stars *unnumber'd* gild the *glowing pole*,

the sense or the diction be the more absurd. My answer was; that, though I had derived peculiar advantages from my school discipline, and though my general theory of poetry was the same then as now, I had yet experienced the same sensations myself, and felt as if I had been newly couched, when, by Mr. Wordsworth's conversation, I had been induced to re-examine with impartial strictness Gray's celebrated Elegy. I had long before detected the defects

crafts, and whose presumption is in due proportion to their want of sense and sensibility; men, who being first scribblers from idleness and ignorance, next become libellers from envy and malevolence,—have been able to drive a successful trade in the employment of the booksellers,

in *The Bard*; but the *Elegy* I had considered as proof against all fair attacks; and to this day I cannot read either without delight, and a portion of enthusiasm. At all events, whatever pleasure I may have lost by the clearer perception of the faults in certain passages, has been more than repaid to me by the additional delight with which I read the remainder.

Another instance in confirmation of these remarks occurs to me in the *Faithful Shepherdess*. Seward first traces Fletcher's lines;

More foul diseases than e'er yet the hot  
Sun bred thro' his burnings, while the dog  
Pursues the raging lion, throwing the fog  
And deadly vapour from his angry breath,  
Filling the lower world with plague and death,

to Spenser's *Shepherd's Calendar*,

The rampant lion hunts he fast  
With dogs of noisome breath;  
Whose baleful barking brings, in haste,  
Pine, plagues, and dreary death!

He then takes occasion to introduce Homer's simile of the appearance of Achilles mail to Priam compared with the Dog Star; literally thus—

"For this indeed is most splendid, but it was made an evil sign, and brings many a consuming disease to wretched mortals." Nothing can be more simple as a description, or more accurate as a simile; which, (says Seward,) is thus finely translated by Mr Pope:

may, have raised themselves into temporary name and reputation with the public at large, by that most powerful of all adulation, the appeal to the bad and malignant passions of mankind." But as it is the nature of scorn, envy, and all malignant propensities to require a quick change of objects, such writers are sure, sooner or later, to awake from their dream of vanity to disappointment and neglect with embittered and envenomed feelings. Even during their short-lived success, sensible in spite of themselves on what a shifting foundation

Terrific Glory! for his burning breath  
Taints the red air with fevers, plagues, and death!

Now here—(not to mention the tremendous bombast)—the Dog Star, so called, is turned into a real dog, a very odd dog, a fire, fever, plague, and death-breathing, red-air-tainting dog: and the whole visual likeness is lost, while the likeness in the effects is rendered absurd by the exaggeration. In Spenser and Fletcher the thought is justifiable; for the images are at least consistent, and it was the intention of the writers to mark the seasons by this allegory of visualized puns.

\* Especially in this age of personality, this age of literary and political gossiping, when the meanest insects are worshipped with a sort of Egyptian superstition, if only the brainless head be atoned for by the sting of personal malignity in the tail,—when the most vapid satires have become the objects of a keen public interest, purely from the number of contemporary characters named in the patch-work notes, (which possess, however, the comparative merit of being more poetical than the text,) and because, to increase the stimulus, the author has sagaciously left his own name for whispers and conjectures.

it rests, they resent the mere refusal of praise as a robbery, and at the justest censures kindle at once into violent and undisciplined abuse; till the acute disease changing into chronical, the more deadly as the less violent, they become the fit instruments of literary detraction and moral slander. They are then no longer to be questioned without exposing the complainant to ridicule, because, forsooth, they are anonymous critics, and authorized, in Andrew Marvell's phrase, as "synodical individuals" to speak of themselves *plurali majestatico*! As if literature formed a caste, like that of the Paras in Hindostan, who, however maltreated, must not dare to deem themselves wronged! As if that, which in all other cases adds a deeper dye to slander, the circumstance of its being anonymous, here acted only to make the slandered inviolable! \* Thus, in part, from the

\* If it were worth while to mix together, as ingredients, half the anecdotes which I either myself know to be true, or which I have received from men incapable of intentional falsehood, concerning the characters, qualifications, and motives of our anonymous critics, whose decisions are oracles for our reading public; I might safely borrow the words of the apocryphal Daniel; "*Give me leave, O SOVEREIGN PUBLIC, and I shall slay this dragon without sword or staff.*" For the compound would be as the "*pitch, and fat, and hair, which Daniel took, and did seethe them together, and made lumps thereof; this he put in the dragon's mouth, and so the dragon burst in sunder; and Daniel said, LO, THESE ARE THE GODS YE WORSHIP.*"

accidental tempers of individuals—(men of undoubted talent, but not men of genius)—tempers rendered yet more irritable by their desire to appear men of genius; but still more effectively by the excesses of the mere counterfeits both of talent and genius; the number too being so incomparably greater of those who are thought to be, than of those who really are men of genius; and in part from the natural, but not therefore the less partial and unjust distinction, made by the public itself between literary and all other property;—I believe the prejudice to have arisen, which considers an unusual irascibility concerning the reception of its products as characteristic of genius.

It might correct the moral feelings of a numerous class of readers, to suppose a Review set on foot, the object of which should be to criticize all the chief works presented to the public by our ribbon-weavers, calico-printers, cabinet-makers, and china-manufacturers; which should be conducted in the same spirit, and take the same freedom with personal character, as our literary journals. They would scarcely, I think, deny their belief, not only that the *genus irritabile* would be found to include many other *species* besides that of bards; but that the irritability of trade would soon reduce the resentments of poets into mere shadow-fights in the comparison. Or is wealth the only rational object of human interest? Or even

if this were admitted, has the poet no property in his works? Or is it a rare, or culpable case, that he who serves at the altar of the Muses, should be compelled to derive his maintenance from the altar, when too he has perhaps deliberately abandoned the fairest prospects of rank and opulence in order to devote himself, an entire and undistracted man, to the instruction or refinement of his fellow-citizens? Or, should we pass by all higher objects and motives, all disinterested benevolence, and even that ambition of lasting praise which is at once the crutch and ornament, which at once supports and betrays, the infirmity of human virtue,—is the character and property of the man, who labours for our intellectual pleasures, less entitled to a share of our fellow feeling, than that of the wine-merchant or milliner? Sensibility indeed, both quick and deep, is not only a characteristic feature, but may be deemed a component part, of genius. But it is not less an essential mark of true genius, that its sensibility is excited by any other cause more powerfully than by its own personal interests; for this plain reason, that the man of genius lives most in the ideal world, in which the present is still constituted by the future or the past; and because his feelings have been habitually associated with thoughts and images, to the number, clearness, and vivacity of which the sensation of self is always in an inverse proportion. And yet, should

he perchance have occasion to repel some false charge, or to rectify some erroneous censure, nothing is more common than for the many to mistake the general liveliness of his manner and language, whatever is the subject, for the effects of peculiar irritation from its accidental relation to himself.\*

For myself, if from my own feelings, or from the less suspicious test of the observations of others, I had been made aware of any literary testiness or jealousy; I trust, that I should have

\* This is one instance among many of deception, by telling the half of a fact, and omitting the other half, when it is from their mutual counteraction and neutralization, that the whole truth arises, as a *tertium aliquid* different from either. Thus in Dryden's famous line

Great wit (meaning genius) to madness sure is near allied.

Now if the profound sensibility, which is doubtless one of the components of genius, were alone considered, single and unbalanced, it might be fairly described as exposing the individual to a greater chance of mental derangement; but then a more than usual rapidity of association, a more than usual power of passing from thought to thought, and image to image, is a component equally essential; and in the due modification of each by the other the genius itself consists; so that it would be just as fair to describe the earth, as in imminent danger of ex-orbitating, or of falling into the sun, according as the assertor of the absurdity confined his attention either to the projectile or to the attractive force exclusively.

been, however, neither silly nor arrogant enough to have burthened the imperfection on genius. But an experience—(and I should not need documents in abundance to prove my words, if I added)—a tried experience of twenty years, has taught me, that the original sin of my character consists in a careless indifference to public opinion, and to the attacks of those who influence it; that praise and admiration have become yearly less and less desirable, except as marks of sympathy; nay that it is difficult and distressing to me to think with any interest even about the sale and profit of my works, important as, in my present circumstances, such considerations must needs be. Yet it never occurred to me to believe or fancy, that the *quantum* of intellectual power bestowed on me by nature or education was in any way connected with this habit of my feelings; or that it needed any other parents or fosterers than constitutional indolence, aggravated into languor by ill-health; the accumulating embarrassments of procrastination; the mental cowardice, which is the inseparable companion of procrastination, and which makes us anxious to think and converse on anything rather than on what concerns ourselves; in fine, all those close vexations, whether chargeable on my faults or my fortunes, which leave me but little grief to spare for evils comparatively distant and alien.

Indignation at literary wrongs I leave to men

born under happier stars. I cannot afford it. But so far from condemning those who can, I deem it a writer's duty, and think it creditable to his heart, to feel and express a resentment proportioned to the grossness of the provocation, and the importance of the object. There is no profession on earth, which requires an attention so early, so long, or so unintermitting as that of poetry; and indeed as that of literary composition in general, if it be such as at all satisfies the demands both of taste and of sound logic. How difficult and delicate a task even the mere mechanism of verse is, may be conjectured from the failure of those, who have attempted poetry late in life. Where then a man has, from his earliest youth, devoted his whole being to an object, which by the admission of all civilized nations in all ages is honourable as a pursuit, and glorious as an attainment; what of all that relates to himself and his family, if only we except his moral character, can have fairer claims to his protection, or more authorize acts of self-defence, than the elaborate products of his intellect and intellectual industry? Prudence itself would command us to show, even if defect or diversion of natural sensibility had prevented us from feeling, a due interest and qualified anxiety for the offspring and representatives of our nobler being. I know it, alas! by woful experience. I have laid too many eggs in the hot sands of this wilderness,

the world, with ostrich carelessness and ostrich oblivion. The greater part indeed have been trod under foot, and are forgotten; but yet no small number have crept forth into life, some to furnish feathers for the caps of others, and still more to plume the shafts in the quivers of my enemies, of them that unprovoked have lain in wait against my soul.

*Sic vos, non vobis, mellificatis, apes!*

SAMUEL TAYLOR COLERIDGE.

## GOOD TEMPER

**I**T is an unreasonable thing some Men expect of their Acquaintance. They are ever complaining that they are out of Order, or displeas'd, or they know not how; and are so far from letting that be a Reason for retiring to their own Homes, that they make it their Argument for coming into Company. What has any Body to do with Accounts of a Man's being indispos'd but his Physician? If a man laments in Company, where the rest are in Humour enough to enjoy themselves, he should not take it ill if a Servant is order'd to present him with a Porringer of Cawdle or Posset-drink, by way of Admonition that he go home to Bed. That Part of Life which we ordinarily understand by the Word Conversation, is an Indulgence to the sociable Part of our Make; and should incline us to bring our Proportion of good Will or good Humour among the Friends we meet with, and not to trouble them with Relations which must of Necessity oblige them to a real or feign'd Affliction. Cares, Distresses, Diseases, Uneasinesses, and Dislikes of our own, are by no Means to be obtruded upon our Friends. If we

would consider how little of this Vicissitude of Motion and Rest, which we call Life, is spent with Satisfaction; we should be more tender of our Friends, than to bring them little Sorrows which do not belong to them. There is no real Life, but chearful Life; therefore Valetudinarians should be sworn, before they enter into Company, not to say a Word of themselves till the Meeting breaks up. It is not here pretended, that we should be always sitting with Chaplets of Flowers round our Heads, or be crowned with Roses, in order to make our Entertainment agreeable to us; but if (as it is usually observed) they who resolve to be merry, seldom are so; it will be much more unlikely for us to be well pleased, if they are admitted who are always complaining they are sad. Whatever we do we should keep up the Chearfulness of our Spirits, and never let them sink below an Inclination at least to be well pleased: The Way to this, is to keep our Bodies in Exercise, our Minds at Ease. That insipid State wherein neither are in Vigour, is not to be accounted any Part of our Portion of Being. When we are in the Satisfaction of some innocent Pleasure, or Pursuit of some laudable Design, we are in the Possession of Life, of human Life. Fortune will give us Disappointments enough, and Nature is attended with Infirmities enough, without our adding to the unhappy Side of our Account by our Spleen or ill

Humour. Poor *Cottilus*, among so many real Evils, a chronical Distemper and a narrow Fortune, is never heard to complain: That equal Spirit of his, which any Man may have that, like him, will conquer Pride, Vanity, and Affectation, and follow Nature, is not to be broken, because it has no Points to contend for. To be anxious for nothing but what Nature demands as necessary, if it is not the way to an Estate, is the way to what Men aim at by getting an Estate. This Temper will preserve Health in the Body, as well as Tranquillity in the Mind. *Cottilus* sees the World in an Hurry, with the same Scorn that a sober Person sees a Man drunk. Had he been contented with what he ought to have been, how could, says he, such a one have met with such a Disappointment? If another had valued his Mistress for what he ought to have loved her, he had not been in her Power: If her Virtue had had a Part of his Passion, her Levity had been his Cure; she could not then have been false and amiable at the same Time.

Since we cannot promise our selves constant Health, let us endeavour at such a Temper as may be our best Support in the Decay of it. *Uranus* has arrived at that Composure of Soul, and wrought himself up to such a Neglect of every thing with which the Generality of Mankind is enchanted, that nothing but acute Pains can give him Disturbance, and against those too

he will tell his intimate Friends he has a Secret which gives him present Ease. *Uranus* is so thoroughly perswaded of another Life, and endeavours so sincerely to secure an Interest in it, that he looks upon Pain but as a quickening of his Pace to an Home, where he shall be better provided for than in his present Apartment. Instead of the melancholy Views which others are apt to give themselves, he will tell you that he has forgot he is mortal, nor will he think of himself as such. He thinks at the Time of his Birth he entered into an eternal Being; and the short Article of Death he will not allow an Interruption of Life, since that Moment is not of half the Duration as is his ordinary Sleep. Thus is his Being one uniform and consistent Series of chearful Diversions and moderate Cares, without Fear or Hope of Futurity. Health to him is more than Pleasure to another Man, and Sickness less affecting to him than Indisposition is to others.

I must confess, if one does not regard Life after this Manner, none but Idiots can pass it away with any tolerable Patience. Take a fine Lady who is of a delicate Frame, and you may observe from the Hour she rises a certain Weariness of all that passes about her. I know more than one who is much too nice to be quite alive. They are sick of such strange frightful People that they meet; one is so awkward and

another so disagreeable, that it looks like a Penance to breathe the same Air with them. You see this is so very true, that a great Part of Ceremony and Good-breeding among the Ladies turns upon their Uneasiness; and I'll undertake, if the How-d'ye Servants of our Women were to make a weekly Bill of Sickness, as the Parish Clerks do of Mortality, you would not find in an Account of Seven Days, one in thirty that was not downright Sick or indisposed, or but a very little better than she was, and so forth.

It is certain, that to enjoy Life and Health as a constant Feast, we should not think Pleasure necessary; but, if possible, to arrive at an Equality of Mind. It is as mean to be overjoy'd upon Occasions of good Fortune, as to be dejected in Circumstances of Distress. Laughter in one Condition, is as unmanly as weeping in the other. We should not form our Minds to expect Transport on every Occasion, but know how to make Enjoyment to be out of Pain. Ambition, Envy, vagrant Desire, or impertinent Mirth will take up our Minds, without we can possess our selves in that Sobriety of Heart which is above all Pleasures, and can be felt much better than described: But the ready Way, I believe, to the right Enjoyment of Life, is by a Prospect towards another to have but a very mean Opinion of it. A great Author of our Time has set this in an Excellent Light, when with a philosophick Pity

of human Life he spoke of it in his Theory of the Earth in the following Manner.

*For what is this Life but a Circulation of little mean Actions? We lie down and rise again, dress and undress, feed and wax hungry, work or play, and are weary, and then we lie down again, and the Circle returns. We spend the Day in Trifles, and when the Night comes we throw our selves into the Bed of Folly, amongst Dreams and broken Thoughts and wild Imaginations. Our Reason lies asleep by us, and we are for the Time as arrant Brutes as those that sleep in the Stalls or in the Field. Are not the Capacities of Man higher than these? and ought not his Ambition and Expectations to be greater? Let us be Adventurers for another World: 'Tis at least a fair and noble Chance; and there is nothing in this worth our Thoughts or our Passions. If we should be disappointed, we are still no worse than the rest of our Fellow-Mortals; and if we succeed in our Expectations, we are eternally happy.*

SIR RICHARD STEELE.

## THE ART OF POLITICAL LYING

WE are told the devil is the father of lies, and was a liar from the beginning; so that, beyond contradiction, the invention is old: and, which is more, his first Essay of it was purely political, employed in undermining the authority of his prince, and seducing a third part of the subjects from their obedience: for which he was driven down from heaven, where (as Milton expresses it) he had been viceroy of a great western province; and forced to exercise his talent in inferior regions among other fallen spirits, poor or deluded men, whom he still daily tempts to his own sin, and will ever do so, till he be chained in the bottomless pit.

But although the devil be the father of lies, he seems, like other great inventors, to have lost much of his reputation by the continental improvements that have been made upon him.

Who first reduced lying into an art, and adapted it to politics, is not so clear from history, although I have made some diligent inquiries. I shall therefore consider it only according to the modern system, as it has been cultivated these twenty years past in the Southern part of our own island.

The poets tell us that, after the giants were overthrown by the gods, the earth in revenge produced her last offspring, which was Fame. And the fable is thus interpreted: that when tumults and seditions are quieted, rumours and false reports are plentifully spread through a nation. So that, by this account, lying is the last relief of a routed, earth-born, rebellious party in a state. But here the moderns have made great additions, applying this art to the gaining of power and preserving it, as well as revenging themselves after they have lost it; as the same instruments are made use of by animals to feed themselves when they are hungry, and to bite those that tread upon them.

But the same genealogy cannot always be admitted for political lying; I shall therefore desire to refine upon it, by adding some circumstances of its birth and parents. A political lie is sometimes born out of a discarded statesman's head, and thence delivered to be nursed and dandled by the rabble. Sometimes it is produced a monster, and licked into shape: at other times it comes into the world completely formed, and is spoiled in the licking. It is often born an infant in the regular way, and requires time to mature it; and often it sees the light in its full growth, but dwindles away by degrees. Sometimes it is of noble birth, and sometimes the spawn of a stock-jobber. Here it screams aloud

at the opening of the womb, and there it is delivered with a whisper. I know a lie that now disturbs half the kingdom with its noise, [of] which, although too proud and great at present to own its parents, I can remember its whisperhood. To conclude the nativity of this monster; when it comes into the world without a sting it is still-born; and whenever it loses its sting it dies.

No wonder if an infant so miraculous in its birth should be destined for great adventures; and accordingly we see it has been the guardian spirit of a prevailing party for almost twenty years. It can conquer kingdoms without fighting, and sometimes with the loss of a battle. It gives and resumes employments; can sink a mountain to a mole-hill, and raise a mole-hill to a mountain; has presided for many years at committees of elections; can wash a blackmoor white; make a saint of an atheist, and a patriot of a profligate; can furnish foreign ministers with intelligence, and raise or let fall the credit of the nation. This goddess flies with a huge looking-glass in her hands, to dazzle the crowd, and make them see, according as she turns it, their ruin in their interest, and their interest in their ruin. In this glass you will behold your best friends, clad in coats powdered with *fleurs de lis* and triple crowns; their girdles hung round with chains, and beads, and wooden shoes; and your worst

enemies adorned with the ensigns of liberty, property, indulgence, moderation, and a cornucopia in their hands. Her large wings, like those of a flying-fish, are of no use but while they are moist; she therefore dips them in the mud, and, soaring aloft, scatters it in the eyes of the multitude, flying with great swiftness; but at every turn is forced to stoop in dirty ways for new supplies.

I have been sometimes thinking, if a man had the art of the second sight for seeing lies, as they have in Scotland for seeing spirits, how admirably he might entertain himself in this town, by observing the different shapes, sizes, and colours of those swarms of lies which buzz about the heads of some people, like flies about a horse's ears in summer; or those legions hovering every afternoon in Exchange-alley, enough to darken the air; or over a club of discontented grandees, and thence sent down in cargoes to be scattered at elections.

There is one essential point wherein a political liar differs from others of the faculty, that he ought to have but a short memory, which is necessary according to the various occasions he meets with every hour of differing from himself and swearing to both sides of a contradiction, as he finds the persons disposed with whom he has to deal. In describing the virtues and vices of mankind, it is convenient, upon every article, to

have some eminent person in our eye, from whom we copy our description. I have strictly observed this rule, and my imagination this minute represents before me a certain great man famous for this talent, to the constant practice of which he owes his twenty years' reputation of the most skilful head in England for the management of nice affairs. The superiority of his genius consists in nothing else but an inexhaustible fund of political lies, which he plentifully distributes every minute he speaks, and by an unparalleled generosity forgets, and consequently contradicts, the next half-hour. He never yet considered whether any proposition were true or false, but whether it were convenient for the present minute or company to affirm or deny it; so that, if you think fit to refine upon him by interpreting everything he says, as we do dreams, by the contrary, you are still to seek, and will find yourself equally deceived whether you believe or not: the only remedy is to suppose that you have heard some inarticulate sounds, without any meaning at all; and besides, that will take off the horror you might be apt to conceive at the oaths wherewith he perpetually tags both ends of every proposition; although, at the same time, I think he cannot with any justice be taxed with perjury when he invokes God and Christ, because he has often fairly given public notice to the world that he believes in neither.

Some people may think that such an accomplishment as this can be of no great use to the owner, or his party, after it has been often practised and is become notorious; but they are widely mistaken. Few lies carry the inventor's mark, and the most prostitute enemy to truth may spread a thousand without being known for the author: besides, as the vilest writer has his readers, so the greatest liar has his believers; and it often happens that, if a lie be believed only for an hour, it has done its work, and there is no farther occasion for it. Falsehood flies, and truth comes limping after it, so that when men come to be undeceived it is too late; the jest is over, and the tale has had its effect: like a man who has thought of a good repartee when the discourse is changed or the company parted; or like a physician who has found out an infallible medicine after the patient is dead.

Considering that natural disposition in many men to lie, and in multitudes to believe, I have been perplexed what to do with that maxim so frequent in everybody's mouth, that truth will at last prevail. Here has this island of ours, for the greatest part of twenty years, lain under the influence of such counsels and persons, whose principle and interest it was to corrupt our manners, blind our understanding, drain our wealth, and in time destroy our constitution both in church and state, and we at last were brought to the very

brink of ruin; yet, by the means of perpetual misrepresentations, have never been able to distinguish between our enemies and friends. We have seen a great part of the nation's money got into the hands of those who, by their birth, education, and merit, could pretend no higher than to wear our liveries; while others, who, by their credit, quality, and fortune, were only able to give reputation and success to the Revolution, were not only laid aside as dangerous and useless, but loaded with the scandal of Jacobites, men of arbitrary principles, and pensioners to France; while truth, who is said to lie in a well, seemed now to be buried there under a heap of stones. But I remember it was a usual complaint among the Whigs, that the bulk of the landed men was not in their interests, which some of the wisest looked on as an ill omen; and we saw it was with the utmost difficulty that they could preserve a majority, while the court and ministry were on their side, till they had learned those admirable expedients for deciding elections and influencing distant boroughs by powerful motives from the city. But all this was mere force and constraint, however upheld by most dexterous artifice and management, until the people began to apprehend their properties, their religion, and the monarchy itself in danger; when we saw them greedily laying hold on the first occasion to interpose. But of this mighty change in the dispositions of the peo-

ple I shall discourse more at large in some following paper: wherein I shall endeavour to undeceive or discover those deluded or deluding persons who hope or pretend it is only a short madness in the vulgar, from which they may soon recover; whereas, I believe it wil appear to be very different in its causes, its symptoms, and its consequences; and prove a great example to illustrate the maxim I lately mentioned, that truth (however sometimes late) will at last prevail.

JONATHAN SWIFT.

## GETTING UP ON COLD MORNINGS

**A**N Italian author—Giulio Cordara, a Jesuit—has written a poem upon insects, which he begins by insisting, that those troublesome and abominable little animals were created for our annoyance, and that they were certainly not inhabitants of Paradise. We of the north may dispute this piece of theology; but on the other hand, it is clear as the snow on the house-tops, that Adam was not under the necessity of shaving; and that when Eve walked out of her delicious bower, she did not step upon ice three inches thick.

Some people say it is a very easy thing to get up of a cold morning. You have only, they tell you, to take the resolution; and the thing is done. This may be very true; just as a boy at school has only to take a flogging, and the thing is over. But we have not at all made up our minds upon it; and we find it a very pleasant exercise to discuss the matter, candidly, before we get up. This at least is not idling, though it may be lying. It affords an excellent answer to those, who ask how lying in bed can be indulged in by a reasoning being,—a rational creature. How? Why with

the argument calmly at work in one's head, and the clothes over one's shoulder. Oh—it is a fine way of spending a sensible, impartial half-hour.

If these people would be more charitable, they would get on with their argument better. But they are apt to reason so ill, and to assert so dogmatically, that one could wish to have them stand round one's bed of a bitter morning, and lie before their faces. They ought to hear both sides of the bed, the inside and out. If they cannot entertain themselves with their own thoughts for half an hour or so, it is not the fault of those who can. If their will is never pulled aside by the enticing arms of imagination, so much the luckier for the stage-coachman.

Candid inquiries into one's decumbency, besides the greater or less privileges to be allowed a man in proportion to his ability of keeping early hours, the work given his faculties, etc., will at least concede their due merits to such representations as the following. In the first place, says the injured but calm appealer, I have been warm all night, and find my system in a state perfectly suitable to a warm-blooded animal. To get out of this state into the cold, besides the inharmonious and uncritical abruptness of the transition, is so unnatural to such a creature, that the poets, refining upon the tortures of the damned, make one of their greatest agonies consist in being suddenly transported from heat to cold,—

from fire to ice. They are "haled" out of their "beds," says Milton, by "harpy-footed furies,"—fellows who come to call them. On my first movement towards the anticipation of getting up, I find that such parts of the sheets and bolster, as are exposed to the air of the room, are stone-cold. On opening my eyes, the first thing that meets them is my own breath rolling forth, as if in the open air, like smoke out of a cottage chimney. Think of this symptom. Then I turn my eyes sideways and see the window all frozen over. Think of that. Then the servant comes in. "It is very cold this morning, is it not?"—"Very cold, Sir."—"Very cold indeed, isn't it?"—"Very cold indeed, Sir."—"More than usually so, isn't it, even for this weather?" (Here the servant's wit and good-nature are put to a considerable test, and the inquirer lies on thorns for the answer.) "Why, Sir . . . I think it *is*." (Good creature! There is not a better, or more truth-telling servant going.) "I must rise, however—get me some warm water."—Here comes a fine interval between the departure of the servant and the arrival of the hot water; during which, of course, it is of "no use" to get up. The hot water comes. "Is it quite hot?"—"Yes, Sir."—"Perhaps too hot for shaving: I must wait a little?"—"No, Sir; it will just do." (There is an over-nice propriety sometimes, an officious zeal of virtue, a little troublesome.) "Oh—the shirt

—you must air my clean shirt;—linen gets very damp this weather.”—“Yes, Sir.” Here another delicious five minutes. A knock at the door. “Oh, the shirt—very well. My stockings—I think the stockings had better be aired too.”—“Very well, Sir.”—Here another interval. At length everything is ready, except myself. I now, continues our incumbent (a happy word, by the bye, for a country vicar)—I now cannot help thinking a good deal—who can?—upon the unnecessary and villainous custom of shaving: it is a thing so unmanly (here I nestle closer)—so effeminate (here I recoil from an unlucky step into the colder part of the bed.)—No wonder that the Queen of France took part with the rebels against the degenerate King, her husband, who first affronted her smooth visage with a face like her own. The Emperor Julian never showed the luxuriancy of his genius to better advantage than in reviving the flowing beard. Look at Cardinal Bembo’s picture—at Michael Angelo’s—at Titian’s—at Shakespeare’s—at Fletcher’s—at Spenser’s—at Chaucer’s—at Alfred’s—at Plato’s—I could name a great man for every tick of my watch.—Look at the Turks, a grave and otiose people.—Think of Haroun Al Raschid and Bed-ridden Hassan.—Think of Wortley Montagu, the worthy son of his mother, a man above the prejudice of his time.—Look at the Persian gentlemen, whom one is ashamed of meeting about

the suburbs, their dress and appearance are so much finer than our own.—Lastly, think of the razor itself—how totally opposed to every sensation of bed—how cold, how edgy, how hard! how utterly different from anything like the warm and circling amplitude, which

Sweetly recommends itself  
Unto our gentle senses.

Add to this, benumbed fingers, which may help you to cut yourself, a quivering body, a frozen towel, and a ewer full of ice; and he that says there is nothing to oppose in all this, only shows, at any rate, that he has no merit in opposing it.

Thomson the poet, who exclaims in his *Seasons*—

Falsely luxurious! Will not man awake?

used to lie in bed till noon, because he said he had no motive in getting up. He could imagine the good of rising; but then he could also imagine the good of lying still; and his exclamation, it must be allowed, was made upon summer-time, not winter. We must proportion the argument to the individual character. A money-getter may be drawn out of his bed by three and four pence; but this will not suffice for a student. A proud man may say, "What shall I think of myself, if I don't get up?" but the more humble one will be content to waive this prodigious notion of

himself, out of respect to his kindly bed. The mechanical man shall get up without any ado at all; and so shall the barometer. An ingenious liar in bed will find hard matter of discussion even on the score of health and longevity. He will ask us for our proofs and precedents of the ill effects of lying later in cold weather; and sophisticate much on the advantages of an even temperature of body; of the natural propensity (pretty universal) to have one's way; and of the animals that roll themselves up, and sleep all the winter. As to longevity, he will ask whether the longest life is of necessity the best; and whether Holborn is the handsomest street in London.

We only know of one confounding, not to say confounded argument, fit to overturn the huge luxury, the "enormous bliss"—of the vice in question. A liar in bed may be allowed to profess a disinterested indifference for his health or longevity; but while he is showing the reasonableness of consulting his own or one person's comfort, he must admit the proportionate claim of more than one; and the best way to deal with him is this, especially for a lady; for we earnestly recommend the use of that sex on such occasions, if not somewhat *over*-persuasive; since extremes have an awkward knack of meeting. First then, admit all the ingeniousness of what he says, telling him that the bar has been deprived of an

excellent lawyer. Then look at him in the most good-natured manner in the world, with a mixture of assent and appeal in your countenance, and tell him that you are waiting breakfast for him; that you never like to breakfast without him; that you really want it too; that the servants want theirs; that you shall not know how to get the house into order, unless he rises; and that you are sure he would do things twenty times worse, even than getting out of his warm bed, to put them all into good humour and a state of comfort. Then, after having said this, throw in the comparatively indifferent matter, to *him*, about his health; but tell him that it is no indifferent matter to you; that the sight of his illness makes more people suffer than one; but that if, nevertheless, he really does feel so very sleepy and so very much refreshed by—— Yet stay; we hardly know whether the frailty of a—— Yes, yes; say that too, especially if you say it with sincerity; for if the weakness of human nature on the one hand and the *vis inertiae* on the other, should lead him to take advantage of it once or twice, good-humour and sincerity form an irresistible junction at last; and are still better and warmer things than pillows and blankets.

Other little helps of appeal may be thrown in, as occasion requires. You may tell a lover, for instance, that lying in bed makes people corpu-

lent; a father, that you wish him to complete the fine manly example he sets his children; a lady, that she will injure her bloom or her shape, which M. or W. admires so much; and a student or artist, that he is always so glad to have done a good day's work, in his best manner.

*Reader.* And pray, Mr. Indicator, how do *you* behave yourself in this respect?

*Indic.* Oh, Madam, perfectly, of course; like all advisers.

*Reader.* Nay, I allow that your mode of argument does not look quite so suspicious as the old way of sermonizing and severity, but I have my doubts, especially from that laugh of yours. If I should look in to-morrow morning—

*Indic.* Ah, Madam, the look in of a face like yours does anything with me. It shall fetch me up at nine, if you please—*six*, I meant to say.

LEIGH HUNT.

## DEATH

**I** THANK God I have not those strait ligaments, or narrow obligations to the World, as to dote on life, or be convulst and tremble at the name of death. Not that I am insensible of the dread and horreur thereof; or by raking into the bowels of the deceased, continual sight of Anatomies, Skeletons, or Cadaverous reliques, like Vespilloes, or Grave-makers, I am become stupid, or have forgot the apprehension of Mortality; but that, marshalling all the horrors, and contemplating the extremities thereof, I find not anything therein able to daunt the courage of a man, much less a well-resolved Christian; and therefore am not angry at the error of our first Parents, or unwilling to bear a part of this common fate, and like the best of them to dye, that is, to cease to breathe, to take a farewell of the elements, to be a kind of nothing for a moment, to be within one instant of a Spirit. When I take a full view and circle of my self without this reasonable moderator, and equal piece of Justice, Death, I do conceive my self the miserablest person extant. Were there not another life that I hope for, all the vanities of this World should

not intreat a moments breath from me: could the Devil work my belief to imagine I could never die, I would not outlive that very thought. I have so abject a conceit of this common way of existence, this retaining to the Sun and Elements, I cannot think this is to be a Man, or to live according to the dignity of humanity. In expectation of a better, I can with patience embrace this life, yet in my best meditations do often defie death: I honour any man that contemns it, nor can I highly love any that is afraid of it: this makes me naturally love a Soldier, and honour those tattered and contemptible Regiments that will die at the command of a Sergeant. For a Pagan there may be some motives to be in love with life; but for a Christian to be amazed at death, I see not how he can escape this Dilemma, that he is too sensible of this life, or hopeless of the life to come.

Some Divines count Adam thirty years old at his Creation, because they suppose him created in the perfect age and stature of man. And surely we are all out of the computation of our age, and every man is some months elder than he bethinks him; for we live, move, have a being, and are subject to the actions of the elements, and the malice of diseases, in that other World, the truest Microcosm, the Womb of our Mother. For besides that general and common existence we are conceived to hold in our Chaos, and whilst we

sleep within the bosome of our causes, we enjoy a being and life in three distinct worlds, wherein we receive most manifest graduations. In that obscure World and Womb of our Mother, our time is short, computed by the Moon, yet longer than the days of many creatures that behold the Sun; our selves being not yet without life, sense, and reason; though for the manifestation of its actions, it awaits the opportunity of objects, and seems to live there but in its root and soul of vegetation. Entiring afterwards upon the scene of the World, we arise up and become another creature, performing the reasonable actions of man, and obscurely manifesting that part of Divinity in us; but not in complement and perfection, till we have once more cast our secondine, that is, this slough of flesh, and are delivered into the last World, that is, that ineffable place of Paul, that proper *ubi* of Spirits. The smattering I have of the Philosophers Stone (which is something more then the perfect exaltation of gold,) hath taught me a great deal of Divinity, and instructed my belief, how that immortal spirit and incorruptible substance of my Soul may lye obscure, and sleep a while within this house of flesh. Those strange and mystical transmigrations that I have observed in Silkworms, turned my Philosophy into Divinity. There is in these works of nature, which seem to puzzle reason, something Divine, and hath

more in it than the eye of a common spectator doth discover.

I am naturally bashful; nor hath conversation, age, or travel, been able to effront or enharden me; yet I have one part of modesty which I have seldom discovered in another, that is, (to speak truly), I am not so much afraid of death, as ashamed thereof. 'Tis the very disgrace and ignominy of our natures, that in a moment can so disfigure us, that our nearest friends, Wife, and Children, stand afraid and start at us: the Birds and Beasts of the field, that before in a natural fear obeyed us, forgetting all allegiance, begin to prey upon us. This very conceit hath in a tempest disposed and left me willing to be swallowed up in the abyss of waters, wherein I had perished unseen, unpityed, without wondering eyes, tears of pity, Lectures of mortality, and none had said,

*Quantum mutatus ab illo!*

Not that I am ashamed of the Anatomy of my parts, or can accuse Nature for playing the bungler in any part of me, or my own vitious life for contracting any shameful disease upon me, whereby I might not call myself as wholesome a morsel for the worms as any.

Some, upon the courage of a fruitful issue, wherein, as in the truest Chronicle, they seem to outlive themselves, can with greater patience

away with death. This conceit and counterfeit subsisting in our progenies seems to me a meer fallacy, unworthy the desires of a man that can but conceive a thought of the next World; who, in a nobler ambition, should desire to live in his substance in Heaven, rather than his name and shadow in the earth. And therefore at my death I mean to take a total adieu of the World, not caring for a Monument, History, or Epitaph, not so much as the bare memory of my name to be found anywhere but in the universal Register of God. I am not yet so Cynical as to approve the Testament of Diogenes; nor do I altogether allow that *Rodomontado* of Lucan,

—*Cælo tegitur, qui non habet urnam.*

He that unburied lies wants not his Herse,  
For unto him a Tomb's the Universe.

but commend in my calmer judgement those ingenuous intentions that desire to sleep by the urns of their Fathers, and strive to go the neatest way unto corruption. I do not envy the temper of Crows and Daws, nor the numerous and weary days of our Fathers before the Flood. If there be any truth in Astrology, I may outlive a Jubilee: as yet I have not seen one revolution of Saturn, nor hath my pulse beat thirty years; and yet, excepting one, have seen the Ashes and left under ground all the Kings of Europe; have been contemporary to three Emperours, four Grand

Signiours, and as many Popes. Methinks I have outlived myself, and begin to be weary of the Sun; I have shaken hands with delight, in my warm blood and Canicular days, I perceive I do anticipate the vices of age; the World to me is but a dream or mock-show, and we all therein but Pantalones and Anticks, to my severer contemplations.

It is not, I confess, an unlawful Prayer to desire to surpass the days of our Saviour, or wish to outlive that age wherein He thought fittest to die; yet if (as Divinity affirms), there shall be no grey hairs in Heaven, but all shall rise in the perfect state of men, we do but outlive those perfections in this World, to be recalled unto them by a greater Miracle in the next, and run on here to be retrograde hereafter. Were there any hopes to outlive vice, or a point to be superannuated from sin, it were worthy our knees to implore the days of Methuselah. But age doth not rectify, but incurvate our natures, turning bad dispositions into worser habits, and like diseases), brings on incurable vices; for every day as we grow weaker in age, we grow stronger in sin, and the number of our days doth but make our sins innumerable. The same vice committed at sixteen, is not the same, though it agree in all other circumstances, at forty, but swells and doubles from the circumstance of our ages; wherein, besides the constant and inexcusable

habit of transgressing, the maturity of our judgment cuts off pretence unto excuse or pardon. Every sin, the oftner it is committed, the more it acquireth in the quality of evil; as it succeeds in time, so it proceeds in degrees of badness; for as they proceed they ever multiply, and, like figures in Arithmetick, the last stands for more than all that went before it. And though I think no man can live well once, but he that could live twice, yet for my own part I would not live over my hours past, or begin again the thread of my days: not upon Cicero's ground, because I have lived them well, but for fear I should live them worse. I find my growing Judgment daily instruct me how to be better, but my untamed affections and confirmed vitiosity makes me daily do worse. I find in my confirmed age the same sins I discovered in my youth; I committed many then, because I was a Child; and because I commit them still, I am yet an infant. Therefore I perceive a man may be twice a Child, before the days of dotage; and stand in need of Æsops Bath before threescore.

And truly there goes a great deal of providence to produce a mans life unto threescore: there is more required than an able temper for those years; though the radical humour contain in it sufficient oil for seventy, yet I perceive in some it gives no light past thirty: men assign not all the causes of long life, that write whole Books

thereof. They that found themselves on the radical balsome, or vital sulphur of the parts, determine not why Abel lived not so long as Adam. There is therefore a secret glome or bottome of our days: 'twas His wisdom to determine them, but His perpetual and waking providence that fulfils and accomplisheth them; wherein the Spirits, ourselves, and all the creatures of God in a secret and disputed way do execute His will. Let *them* not therefore complain of immaturity that die about thirty; they fall but like the whole World, whose solid and well-composed substance must not expect the duration and period of its constitution: when all things are completed in it, its age is accomplished; and the last and general fever may as naturally destroy it before six thousand, as me before forty. There is therefore some other hand that twines the thread of life than that of Nature: we are not onely ignorant in Antipathies and occult qualities; our ends are as obscure as our beginnings; the line of our days is drawn by night, and the various effects therein by a pensil that is invisible; wherein though we confess our ignorance, I am sure we do not err if we say it is the hand of God.

I am much taken with two verses of Lucan, since I have been able not onely, as we do at School, to construe, but understand:

*Victurosque Dei celant, ut vivere durent,  
Felix esse mori.*

We're all deluded, vainly searching ways  
To make us happy by the length of days;  
For cunningly to make's protract this breath,  
The Gods conceal the happiness of Death.

There be many excellent strains in that Poet, wherewith his Stocial Genius hath liberally supplied him; and truely there are singular pieces in the Philosophy of Zeno, the doctrine of the Stoicks, which I perceive, delivered in a Pulpit, pass for current Divinity: yet herein are they in extreams, that can allow a man to be his own Assassine, and so highly extol the end and suicide of Cato. This is indeed not to fear death, but yet to be afraid of life. It is a brave act of valour to contemn death; but where life is more terrible than death, it is then the truest valour to dare to live. And herein Religion hath taught us a noble example; for all the valiant of Curtius, Scevola, or Codrus, do not parallel or match that one of Job; and sure there is no torture to the rack of a disease, nor any Ponyards in death itself like those in the way or prologue to it.

*Emori nolo, sed me esse mortuum nihil curo.*

I would not die, but care not to be dead.  
Were I of Cæsar's Religion, I should be of his

desires, and wish rather to go off at one blow, then to be sawed in pieces by the grating torture of a disease. Men that look no farther than their outsides, think health an appurtenance unto life, and quarrel with their constitutions for being sick; but I, that have examined the parts of man, and know upon what tender filaments that Fabrick hangs, do wonder that we are not always so; and, considering the thousand doors that lead to death, do thank my GOD that we can die but once. 'Tis not only the mischief of diseases, and the villany of poysons, that make an end of us; we vainly accuse the fury of Guns, and the new inventions of death; it is in the power of every hand to destroy us, and we are beholding unto everyone we meet, he doth not kill us. There is therefore but one comfort left, that, though it be in the power of the weakest arm to take away life, it is not in the strongest to deprive us of death: GOD would not exempt Himself from that, the misery of immortality in the flesh, He undertook not that was immortal. Certainly there is no happiness within this circle of flesh, nor is it in the Opticks of these eyes to behold felicity. The first day of our Jubilee is Death; the Devil hath therefore failed of his desires: we are happier with death than we should have been without it: there is no misery but in himself, where there is no end of misery;

and so indeed, in his own sense, the Stoick is in the right. He forgets that he can dye who complains of misery; we are in the power of no calamity while death is in our own.

SIR THOMAS BROWNE.

## SIR ROGER IN THE HUNTING FIELD

**B**ODILY Labour is of two kinds, either that which a Man submits to for his Livelihood, or that which he undergoes for his Pleasure. The latter of them generally changes the Name of Labour for that of Exercise, but differs only from ordinary Labour as it rises from another Motive.

A Country Life abounds in both these kinds of Labour, and for that Reason gives a Man a greater Stock of Health and consequently a more perfect Enjoyment of himself, than any other way of Life. I consider the Body as a System of Tubes and Glands, or to use a more Rustick Phrase, a Bundle of Pipes and Strainers, fitted to one another after so wonderful a manner as to make a proper Engine for the Soul to work with. This Description does not only comprehend the Bowels, Bones, Tendons, Veins, Nerves and Arteries, but every Muscle and every Ligature, which is a Composition of Fibres, that are so many imperceptible Tubes or Pipes interwoven on all sides with invisible Glands or Strainers.

This general Idea of a Human Body, without considering it in its Niceties of Anatomy, lets us see how absolutely necessary Labour is for the

right Preservation of it. There must be frequent Motions and Agitations, to mix, digest, and separate the Juices contained in it, as well as to clear and cleanse that Infinitude of Pipes and Strainers of which it is composed, and to give their solid Parts a more firm and lasting Tone. Labour or Exercise ferments the Humours, casts them into their proper Channels, throws off Redundancies, and helps Nature in those secret Distributions, without which the body cannot subsist in its Vigour, nor the Soul act with Chearfulness.

I might here mention the Effects which this has upon all the Faculties of the Mind, by keeping the Understanding clear, the Imagination untroubled, and refining those Spirits that are necessary for the proper Exertion of our intellectual Faculties, during the present Laws of Union between Soul and Body. It is to a Neglect in this Particular that we must ascribe the Spleen, which is so frequent in Men of studious and sedentary Tempers, as well as the Vapours to which those of the other Sex are so often subject.

Had not Exercise been absolutely necessary for our Well-being, Nature would not have made the Body so proper for it, by giving such an Activity to the Limbs, and such a Pliancy to every Part as necessarily produce those Compressions, Extensions, Contortions, Dilatations, and all other kinds of Motions that are necessary

for the Preservation of such a System of Tubes and Glands as has been before mentioned. And that we might not want Inducements to engage us in such an Exercise of the Body as is proper for its Welfare, it is so ordered that nothing valuable can be procured without it. Not to mention Riches and Honour, even Food and Raiment are not to be come at without the Toil of the Hands and Sweat of the Brows. Providence furnishes Materials, but expects that we should work them up ourselves. The Earth must be laboured before it gives its Encrease, and when it is forced into its several Products, how many Hands must they pass through before they are fit for Use? Manufactures, Trade, and Agriculture, naturally employ more than nineteen Parts of the Species in twenty; and as for those who are not obliged to Labour, by the Condition in which they are born, they are more miserable than the rest of Mankind, unless they indulge themselves in that voluntary Labour which goes by the Name of Exercise.

My Friend Sir Roger has been an indefatigable Man in Business of this kind, and has hung several Parts of his House with the Trophies of his former Labours. The Walls of his great Hall are covered with the Horns of several kinds of Deer that he has killed in the Chace, which he thinks the most valuable Furniture of his House, as they afford him frequent Topicks of Discourse,

and shew that he has not been Idle. At the lower end of the Hall, is a large Otter's Skin stuffed with Hay, which his Mother ordered to be hung up in that manner, and the Knight looks upon with great Satisfaction, because it seems he was but nine Years old when his Dog killed him. A little Room adjoining to the Hall is a kind of Arsenal filled with Guns of several Sizes and Inventions, with which the Knight has made great Havock in the Woods, and destroyed many thousands of Pheasants, Partridges and Wood-Cocks. His Stable Doors are patched with Noses that belonged to Foxes of the Knight's own hunting down. Sir Roger showed me one of them that for Distinction sake has a Brass Nail stuck through it, which cost him about fifteen Hours riding, carried him through half a dozen Counties, killed him a brace of Geldings, and lost above half his Dogs. This the Knight looks upon as one of the greatest Exploits of his Life. The perverse Widow, whom I have given some account of, was the Death of several Foxes; For Sir Roger has told me that in the Course of his Amours he patched the Western Door of his Stable. Whenever the Widow was cruel, the Foxes were sure to pay for it. In proportion as his Passion for the Widow abated, and old Age came on, he left off Fox-hunting; but a Hare is not yet safe that sits within Ten Miles of his House.

There is no kind of Exercise which I would so recommend to my Readers of both Sexes as this of Riding, as there is none which so much conduces to Health, and is every way accommodated to the body, according to the *Idea* which I have given of it. Doctor *Sydenham* is very lavish in its Praises; and if the *English* Reader would see the Mechanical Effects of it described at length, he may find them in a Book published not many Years since, under the Title of *Medicina Gymnastica*. For my own part, when I am in Town, for want of these opportunities, I exercise myself an Hour every Morning upon a dumb Bell that is placed in a Corner of my Room, and pleases me the more because it does everything I require of it in the most profound Silence. My Landlady and her Daughters are so well acquainted with my Hours of Exercise, that they never come into my Room to disturb me whilst I am ringing.

When I was some Years younger than I am at present, I used to employ myself in a more labourious Diversion, which I learned from a *Latin* Treatise of Exercises that is written with great Erudition: It is there called the *σκομμαχαί*, or the Fighting with a Man's own Shadow; and consists in the brandishing of two short Sticks grasped in each Hand, and Loaden with Plugs or Lead at either end. This opens the Chest, exercises the Limbs, and gives a Man all the

Pleasure of Boxing, without the Blows. I could wish that several Learned Men would lay out that Time which they employ in Controversies and Disputes about nothing, in *this method* of fighting with their own Shadows. It might conduce very much to evaporate the Spleen, which makes them uneasy to the Publick as well as to themselves.

To conclude, As I am a Compound of Soul and Body, I consider myself as obliged to a double Scheme of Duties; and think I have not fulfilled the Business of the Day, when I do not thus employ the one in Labour and Exercise, as well as the other in Study and Contemplation.

JOSEPH ADDISON.

## LEONARDO DA VINCI

CURIOSITY and the desire of beauty—these are the two elementary forces in Leonardo's genius; curiosity, often in conflict with the desire of beauty but generating, in union with it, a type of subtle and curious grace.

The movement of the fifteenth century was two-fold; partly the Renaissance, partly also the coming of what is called the "modern spirit," with its realism, its appeal to experience. It comprehended a return to antiquity, and a return to nature. Raphael represents the return to antiquity, and Leonardo the return to nature. In this return to nature, he was seeking to satisfy a boundless curiosity by her perpetual surprises, a microscopic sense of finish by her *finesse*, or delicacy of operation, that *subtilitas naturæ* which Bacon notices. So we find him often in intimate relations with men of science,—with Fra Luca Paccioli the mathematician, and the anatomist Marc Antonio della Torre. His observations and experiments fill thirteen volumes of manuscript; and those who can judge describe him as anticipating long before, by rapid intuition, the later ideas of science. He explained

the obscure light of the unilluminated part of the moon, knew that the sea had once covered the mountains which contain shells, and of the gathering of the equatorial waters above the polar.

He who thus penetrated into the most secret parts of nature preferred always the more to the less remote, what, seeming exceptional, was an instance of law more refined, the construction about things of a peculiar atmosphere and mixed lights. He paints flowers with such curious felicity that different writers have attributed to him a fondness for particular flowers, as Clement the cyclamen, and Rio the jasmin; while, at Venice, there is a stray leaf from his portfolio dotted all over with studies of violets and the wild rose. In him first appears the taste for what is *bizarre* or *recherché* in landscape; hollow places full of the green shadow of bituminous rocks, ridged reefs of trap-rock which cut the water into quaint sheets of light,—their exact antitype is in our own western seas; all the solemn effects of moving water. You may follow it springing from its distant source among the rocks on the heath of the *Madonna of the Balances*, passing, as a little fall, into the treacherous calm of the *Madonna of the Lake*, as a goodly river next, below the cliffs of the *Madonna of the Rocks*, washing the white walls of its distant villages, stealing out in a network of divided

streams in *La Gioconda* to the seashore of the *Saint Anne*—that delicate place, where the wind passes like the hand of some fine etcher over the surface, and the untorn shells are lying thick upon the sand, and the tops of the rocks, to which the waves never rise, are green with grass, grown fine as hair. It is the landscape, not of dreams or of fancy, but of places far withdrawn, and hours selected from a thousand with a miracle of *finesse*. Through Leonardo's strange veil of sight things reach him so; in no ordinary night or day, but as in faint light of eclipse, or in some brief interval of falling rain at daybreak, or through deep water.

And not into nature only; but he plunged also into human personality, and became above all a painter of portraits; faces of a modelling more skilful than has been seen before or since, embodied with a reality which almost amounts to illusion, on the dark air. To take a character as it was, and delicately sound its stops, suited one so curious in observation, curious in invention. He painted thus the portraits of Ludovico's mistresses, Lucretia Crivelli and Cecilia Galerani the poetess, of Ludovico himself, and the Duchess Beatrice. The portrait of Cecilia Galerani is lost, but that of Lucretia Crivelli has been identified with *La Belle Feronière* of the Louvre, and Ludovico's pale, anxious face still remains in the

Ambrosian library. Opposite is the portrait of Beatrice d'Este, in whom Leonardo seems to have caught some presentiment of early death, painting her precise and grave, full of the refinement of the dead, in sad earth-coloured raiment, set with pale stones.

Sometimes this curiosity came in conflict with the desire of beauty; it tended to make him go too far below that outside of things in which art really begins and ends. This struggle between the reason and its ideas, and the senses, the desire of beauty, is the key to Leonardo's life at Milan—restlessness, his endless re-touchings, his odd experiments with colour. How much must he leave unfinished, how much recommence! His problem was the transmutation of ideas into images. What he had attained so far had been the mastery of that earlier Florentine style, with its naive and limited sensuousness. Now he was to entertain in this narrow medium those divinations of a humanity too wide for it, that larger vision of the opening world, which is only not too much for the great, irregular art of Shakespeare; and everywhere the effort is visible in the work of his hands. This agitation, this perpetual delay, give him an air of weariness and *ennui*. To others he seems to be aiming at an impossible effect, to do something that art, that painting, can never do. Often the expression of physical beauty at this

or that point seems strained and marred in the effort, as in those heavy German foreheads—too heavy and German for perfect beauty.

For there was a touch of Germany in that genius which, as Goethe said, had “thought itself weary”—*müde sich gedacht*. What an anticipation of modern Germany, for instance, in that debate on the question whether sculpture or painting is the nobler art! \* But there is this difference between him and the German, that, with all that curious science, the German would have thought nothing more was needed. The name of Goethe himself reminds one how great for the artist may be the danger of over-much science; how Goethe, who in the *Elective Affinities* and the first part of *Faust*, does transmute ideas into images, who wrought many such transmutations, did not invariably find the spell-word, and in the second part of *Faust* presents us with a mass of science which has almost no artistic character at all. But Leonardo will never work till the happy moment comes—that moment of *bien-être*, which to imaginative men is a moment of invention. On this he waits with a perfect patience; other moments are but a preparation, or after-taste of it. Few men distinguish between them as jealously as he. Hence so many flaws even in the choicest

\* How princely, how characteristic of Leonardo, the answer, *Quanto più, un' arte porta seco fatica di corpo, tanto più è vile!*

work. But for Leonardo the distinction is absolute, and, in the moment of *bien-être*, the alchemy complete: the idea is stricken into colour and imagery: a cloudy mysticism is refined to a subdued and graceful mystery, and painting pleases the eye while it satisfies the soul.

This curious beauty is seen above all in his drawings, and in these chiefly in the abstract grace of the bounding lines. Let us take some of these drawings, and pause over them awhile; and, first, one of those at Florence—the heads of a woman and a little child, set side by side, but each in its own separate frame. First of all, there is much pathos in the reappearance, in the fuller curves of the face of the child, of the sharper, more chastened lines of the worn and older face, which leaves no doubt that the heads are those of a little child and its mother. A feeling for maternity is indeed always characteristic of Leonardo; and this feeling is further indicated here by the half-humorous pathos of the diminutive, rounded shoulders of the child. You may note a like pathetic power in drawings of a young man, seated in a stooping posture, his face in his hands, as in sorrow; of a slave sitting in an uneasy inclined attitude, in some brief interval of rest; of a small Madonna and Child, peeping sideways in half-reassured terror, as a mighty griffin with batlike wings, one of Leonardo's finest *inventions*, descends suddenly from the air to snatch

up a great wild beast wandering near them. But note in these, as that which especially belongs to art, the contour of the young man's hair, the poise of the slave's arm above his head, and the curves of the head of the child, following the little skull within, thin and fine as some sea-shell worn by the wind.

Take again another head, still more full of sentiment, but of a different kind, a little drawing in red chalk which every one will remember who has examined at all carefully the drawings by old masters at the Louvre. It is a face of doubtful sex, set in the shadow of its own hair, the cheek-line in high light against it, with something voluptuous and full in the eye-lids and the lips. Another drawing might pass for the same face in childhood with parched and feverish lips, but much sweetness in the loose, short-waisted childish dress, with necklace and *bullæ*, and in the daintily bound hair. We might take the thread of suggestion which these two drawings offer, when thus set side by side, and, following it through the drawings at Florence, Venice, and Milan, construct a sort of series, illustrating better than anything else Leonardo's type of womanly beauty. Daughters of Herodias, with their fantastic head-dresses knotted and folded so strangely to leave the dainty oval of the face disengaged, they are not of the Christian family, or of Raphael's. They are the clairvoyants, through whom, as through

delicate instruments, one becomes aware of the subtler forces of nature, and the modes of their action, all that is magnetic in it, all those finer conditions wherein material things rise to that subtlety of operation which constitutes them spiritual, where only the final nerve and the keener touch can follow. It is as if in certain significant examples we actually saw those forces at their work on human flesh. Nervous, electric, faint always with some inexplicable faintness, these people seem to be subject to exceptional conditions, to feel powers at work in the common air unfelt by others, to become, as it were, the receptacle of them, and pass them on to us in a chain of secret influences.

But among the more youthful heads there is one at Florence which Love chooses for its own—the head of a young man, which may well be the likeness of Andrea Salaino, beloved of Leonardo for his curled and waving hair—*belli capelli ricci e inanellati*—and afterwards his favourite pupil and servant. Of all the interests in living men and women which may have filled his life at Milan, this attachment alone is recorded. And in return Salaino identified himself so entirely with Leonardo, that the picture of *Saint Anne*, in the Louvre, has been attributed to him. It illustrates Leonardo's usual choice of pupils, men of some natural charm of person or intercourse like Salaino, or men of birth and princely habits of

life like Francesco Melzi—men with just enough genius to be capable of initiation into his secret, for the sake of which they were ready to efface their own individuality. Among them, retiring often to the villa of the Melzi at *Canonica al Vaprio*, he worked at his fugitive manuscripts and sketches, working for the present hour, and for a few only, perhaps chiefly for himself. Other artists have been as careless of present or future applause, in self-forgetfulness, or because they set moral or political ends above the ends of art; but in him this solitary culture of beauty seems to have hung upon a kind of self-love, and a carelessness in the work of art of all but art itself. Out of the secret places of a unique temperament he brought strange blossoms and fruits hitherto unknown; and for him, the novel impression conveyed, the exquisite effect woven, counted as an end in itself—a perfect end.

And these pupils of his acquired his manner so thoroughly, that though the number of Leonardo's authentic works is very small indeed, there is a multitude of other men's pictures through which we undoubtedly see him, and come very near to his genius. Sometimes, as in the little picture of the *Madonna of the Balances*, in which, from the bosom of His mother, Christ weighs the pebbles of the brook against the sins of men, we have a hand, rough enough by contrast, working upon some fine hint or sketch of

his. Sometimes, as in the subjects of the *Daughter of Herodias* and the *Head of John the Baptist*, the lost originals have been re-echoed and varied upon again and again by Luini and others. At other times the original remains, but has been a mere theme or motive, a type of which the accessories might be modified or changed; and these variations have but brought out the more the purpose, or expression of the original. It is so with the so-called *Saint John the Baptist* of the Louvre—one of the few naked figures Leonardo painted—whose delicate brown flesh and woman's hair no one would go out into the wilderness to seek, and whose treacherous smile would have us understand something far beyond the outward gesture or circumstance. But the long, reedlike cross in the hand, which suggests Saint John the Baptist, becomes faint in a copy at the Ambrosian Library, and disappears altogether in another version, in the *Palazzo Rosso* at Genoa. Returning from the latter to the original, we are no longer surprised by Saint John's strange likeness to the *Bacchus* which hangs near it, and which set Théophile Gautier thinking of Heine's notion of decayed gods, who, to maintain themselves, after the fall of paganism, took employment in the new religion. We recognize one of those symbolical inventions in which the ostensible subject is used, not as matter for definite pictorial realization, but as the

starting-point of a train of sentiment, subtle and vague as a piece of music. No one ever ruled over the mere *subject* in hand more entirely than Leonardo, or bent it more dexterously to purely artistic ends. And so it comes to pass that though he handles sacred subjects continually, he is the most profane of painters; the given person or subject, Saint John in the Desert, or the Virgin on the knees of Saint Anne, is often merely the pretext for a kind of work which carries one altogether beyond the range of its conventional associations.

About the *Last Supper*, its decay and restorations, a whole literature has risen up, Goethe's pensive sketch of its sad fortunes being perhaps the best. The death in childbirth of the Duchess Beatrice was followed in Ludovico by one of those paroxysms of religious feeling which in him were constitutional. The low, gloomy Dominican church of *Saint Mary of the Graces* had been the favourite oratory of Beatrice. She had spent her last days there, full of sinister presentiments; at last it had been almost necessary to remove her from it by force; and now it was here that mass was said a hundred times a day for her repose. On the damp wall of the refectory, oozing with mineral salts, Leonardo painted the *Last Supper*. Effective anecdotes were told about it, his retouchings and delays. They show him refusing to work except at the moment of invention,

scornful of anyone who supposed that art could be a work of mere industry and rule, often coming the whole length of Milan to give a single touch. He painted it, not in fresco, where all must be *impromptu*, but in oils, the new method which he had been one of the first to welcome, because it allowed of so many afterthoughts, so refined a working out of perfection. It turned out that on a plastered wall no process could have been less durable. Within fifty years it had fallen into decay. And now we have to turn back to Leonardo's own studies, above all to one drawing of the central head at the *Brera*, which, in a union of tenderness and severity in the face-lines, reminds one of the monumental work of Mino da Fiesole, to trace it as it was.

Here was another effort to lift a given subject out of the range of its traditional associations. Strange, after all the mystic developments of the middle age, was the effort to see the Eucharist, not as the pale Host of the altar, but as one taking leave of his friends. Five years afterwards the young Raphael, at Florence, painted it with sweet and solemn effect in the refectory of Saint Onofrio; but still with all the mystical unreality of the school of Perugino. Vasari pretends that the central head was never finished. But finished or unfinished, or owing part of its effect to a mellowing decay, the head of Jesus does but consummate the sentiment of the

whole company—ghosts through which you see the wall, faint as the shadows of the leaves upon the wall on autumn afternoons. This figure is but the faintest, the most spectral of them all.

The *Last Supper* was finished in 1497; in 1498 the French entered Milan, and whether or not the Gascon bowmen used it as a mark for their arrows, the model of Francesco Sforza certainly did not survive. What, in that age, such work was capable of being—of what nobility, amid what racy truthfulness to fact—we may judge from the bronze statue of Bartolomeo Colleoni on horseback, modelled by Leonardo's master, Verrocchio (he died of grief, it was said, because, the mould accidentally failing, he was unable to complete it), still standing in the *piazza* of Saint John and Saint Paul at Venice. Some traces of the thing may remain in certain of Leonardo's drawings, and perhaps also, by a singular circumstance, in a far-off town of France. For Ludovico became a prisoner, and ended his days at Loches in Touraine. After many years of captivity in the dungeons below, where all seems sick with barbarous feudal memories, he was allowed at last, it is said, to breathe fresher air for a while in one of the rooms of the great tower still shown, its walls covered with strange painted arabesques, ascribed by tradition to his hand, amused a little, in this way, through the tedious years. In those vast helmets

and human faces and pieces of armour, among which, in great letters, the motto *Infelix Sum* is woven in and out, it is perhaps not too fanciful to see the fruit of a wistful after-dreaming over Leonardo's sundry experiments on the armed figure of the great duke, which had occupied the two so much during the days of their good fortune at Milan.

The remaining years of Leonardo's life are more or less years of wandering. From his brilliant life at court he had saved nothing, and he returned to Florence a poor man. Perhaps necessity kept his spirit excited: the next four years are one prolonged rapture of ecstasy of invention. He painted now the pictures of the Louvre, his most authentic works, which came there straight from the cabinet of Francis the First, at Fontainebleau. One picture of his, the *Saint Anne*—not the *Saint Anne* of the Louvre, but a simple cartoon, now in London—revived for a moment a sort of appreciation more common in an earlier time, when good pictures had still seemed miraculous. For two days a crowd of people of all qualities passed in naive excitement through the chamber where it hung, and gave Leonardo a taste of the "triumph" of Cimabue. But his work was less with the saints than with the living women of Florence. For he lived still in the polished society that he loved, and in the houses of Florence, left perhaps a little subject to light

thoughts by the death of Savonarola—the latest gossip (1869) is of an undraped Monna Lisa, found in some out-of-the-way corner of the late *Orleans* collection—he saw Ginevra di Benci, and Lisa, the young third wife of Francesco del Giocondo. As we have seen him using incidents of sacred story, not for their own sake, nor as mere subjects for pictorial realization, but as a cryptic language for fancies all his own, so now he found a vent for his thought in taking one of these languid women, and raising her, as Leda or Pomona, as Modesty or Vanity, to the seventh heaven of symbolical expression.

*La Gioconda* is, in the truest sense, Leonardo's masterpiece, the revealing instance of his mode of thought and work. In suggestiveness, only the *Melancholia* of Dürer is comparable to it; and no crude symbolism disturbs the effect of its subdued and graceful mystery. We all know the face and hands of the figure, set in its marble chair, in that circle of fantastic rocks, as in some faint light under sea. Perhaps of all ancient pictures time has chilled it least.\* As often happens with works in which invention seems to reach its limit, there is an element in it given to, not invented by, the master. In that inestimable folio of drawings, once in the possession of Vasari, were certain designs by Verrocchio, faces

\* Yet for Vasari there was further magic of crimson in the lips and cheeks, lost for us.

of such impressive beauty that Leonardo in his boyhood copied them many times. It is hard not to connect with these designs of the elder, by-past master, as with its germinal principle, the unfathomable smile, always with a touch of something sinister in it, which plays over all Leonardo's work. Besides, the picture is a portrait. From childhood we see this image defining itself on the fabric of his dreams, and but for express historical testimony, we might fancy that this was but his ideal lady, embodied and beheld at last. What was the relationship of a living Florentine to this creature of his thought? By what strange affinities had the dream and the person grown up thus apart, and yet so closely together? Present from the first incorporeally in Leonardo's brain, dimly traced in the designs of Verrocchio, she is found present at last in *Il Giocondo's* house. That there is much of mere portraiture in the picture is attested by the legend that by artificial means, the presence of mimes and flute-players, that subtle expression was protracted on the face. Again, was it in four years and by renewed labour never really completed, or in four months and as by stroke of magic, that the image was projected?

The presence that rose thus so strangely beside the waters, is expressive of what in the ways of a thousand years men had come to desire. Hers is the head upon which all "the ends of the world

are come," and the eyelids are a little weary. It is a beauty wrought out from within upon the flesh, the deposit, little cell by cell, of strange thoughts and fantastic reveries and exquisite passions. Set it for a moment beside one of those white Greek goddesses or beautiful women of antiquity, and how would they be troubled by this beauty, into which the soul with all its maladies has passed! All the thoughts and experience of the world have etched and moulded there, in that which they have of power to refine and make expressive the outward form, the animalism of Greece, the lust of Rome, the mysticism of the middle age with its spiritual ambition and imaginative loves, the return of the Pagan world, the sins of the Borgias. She is older than the rocks among which she sits; like the vampire, she has been dead many times, and learned the secrets of the grave; and has been a diver in deep seas, and keeps their fallen day about her; and trafficked for strange webs with Eastern merchants, and, as Leda, was the mother of Helen of Troy, and, as Saint Anne, the mother of Mary; and all this has been to her but as the sound of lyres and flutes, and lives only in the delicacy with which it has moulded the changing lineaments, and tinged the eyelids and the hands. The fancy of a perpetual life, sweeping together ten thousand experiences, is an old one; and modern philosophy has conceived the idea of

humanity as wrought upon by, and summing up in itself, all modes of thought and life. Certainly Lady Lisa might stand as the embodiment of the old fancy, the symbol of the modern idea.

During these years at Florence Leonardo's history is the history of his art; for himself, he is lost in the bright cloud of it. The outward history begins again in 1502, with a wild journey through central Italy, which he makes as the chief engineer of Cæsar Borgia. The biographer, putting together the stray jottings of his manuscripts, may follow him through every day of it, up the strange tower of Siena, elastic like a bent bow, down to the seashore at Piombino, each place appearing as fitfully as in a fever dream.

One other great work was left for him to do, a work all trace of which soon vanished, *The Battle of the Standard*, in which he had Michelangelo for his rival. The citizens of Florence, desiring to decorate the walls of the great council-chamber, had offered the work for competition, and any subject might be chosen from the Florentine wars of the fifteenth century. Michelangelo chose for his cartoon an incident of the war with Pisa, in which the Florentine soldiers, bathing in the Arno, are surprised by the sound of trumpets, and run to arms. His design has reached us only in an old engraving, which helps us less perhaps than our remembrance of the background of his *Holy Family* in the *Uffizi* to

imagine in what superhuman form, such as might have beguiled the heart of an earlier world, those figures ascended out of the water. Leonardo chose an incident from the battle of Anghiari, in which two parties of soldiers fight for a standard. Like Michelangelo's, his cartoon is lost, and has come to us only in sketches, and in a fragment of Rubens. Through the accounts given we may discern some lust of terrible things in it, so that even the horses tore each other with their teeth. And yet one fragment of it, in a drawing of his at Florence, is far different—a waving field of lovely armour, the chased edgings running like lines of sunlight from side to side. Michelangelo was twenty-seven years old; Leonardo more than fifty; and Raphael, then nineteen years of age, visiting Florence for the first time, came and watched them as they worked.

WALTER PATER.

## THE SERPENT MYTH

**I**N the serpent we approach the source of a group of myths, world-wide, founded on great and common human instincts, respecting which I must note one or two points which bear intimately on all our subject. For it seems to me that the scholars who are at present occupied in interpretation of human myths have most of them forgotten that there are any such things as natural myths, and that the dark sayings of men may be both difficult to read, and not always worth reading, but the dark sayings of nature will probably become clearer for the looking into, and will very certainly be worth reading. And, indeed, all guidance to the right sense of the human and variable myths will probably depend on our first getting at the sense of the natural and invariable ones. The dead hieroglyph may have meant this or that; the living hieroglyph means always the same; but remember, it is just as much a hieroglyph as the other; nay, more,—a “sacred or reserved sculpture,” a thing with an inner language. The serpent crest of the king’s crown, or of the god’s, on the pillars of Egypt, is a mystery, but the serpent itself,

gliding past the pillar's foot, is it less a mystery? Is there, indeed, no tongue, except the mute forked flash from its lips, in that running brook of horror on the ground?

Why that horror? We all feel it, yet how imaginative it is, how disproportioned to the real strength of the creature! There is more poison in an ill-kept drain, in a pool of dish-washing at a cottage door, than in the deadliest asp of Nile. Every back yard which you look down into from the railway as it carries you out by Vauxhall or Deptford, holds its coiled serpent; all the walls of those ghastly suburbs are enclosures of tank temples for serpent worship; yet you feel no horror in looking down into them as you would if you saw the livid scales, and lifted head. There is more venom, mortal, inevitable, in a single word, sometimes, or in the gliding entrance of a wordless thought than ever "*vanti Libia con sua rena.*" But that horror is of the myth, not of the creature. There are myriads lower than this, and more loathsome, in the scale of being; the links between dead matter and animation drift everywhere unseen. But it is the strength of the base element that is so dreadful in the serpent; it is the very omnipotence of the earth. That rivulet of smooth silver, how does it flow, think you? It literally rows on the earth, with every scale for an oar; it bites the dust with the ridges of its body. Watch it, when it moves

slowly. A wave, but without wind! a current, but with no fall! all the body moving at the same instant, yet some of it to one side, some to another, or some forward, and the rest of the coil backwards, but all with the same calm will and equal way, no contraction, no extension; one soundless, causeless, march of sequent rings, and spectral processions of spotted dust, with dissolution in its fangs, dislocation in its coils. Startle it, the winding stream will become a twisted arrow; the wave of poisoned life will lash through the grass like a cast lance.\* It scarcely breathes with its one lung (the other shrivelled and abortive); it is passive to the sun and shade, and is cold or hot like a stone; yet "it can outclimb the monkey, outswim the fish, outleap the zebra,

\*I cannot understand this swift forward motion of serpents. The seizure of prey by the constrictor, though invisibly swift, is quite simple in mechanism; it is simply the return to its coil of an opened watch-spring, and is just as instantaneous. But the steady and continuous motion, without a visible fulcrum (for the whole body moves at the same instant, and I have often seen even small snakes glide as fast as I could walk), seems to involve a vibration of the scales quite too rapid to be conceived. The motion of the crest and dorsal fin of the hippocampus, which is one of the intermediate types between serpent and fish, perhaps gives some resemblance of it, dimly visible, for the quivering turns the fin into a mere mist. The entrance of the two barbs of a bee's sting by alternate motion, "the teeth of one barb acting as a fulcrum for the other," must be something like the serpent motion on a small scale.

outwrest the athlete, and crush the tiger." \* It is a divine hieroglyph of the demoniac power of the earth, of the entire earthly nature. As the bird is the clothed power of the air, so this is the clothed power of the dust; as the bird the symbol of the spirit of life, so this of the grasp and sting of death.

Hence the continual change in the interpretation put upon it in various religions. As the worm of corruption, it is the mightiest of all adversaries of the gods—the special adversary of their light and creative power—Python against Apollo. As the power of the earth against the air, the giants are serpent-bodied in the Gigantomachia; but as the power of the earth upon the seed—consuming it into new life ("that which thou sowest is not quickened except it die")—serpents sustain the chariot of the spirit of agriculture.

Yet on the other hand, there is a power in the earth to take away corruption, and to purify (hence the very fact of burial, and many uses of earth, only lately known): and in this sense the serpent is a healing spirit,—the representative of *Æsculapius*, and of *Hygieia*; and is a sacred earth-type in the temple of the Dew, being there especially a symbol of the native earth of Athens; so that its departure from the temple was a sign to the Athenians that they were to leave their

\* Richard Owen.

homes. And then, lastly, as there is a strength and healing in the earth, no less than the strength of air, so there is conceived to be a wisdom of earth no less than a wisdom of the spirit; and when its deadly power is killed, its guiding power becomes true; so that the Python serpent is killed at Delphi, where yet the oracle is from the breath of the earth.

You must remember, however, that in this, as in every other instance, I take the myth at its central time. This is only the meaning of the serpent to the Greek mind which could conceive an Athena. Its first meaning to the nascent eyes of men, and its continued influence over degraded races, are subjects of the most fearful mystery. Mr. Fergusson has just collected the principal evidence bearing on the matter in a work of very great value, and if you read his opening chapters, they will put you in possession of the circumstances needing chiefly to be considered. I cannot touch upon any of them here, except only to point out that, though the doctrine of the so-called "corruption of human nature," asserting that there is nothing but evil in humanity, is just as blasphemous and false as a doctrine of the corruption of physical nature would be, asserting there was nothing but evil in the earth,—there is yet the clearest evidence of a disease, plague, or cretinous imperfection of development, hitherto allowed to prevail against

the greater part of the races of men; and this in monstrous ways, more full of mystery than the serpent-being itself. I have gathered for you to-night only instances of what is beautiful in Greek religion; but even in its best time there were deep corruptions in other phases of it, and degraded forms of many of its deities, all originating in a misunderstood worship of the principle of life; while in the religions of lower races, little less than these corrupted forms of devotion can be found, all having a strange and dreadful consistency with each other, and infecting Christianity, even at its strongest periods, with fatal terror of doctrine, and ghastliness of symbolic conception, passing through fear into frenzied grotesque, and thence into sensuality.

In the Psalter of St. Louis itself, half of its letters are twisted snakes; there is scarcely a wreathed ornament, employed in Christian dress, or architecture, which cannot be traced back to the serpent's coil; and there is rarely a piece of monkish decorated writing in the world that is not tainted with some ill-meant vileness of grotesque,—nay, the very leaves of the twisted ivy-pattern of the fourteenth century can be followed back to wreaths for the foreheads of bacchanalian gods. And truly, it seems to me, as I gather in my mind the evidences of insane religion, degraded art, merciless war, sullen toil, detestable pleasure, and vain or vile hope, in which the na-

tions of the world have lived since first they could bear record of themselves—it seems to me, I say, as if the race itself were still half-serpent, not extricated yet from its clay; a lacertine breed of bitterness—the glory of it emaciate with cruel hunger, and blotted with venomous stain; and the track of it, on the leaf a glittering slime, and in the sand a useless furrow.

There are no myths, therefore, by which the moral state and fineness of intelligence of different races can be so deeply tried or measured, as by those of the serpent and the bird; both of them having an especial relation to the kind of remorse for sin, or for grief in fate, of which the national minds that spoke by them had been capable. The serpent and vulture are alike emblems of immortality and purification among races which desired to be immortal and pure; and as they recognize their own misery, the serpent becomes to them the scourge of the Furies, and the vulture finds its eternal prey in their breast. The bird long contests among the Egyptians with the still received serpent symbol of power. But the Draconian image of evil is established in the serpent Apap; while the bird's wings, with the globe, become part of a better symbol of deity, and the entire form of the vulture, as an emblem of purification, is associated with the earliest conception of Athena. In the type of the dove with the olive branch, the conception of the spirit of

Athena in renewed life prevailing over ruin is embodied for the whole of futurity; while the Greeks, to whom, in a happier climate and higher life than that of Egypt, the vulture symbol of cleansing became unintelligible, took the eagle instead for their hieroglyph of supreme spiritual energy, and it thenceforward retains its hold on the human imagination, till it is established among Christian myths as the expression of the most exalted form of evangelistic teaching. The special relation of Athena to her favourite bird we will trace presently; the peacock of Hera, and dove of Aphrodite, are comparatively unimportant myths; but the bird power is soon made entirely human by the Greeks in their flying angel of victory (partially human, with modified meaning of evil, in the Harpy and Siren); and thenceforward it associates itself with the Hebrew cherubim, and has had the most singular influence on the Christian religion by giving it wings to render the conception of angels mysterious and untenable, and check rational endeavour to determine the nature of subordinate spiritual agency; while yet it has given to that agency a vague poetical influence of the highest value in its own imaginative way.

But with the early serpent-worship there was associated another, that of the groves, of which you will also find the evidence exhaustively collected in Mr. Fergusson's work. This tree-

worship may have taken a dark form when associated with the Draconian one; or opposed, as in Judea, to a purer faith; but in itself, I believe, it was always healthy, and though it retains little definite hieroglyphic power in subsequent religion, it becomes, instead of symbolic, real; the flowers and trees are themselves beheld and beloved with a half-worshipping delight, which is always noble and healthful.

JOHN RUSKIN.

## ST. PETER'S

**I**T seems natural to begin what one has to say of Rome with something about St. Peter's; for the saint sits at the gate here as well as in Paradise.

It is very common for people to say that they are disappointed in the first sight of St. Peter's; and one hears much the same about Niagara. I cannot help thinking that the fault is in themselves; and that if the church and the cataract were in the habit of giving away their thoughts with that rash generosity which characterizes tourists, they might perhaps say of their visitors, "Well, if *you* are those Men of whom we have heard so much, we are a little disappointed, to tell the truth!" The refined tourist expects somewhat too much when he takes it for granted that St. Peter's will at once decorate him with the order of imagination, just as Victoria knights an alderman when he presents an address. Or perhaps he has been getting up a little architecture on the road from Florence, and is discomfited because he does not know whether he *ought* to be pleased or not, which is very much as if he should wait to be told whether it was fresh water or salt which makes the exhaustless grace of Niagara's

emerald curve, before he benignly consented to approve. It would be wiser, perhaps, for him to consider whether, if Michael Angelo had had the building of *him*, his own personal style would not have been more impressive.

It is not to be doubted that minds are of as many different orders as cathedrals, and that the Gothic imagination is vexed and discommoded in the vain endeavour to flatten its pinnacles, and fit itself into the round Roman arches. But if it be impossible for a man to like everything, it is quite possible for him to avoid being driven mad by what does not please him; nay, it is the imperative duty of a wise man to find out what that secret is which makes a thing pleasing to another. In approaching St. Peter's, one must take his Protestant shoes off his feet, and leave them behind him, in the Piazza Rusticucci. Otherwise the great Basilica, with those outstretching colonnades of Bramante, will seem to be a bloated spider lying in wait for him, the poor heretic fly. As he lifts the heavy leathern flapper over the door, and is discharged into the interior by its impetuous recoil, let him disburthen his mind altogether of stone and mortar, and think only that he is standing before the throne of a dynasty which, even in its decay, is the most powerful the world ever saw. Mason-work is all very well in itself, but it has nothing to do with the affair at present in hand.

Suppose that a man in pouring down a glass of claret could drink the South of France, that he could so disintegrate the wine by the force of imagination as to taste in it all the clustered beauty and bloom of the grape, all the dance and song and sunburnt jollity of the vintage. Or suppose that in eating bread he could transubstantiate it with the tender blade of spring, the gleam-flitted corn-ocean of summer, the royal autumn, with its golden beard, and the merry funerals of harvest. This is what the great poets do for us, we cannot tell how, with their fatally-chosen words, crowding the happy veins of language again with all the life and meaning and music that had been dribbling away from them since Adam. And this is what the Roman Church does for religion, feeding the soul not with the essential religious sentiment, not with a drop or two of the tincture of worship, but making us feel one by one all those original elements of which worship is composed; not bringing the end to us, but making us pass over and feel beneath our feet all the golden rounds of the ladder by which the climbing generations have reached that end; not handing us dryly a dead and extinguished Q. E. D., but letting it rather declare itself by the glory with which it interfuses the incense-clouds of wonder and aspiration and beauty in which it is veiled. The secret of her power is typified in the mystery of the Real Presence. She is the only

church that has been loyal to the heart and soul of man, that has clung to her faith in the imagination, and that would not give over her symbols and images and sacred vessels to the perilous keeping of the iconoclast Understanding. She has never lost sight of the truth, that the product human nature is composed of the sum of flesh and spirit, and has accordingly regarded both this world and the next as the constituents of that other world which we possess by faith. She knows that poor Panza, the body, has his kitchen longings and visions, as well as Quixote, the soul, his ethereal, and has wit enough to supply him with the visible, tangible raw material of imagination. She is the only poet among the churches, and, while Protestantism is unrolling a pocket surveyor's-plan, takes her votary to the pinnacle of her temple, and shows him meadow, upland, and tillage, cloudy heaps of forest clasped with the river's jewelled arm, hillsides white with the perpetual snow of flocks, and, beyond all, the interminable heave of the unknown ocean. Her empire may be traced upon the map by the boundaries of races; the understanding is her great foe; and it is the people whose vocabulary was incomplete till they had invented the archword Humbug that defies her. With that leaden bullet John Bull can bring down Sentiment when she flies her highest. And the more the pity for John Bull. One of these

days some one whose eyes are sharp enough will read in the *Times* a standing advertisement, "Lost, strayed, or stolen from the farmyard of the subscriber the valuable horse Pegasus. Probably has on him part of a new plough-harness, as that is also missing. A suitable reward, *etc.* J. Bull."

Protestantism reverses the poetical process I have spoken of above, and gives not even the bread of life, but instead of it the alcohol, or distilled intellectual result. This was very well so long as Protestantism continued to protest; for enthusiasm sublimates the understanding into imagination. But now that she also has become an establishment, she begins to perceive that she made a blunder in trusting herself to the intellect alone. She is beginning to feel her way back again, as one notices in Puseyism, and other such hints. One is put upon reflection when one sees burly Englishmen, who dine on beef and porter every day, marching proudly through St. Peter's on Palm Sunday, with those frightfully artificial palm-branches in their hands. Romanism wisely provides for the childish in men.

Therefore I say again, that one must lay aside his Protestantism in order to have a true feeling of St. Peter's. Here in Rome is the laboratory of that mysterious enchantress, who has known so well how to adapt herself to all the wants, or, if you will, the weaknesses of human nature,

making the retirement of the convent-cell a merit to the solitary, the scourge or the fast a piety to the ascetic, the enjoyment of pomp and music and incense a religious act in the sensual, and furnishing for the very soul itself a *confidante* in that ear of the dumb confessional, where it may securely disburthen itself of its sins and sorrows. And the dome of St. Peter's is the magic circle within which she works her most potent incantations. I confess that I could not enter it alone without a kind of awe.

But, setting entirely aside the effects of this church upon the imagination, it is wonderful, if one consider it only materially. Michael Angelo created a new world in which everything was colossal, and it might seem that he built this as a fit temple for those gigantic figures with which he peopled it to worship in. Here his Moses should be high-priest, the service should be chanted by his prophets and sibyls, and those great pagans should be brought hither from San Lorenzo in Florence, to receive baptism.

However unsatisfactory in other matters, statistics are of service here. I have seen a refined tourist who entered, Murray in hand, sternly resolved to have St. Peter's look small, brought to terms at once by being told that the canopy over the high altar (looking very like a four-post bedstead) was ninety-eight feet high. If he still obstinates himself, he is finished by being made to

measure one of the marble *putti*,\* which look like rather stoutish babies, and are found to be six feet, every sculptor's son of them. This ceremony is the more interesting, as it enables him to satisfy the guide of his proficiency in the Italian tongue by calling them *putty* at every convenient opportunity. Otherwise both he and his assistant terrify each other into mutual unintelligibility with that *lingua franca* of the English-speaking traveller, which is supposed to bear some remote affinity to the French language, of which both parties are as ignorant as an American Ambassador.

Murray gives all these little statistical nudges to the Anglo-Saxon imagination; but he knows that its finest nerves are in the pocket, and accordingly ends by telling you how much the church cost. I forget how much it is; but it cannot be more, I fancy, than the English national debt multiplied into itself three hundred and sixty-five times. If the pilgrim, honestly anxious for a sensation, will work out this little sum, he will be sure to receive all that enlargement of the imaginative faculty which arithmetic can give him. Perhaps the most dilating fact, after all, is that this architectural world has also a separate atmosphere, distinct from that of Rome by some ten degrees, and unvarying through the year.

\* Boys.

I think that, on the whole, Jonathan gets ready to be pleased with St. Peter's sooner than Bull. Accustomed to our lath and plaster expedients for churches, the portable sentry-boxes of Zion, mere solidity and permanence are pleasurable in themselves; and if he get grandeur also, he has Gospel measure. Besides, it is easy for Jonathan to travel. He is one drop of a fluid mass, who knows where his home is to-day, but can make no guess of where it may be to-morrow. Even in a form of government he only takes lodgings for the night, and is ready to pay his bill and be off in the morning. He should take his motto from Bishop Golias's "*Mihi est propositum in tabernâ mori*," \* though not in the sufistic sense of that misunderstood Churchman. But Bull can seldom be said to travel at all, since the first step of a true traveller is out of himself. He plays cricket and hunts foxes on the Campagna, makes entries in his betting-book while the Pope is giving his benediction, and points out Lord Calico to you awfully during the Sistine *Miserere*. If he let his beard grow, it always has a startled air, as if it suddenly remembered its treason to Sheffield, and only makes him look more English than ever. A masquerade is impossible to him, and his fancy balls are the solemnest facts in the world. Accordingly, he enters St. Peter's with the dome of St. Paul's drawn

\* I intend to die in a tavern.

tight over his eyes, like a criminal's cap, and ready for instant execution rather than confess that the English Wren had not a stronger wing than the Italian Angel. I like this in Bull, and it renders him the pleasantest of travelling-companions; for he makes you take England along with you, and thus you have two countries at once. And one must not forget in an Italian inn that it is to Bull he owes the clean napkins and sheets, and the privilege of his morning bath. Nor should Bull himself fail to remember that he ate with his fingers till the Italian gave him a fork.

Browning has given the best picture of St. Peter's on a festival-day, sketching it with a few verses in his large style. And doubtless it is the scene of the grandest spectacles which the world can see in these latter days. Those Easter pomps, where the antique world marches visibly before you in gilded mail and crimson doublet, refresh the eyes, and are good so long as they continue to be merely spectacle. But if one think for a moment of the servant of the servants of the Lord in cloth of gold, borne on men's shoulders, or of the children receiving the blessing of their Holy Father, with a regiment of French soldiers to protect the father from the children, it becomes a little sad. If one would feel the full meaning of those ceremonials, however, let him consider the coincidences between the Romish and the Budd-

hist forms of worship, and remembering that the Pope is the direct heir, through the Pontifex Maximus, of rites that were ancient when the Etruscans were modern, he will look with a feeling deeper than curiosity upon forms which record the earliest conquests of the Invisible, the first triumphs of mind over muscle.

To me the noon silence and solitude of St. Peter's were most impressive, when the sunlight, made visible by the mist of the ever-burning lamps in which it was entangled, hovered under the dome like the holy dove goldenly descending. Very grand also is the twilight, when all outlines melt into mysterious vastness, and the arches expand and lose themselves in the deepening shadow. Then, standing in the desert transept, you hear the far-off vespers swell and die like low breathings of the sea on some conjectured shore.

As the sky is supposed to scatter its golden star-pollen once every year in meteoric showers, so the dome of St. Peter's has its annual efflorescence of fire. This illumination is the great show of Papal Rome. Just after sunset, I stood upon the Trinità dei Monti and saw the little drops of pale light creeping downward from the cross and trickling over the dome. Then, as the sky darkened behind, it seemed as if the setting sun had lodged upon the horizon and there burned out, the fire still clinging to his massy ribs. And

when the change from the silver to the golden illumination came, it was as if the breeze had fanned the embers into flame again.

Bitten with the Anglo-Saxon gadfly that drives us all to disenchant artifice, and see the springs that fix it on, I walked down to get a nearer look. My next glimpse was from the bridge of Sant' Angelo; but there was no time nor space for pause. Foot-passengers crowding hither and thither, as they heard the shout of *Avanti!* from the mile of coachmen behind, dragoon-horses curtsying backward just where there were most women and children to be flattened, and the dome drawing all eyes and thoughts the wrong way, made a hubbub to be got out of at any desperate hazard. Besides, one could not help feeling nervously hurried; for it seemed quite plain to everybody that this starry apparition must be as momentary as it was wonderful, and that we should find it vanished when we reached the piazza. But suddenly you stand in front of it, and see the soft travertine of the front suffused with a tremulous, glooming glow, a mildened glory, as if the building breathed, and so transmuted its shadow into soft pulses of light.

After wondering long enough, I went back to the Pincio, and watched it for an hour longer. But I did not wish to see it go out. It seemed better to go home and leave it still trembling, so that I could fancy a kind of permanence in it,

and half believe I should find it there again some lucky evening. Before leaving it altogether, I went away to cool my eyes with darkness, and came back several times; and every time it was a new miracle, the more so that it was a human piece of faery-work. Beautiful as fire is in itself, I suspect that part of the pleasure is metaphysical, and that the sense of playing with an element which can be so terrible adds to the zest of the spectacle. And then fire is not the least degraded by it, because it is not utilized. If beauty were in use, the factory would add a grace to the river, and we should turn from the fire-writing on the wall of heaven to look at a message printed by the magnetic telegraph. There may be a beauty in the use itself; but utilization is always downward, and it is this feeling that makes Schiller's Pegasus in yoke so universally pleasing. So long as the curse of work clings to man, he will see beauty only in play. The capital of the most frugal commonwealth in the world burns up five thousand dollars a year in gunpowder, and nobody murmurs. Provident Judas wished to utilize the ointment, but the Teacher would rather that it should be wasted in poem.

The best lesson in æsthetics I ever got (and, like most good lessons, it fell from the lips of no regular professor) was from an Irishman on the day the Nymph Cochituate was formally introduced to the people of Boston. I made one

with other rustics in the streets, admiring the dignitaries in coaches with as much Christian charity as is consistent with an elbow in the pit of one's stomach and a heel on that toe which is your only inheritance from two excellent grandfathers. Among other allegorical phenomena, there came along what I should have called a hay-cart, if I had not known it was a triumphal car, filled with that fairest variety of mortal grass which with us is apt to spindle so soon into a somewhat sapless womanhood. Thirty-odd young maidens in white gowns, with blue sashes and pink wreaths of French crape, represented the United States. (How shall we limit our number, by the way, if ever Utah be admitted?) The ship, the printing-press, even the wondrous train of express-wagons, and other solid bits of civic fantasy, had left my Hibernian neighbour unmoved. But this brought him down. Turning to me, as the most appreciative public for the moment, with face of as much delight as if his head had been broken, he cried, "Now this is *raly* beautiful! Tothally regyardless uv expinse!" Methought my shirt-sleeved lecturer on the Beautiful had hit at least one nail full on the head. Voltaire but epigrammatized the same thought when he said, *Le superflu, chose très-nécessaire*.

As for the ceremonies of the Church, one need not waste time in seeing many of them. There is

a dreary sameness in them, and one can take an hour here and an hour there, as it pleases him, just as sure of finding the same pattern as he would be in the first or last yard of a roll of printed cotton. For myself, I do not like to go and look with mere curiosity at what is sacred and solemn to others. To how many these Roman shows are sacred, I cannot guess; but certainly the Romans do not value them much. I walked out to the grotto of Egeria on Easter Sunday, that I might not be tempted down to St. Peter's to see the mockery of Pio Nono's benediction. It is certainly Christian, for he blesses them that curse him, and does all the good which the waving of his fingers can do to people who would use him despitefully if they had the chance. I told an Italian servant she might have the day; but she said she did not care for it.

"But," urged I, "will you not go to receive the blessing of the Holy Father?"

"No, sir."

"Do you not wish it?"

"Not in the least; *his* blessing would do me no good. If I get the blessing of Heaven it will serve my turn."

There were three families of foreigners in our house, and I believe none of the Italian servants went to St. Peter's that day. Yet they commonly speak kindly of Pius. I have heard the same phrase from several Italians of the working-

class. "He is a good man," they said, "but ill-led."

What one sees in the streets of Rome is worth more than what one sees in the churches. The churches themselves are generally ugly. St. Peter's has crushed all the life out of architectural genius, and all the modern churches look as if they were swelling themselves in imitation of the great Basilica. There is a clumsy magnificence about them, and their heaviness oppresses. Their marble incrustations look like a kind of architectural elephantiasis, and the parts are puffy with a dropsical want of proportion. There is none of the spring and soar which one may see even in the Lombard churches, and a Roman column standing near one of them, slim and gentlemanlike, satirizes silently their tawdry *parvenuism*. Attempts at mere bigness are ridiculous in a city where the Colosseum still yawns in crater-like ruin, and where Michael Angelo made a noble church out of a single room in Diocletian's baths.

Shall I confess it? Michael Angelo seems to me, in his angry reaction against sentimental beauty, to have mistaken bulk and brawn for the antithesis of feebleness. He is the apostle of the exaggerated, the Victor Hugo of painting and sculpture. I have a feeling that rivalry was a more powerful motive with him than love of art, that he had the conscious intention to be original, which seldom leads to anything better than being extravagant. The show of muscle

proves strength, not power; and force for mere force's sake in art makes one think of Milo caught in his own log. This is my second thought, and strikes me as perhaps somewhat niggardly toward one in whom you cannot help feeling there was so vast a possibility. And then his Eve, his David, his Sibyls, his Prophets, his Sonnets! Well, I take it all back, and come round to St. Peter's again just to hint that I doubt about domes. In Rome they are so much the fashion that I felt as if they were the *goiter* of architecture. Generally they look heavy. Those on St. Mark's in Venice are the only light ones I ever saw, and they look almost airy, like tents puffed out with wind. I suppose one must be satisfied with the interior effect, which is certainly noble in St. Peter's. But for impressiveness both within and without there is nothing like a Gothic cathedral for me, nothing that crowns a city so nobly, or makes such an island of twilight silence in the midst of its noonday clamours.

JAMES RUSSELL LOWELL.

## ANGLERS

AND for you that have heard many grave, serious men pity Anglers; let me tell you, Sir, there be many men that are by others taken to be serious and grave men, which we contemn and pity. Men that are taken to be grave, because Nature hath made them of a sour complexion; money-getting-men, men that spend all their time, first in getting, and next, in anxious care to keep it; men that are condemned to be rich, and then always busy or discontented: for these poor-rich-men, we Anglers pity them perfectly, and stand in no need to borrow their thoughts to think ourselves so happy. No, no, Sir, we enjoy a contentedness above the reach of such dispositions, and as the learned and ingenous Montaigne says, like himself, freely, "When my Cat and I entertain each other with mutual apish tricks, as playing with a garter, who knows but that I make my Cat more sport than she makes me? Shall I conclude her to be simple, that has her time to begin or refuse to play as freely as I myself have? Nay, who knows but that it is a defect of my not understanding her language, for doubtless Cats talk and reason with one another, that we

agree no better: and who knows but that she pities me for being no wiser than to play with her, and laughs and censures my folly, for making sport for her, when we two play together?"

Thus freely speaks Montaigne concerning Cats; and I hope I may take as great a liberty to blame any man, and laugh at him too, let him be never so grave, that hath not heard what Anglers can say in the justification of their Art and Recreation; which I may again tell you is so full of pleasure, that we need not borrow their thoughts, to think ourselves happy.

I confess my discourse is like to prove suitable to my recreation, calm and quiet; we seldom take the name of God into our mouths, but it is either to praise him, or pray to him: if others use it vainly in the midst of their recreations, so vainly as if they meant to conjure, I must tell you, it is neither our fault nor our custom; we protest against it. But, pray remember, I accuse nobody; for as I would not make a watery discourse, so I would not put too much vinegar into it; nor would I raise the reputation of my own art, by the diminution or ruin of another's. And so much for the prologue to what I mean to say.

And now for the Water, the element that I trade in. The water is the eldest daughter of the creation, the element upon which the Spirit of God did first move, the element which God com-

manded to bring forth living creatures abundantly; and without which, those that inhabit the land, even all creatures that have breath in their nostrils, must suddenly return to putrefaction. Moses, the great law-giver and chief philosopher, skilled in all the learning of the Egyptians, who was called the friend of God, and knew the mind of the Almighty, names this element the first in the creation: this is the element upon which the Spirit of God did first move, and is the chief ingredient in the creation: many philosophers have made it to comprehend all the other elements, and most allow it the chiefest in the mixture of all living creatures.

There be that profess to believe that all bodies are made of water, and may be reduced back again to water only: they endeavour to demonstrate it thus,

Take a willow, or any like speedy growing plant, newly rooted in a box or barrel full of earth, weigh them all together exactly when the tree begins to grow, and then weigh all together after the tree is increased from its first rooting, to weigh an hundred pound weight more than when it was first rooted and weighed; and you shall find this augment of the tree to be without the diminution of one dram weight of the earth. Hence they infer this increase of wood to be from water of rain, or from dew, and not to be from any other element. And they affirm, they

can reduce this wood back again to water; and they affirm also, the same may be done in any animal or vegetable. And this I take to be a fair testimony of the excellency of my element of water.

The water is more productive than the earth. Nay, the earth hath no fruitfulness without showers or dews; for all the herbs, and flowers, and fruit, are produced and thrive by the water; and the very minerals are fed by streams that run under ground, whose natural course carries them to the tops of many high mountains, as we see by several springs breaking forth on the tops of the highest hills; and this is also witnessed by the daily trial and testimony of several miners.

Nay, the increase of those creatures that are bred and fed in the water are not only more and more miraculous, but more advantageous to man, not only for the lengthening of his life, but for the preventing of sickness; for 'tis observed by the most learned physicians, that the casting off of Lent, and other fish-days, which hath not only given the lie to so many learned, pious, wise founders of colleges, for which we should be ashamed, hath doubtless been the chief cause of those many putrid, shaking, intermitting agues, unto which this nation of ours is now more subject than those wiser countries that feed on herbs, sallats, and plenty of fish; of which it is observed in story, that the greatest part of the world now

do. And it may be fit to remember that Moses (*Lev.* 11. 9, *Deut.* 14. 9) appointed fish to be the chief diet for the best commonwealth that ever yet was.

And it is observable, not only that there are fish, as namely the Whale, three times as big as the mighty Elephant, that is so fierce in battle, but that the mightiest feasts have been of fish. The Romans, in the height of their glory, have made fish the mistress of all their entertainments; they have had music to usher in their Sturgeons, Lampreys, and Mulletts, which they would purchase at rates rather to be wondered at than believed. He that shall view the writings of Macrobius or Varro, may be confirmed and informed of this, and of the incredible value of their fish and fish-ponds.

But, Gentlemen, I have almost lost myself, which I confess I may easily do in this philosophical discourse; I met with most of it very lately (and I hope happily) in a conference with a most learned physician, Dr. Wharton, a dear friend, that loves both men and my art of Angling. But, however, I will wade no deeper in these mysterious arguments, but pass to such observations as I can manage with more pleasure, and less fear of running into error. But I must not yet forsake the waters, by whose help we have so many known advantages.

And first, to pass by the miraculous cures of

our known baths, how advantageous is the sea for our daily traffic, without which we could not now subsist. How does it not only furnish us with food and physic for the bodies, but with such observations for the mind as ingenious persons would not want!

How ignorant had we been of the beauty of Florence, of the monuments, urns, and rarities that yet remain in and near unto old and new Rome, (so many as it is said will take up a year's time to view, and afford to each of them but a convenient consideration); and therefore it is not to be wondered at, that so learned and devout a father as St. Jerome, after his wish to have seen Christ in the flesh, and to have heard St. Paul preach, makes his third wish, to have seen Rome in her glory; and that glory is not yet all lost, for what pleasure is it to see the monuments of Livy, the choicest of the historians; of Tully, the best of orators; and to see the bay-trees that now grow out of the very tomb of Virgil! These, to any that love learning, must be pleasing. But what pleasure is it to a devout Christian, to see there the humble house in which St. Paul was content to dwell, and to view the many rich statues that are there made in honour of his memory! nay, to see the very place in which St. Peter and he lie buried together! These are in and near to Rome. And how much more doth it please the pious curiosity of a Christian, to see

that place, on which the blessed Saviour of the world was pleased to humble himself, and to take our nature upon him, and to converse with men: to see Mount Sion, Jerusalem, and the very sepulchre of our Lord Jesus! How may it beget and heighten the zeal of a Christian, to see the devotions that are daily paid to him at that place! Gentlemen, lest I forget myself, I will stop here, and remember you, that but for my element of water, the inhabitants of this poor island must remain ignorant that such things ever were, or that any of them have yet a being.

Gentlemen, I might both enlarge and lose myself in such like arguments. I might tell you that Almighty God is said to have spoken to a fish, but never to a beast; that he hath made a whale a ship to carry and set his prophet Jonah safe on the appointed shore. Of these I might speak, but I must in manners break off, for I see Theobald's House. I cry your mercy for being so long, and thank you for your patience.

For the antiquity of Angling, of which I shall not say much, but only this; some say it is as ancient as Deucalion's flood: others that Belus, who was the first inventor of godly and virtuous recreations, was the first inventor of Angling: and some others say, for former times have had their disquisitions about the antiquity of it, that Seth, one of the sons of Adam, taught it to his sons, and that by them it was derived to poster-

ity: others say, that he left it engraven on those pillars which he erected, and trusted to preserve the knowledge of the mathematics, music, and the rest of that precious knowledge, and those useful arts, which by God's appointment or allowance, and his noble industry, were thereby preserved from perishing in Noah's flood.

These, Sir, have been the opinions of several men, that have possibly endeavoured to make angling more ancient than is needful, or may well be warranted; but for my part, I shall content myself in telling you, that angling is much more ancient than the Incarnation of our Saviour; for in the Prophet Amos mention is made of fish-hooks; and in the Book of Job, which was long before the days of Amos, for that book is said to be writ by Moses, mention is made also of fish-hooks, which must imply anglers in those times.

But, my worthy friend, as I would rather prove myself a gentleman, by being learned and humble, valiant and inoffensive, virtuous and communicable, than by any fond ostentation of riches, or, wanting those virtues myself, boast that these were in my ancestors (and yet I grant, that where a noble and ancient descent and such merits meet in any man, it is a double dignification of that person:) So if this antiquity of angling, (which for my part I have not forced,) shall, like an ancient family, be either an honour or an orna-

ment to this virtuous art which I profess to love and practise, I shall be the gladder that I made an accidental mention of the antiquity of it; of which I shall say no more, but proceed to that just commendation which I think it deserves.

And for that, I shall tell you, that in ancient times a debate hath risen (and it remains yet unresolved), whether the happiness of man in this world doth consist more in contemplation or action?

Concerning which, some have endeavoured to maintain their opinion of the first; by saying, That the nearer we mortals come to God by way of imitation, the more happy we are. And they say, That God enjoys Himself only, by a contemplation of his own infiniteness, eternity, power, and goodness, and the like. And upon this ground, many cloisteral men of great learning, and devotion, prefer contemplation before action. And many of the fathers seem to approve this opinion, as may appear in their commentaries upon the words of our Saviour to Martha, *Luke* 10. 41, 42.

And on the contrary, there want not men of equal authority and credit, that prefer action to be the more excellent; as namely, experiments in physic, and the application of it, both for the ease and prolongation of man's life; by which each man is enabled to act and do good to others; either to serve his country, or do good to particular persons; and they say also, That action is

doctrinal, and teaches both art and virtue, and is a maintainer of human society; and for these, and other like reasons, to be preferred before contemplation.

Concerning which two opinions I shall forbear to add a third, by declaring my own; and rest myself contented in telling you, my very worthy friend, that both these meet together, and do most properly belong to the most honest, ingenuous, quiet, and harmless art of angling.

And first, I shall tell you what some have observed, and I have found it to be a real truth, that the very sitting by the river's side is not only the quietest and fittest place for contemplation, but will invite an angler to it: and this seems to be maintained by the learned Pet. du Moulin, who, in his discourse of the fulfilling of Prophecies, observes, that when God intended to reveal any future events or high notions to his prophets, he then carried them either to the deserts, or the sea-shore, that having so separated them from amidst the press of people and business, and the cares of the world, he might settle their mind in a quiet repose, and there make them fit for revelation.

And this seems also to be intimated by the children of Israel (*Psal.* 137), who have in a sad condition banished all mirth and music from their pensive hearts, and having hung up their then mute harps upon the willow-trees growing

by the rivers of Babylon. sat down upon those banks, bemoaning the ruins of Sion, and contemplating their own sad condition.

And an ingenuous Spaniard says, That rivers and the inhabitants of the watery element were made for wise men to contemplate, and fools to pass by without consideration. And though I will not rank myself in the number of the first, yet give me leave to free myself from the last, by offering to you a short contemplation, first of rivers, and then of fish; concerning which I doubt not but to give you many observations that will appear very considerable: I am sure they have appeared so to me, and made many an hour pass away more pleasantly, as I have sat quietly on a flowery bank by a calm river, and contemplated what I shall now relate to you.

And first concerning rivers; there be so many wonders reported and written of them, and of the several creatures that be bred and live in them, and those by authors of so good credit, that we need not to deny them an historical faith.

As namely of a river in Epirus that puts out any lighted torch, and kindles any torch that was not lighted. Some waters being drank, cause madness, some drunkenness, and some laughter to death. The river Selarus in a few hours turns a rod or wand to stone: and our Camden mentions the like in England, and the like in Lochmere in Ireland. There is also a river in Arabia,

of which all the sheep that drink thereof have their wool turned into a vermillion colour. And one of no less credit than Aristotle, tells us of a merry river, the river Elusina, that dances at the noise of music, for with music it bubbles, dances, and grows sandy, and so continues till the music ceases, but then it presently returns to its wonted calmness and clearness. And Camden tells us of a well near to Kirby in Westmoreland, that ebbs and flows several times every day: and he tells us of a river in Surrey (it is called Mole), that after it has run several miles, being opposed by hills, finds or makes itself a way under ground, and breaks out again so far off, that the inhabitants thereabout boast, as the Spaniards do of their river Anus, that they feed divers flocks of sheeps upon a bridge. And lastly, for I would not tire your patience, one of no less authority than Josephus, that learned Jew, tells us of a river in Judea that runs swiftly all the six days of the week, and stands still and rests all their Sabbath.

But I will lay aside my discourse of rivers, and tell you some things of the monsters, or fish, call them what you will, that they breed and feed in them. Pliny the philosopher says (in the third chapter of his ninth book), that in the Indian Sea, the fish called the Balaena or Whirlpool, is so long and broad, as to take up more in length and breadth than two acres of ground; and, of

other fish of two hundred cubits long; and that in the river Ganges, there be Eels of thirty feet long. He says there, that these monsters appear in that sea only, when the tempestuous winds oppose the torrents of waters falling from the rocks into it, and so turning what lay at the bottom to be seen on the water's top. And he says, that the people of Cadara, an island near this place, make the timber for their houses of those fish-bones. He there tells us, that there are sometimes a thousand of these great Eels found wrapt, or interwoven together. He tells us there, that it appears that dolphins love music, and will come, when called for, by some men or boys, that know and use to feed them; and that they can swim as swift as an arrow can be shot out a bow; and much of this is spoken concerning the dolphin, and other fish, as may be found also in learned Dr. Casaubon's *Discourse of Credulity and Incredulity*, printed by him about the year 1670.

I know, we Islanders are averse to the belief of these wonders; but there be so many strange creatures to be now seen, many collected by John TreDESCANT, and others added by my friend Elias Ashmole, Esq., who now keeps them carefully and methodically at his house near to Lambeth, near London, as may get some belief of some of the other wonders I mentioned. I will tell you some of the wonders that you may now see, and not till then believe, unless you think fit.

You may there see the Hog-fish, the Dog-fish, the Dolphin, the Cony-fish, the Parrot-fish, the Shark, the Poison-fish, Sword-fish, and not only other incredible fish, but you may there see the Salamander, several sorts of Barnacles, of Solan Geese, the Bird of Paradise, such sorts of Snakes, and such Bird's-nests, and of so various forms, and so wonderfully made, as may beget wonder and amusement in any beholder: and so many hundred of other rarities in that collection, as will make the other wonders I spake of, the less incredible; for, you may note, that the waters are Nature's store-house, in which she locks up her wonders.

IZAACK WALTON.

## BROEK:

### THE DUTCH PARADISE

**I**T has long been a matter of discussion and controversy among the pious and the learned, as to the situation of the terrestrial paradise whence our first parents were exiled. This question has been put to rest by certain of the faithful in Holland, who have decided in favour of the village of BROEK, about six miles from Amsterdam. It may not, they observe, correspond in all respects to the description of the garden of Eden, handed down from days of yore, but it comes nearer to their ideas of a perfect paradise than any other place on earth.

This eulogium induced me to make some inquiries as to this favoured spot, in the course of a sojourn at the city of Amsterdam; and the information I procured fully justified the enthusiastic praises I had heard. The village of Broek is situated in Waterland, in the midst of the greenest and richest pastures of Holland, I may say, of Europe. These pastures are the source of its wealth; for it is famous for its dairies, and for those oval cheeses which regale

and perfume the whole civilized world. The population consists of about six hundred persons, comprising several families which have inhabited the place since time immemorial, and have waxed rich on the products of their meadows. They keep all their wealth among themselves, intermarrying, and keeping all strangers at a wary distance. They are a "hard money" people, and remarkable for turning the penny the right way. It is said to have been an old rule, established by one of the primitive financiers and legislators of Broek, that no one should leave the village with more than six guilders in his pocket, or return with less than ten; a shrewd regulation, well worthy the attention of modern political economists, who are so anxious to fix the balance of trade.

What, however, renders Broek so perfect an elysium in the eyes of all true Hollanders is the matchless height to which the spirit of cleanliness is carried there. It amounts almost to a religion among the inhabitants, who pass the greater part of their time rubbing and scrubbing, and painting and varnishing; each housewife vies with her neighbour in her devotion to the scrubbing-brush, as zealous Catholics do in their devotion to the cross; and it is said, a notable housewife of the place in days of yore is held in pious remembrance, and almost canonized as a saint, for having died of pure exhaustion and

chagrin, in an ineffectual attempt to scour a black man white.

These particulars awakened my ardent curiosity to see a place which I pictured to myself the very fountain-head of certain hereditary habits and customs prevalent among the descendants of the original Dutch settlers of my native State. I accordingly lost no time in performing a pilgrimage to Broek.

Before I reached the place, I beheld symptoms of the tranquil character of its inhabitants. A little clump-built boat was in full sail along the lazy bosom of a canal, but its sail consisted of the blades of two paddles stood on end, while the navigator sat steering with a third paddle in the stern, crouched down like a toad, with a slouched hat drawn over his eyes. I presumed him to be some nautical lover, on the way to his mistress. After proceeding a little farther, I came in sight of the harbour or port of destination of this drowsy navigator. This was the Broeken-Meer, an artificial basin, or sheet of olive-green water, tranquil as a mill-pond. On this the village of Broek is situated, and the borders are laboriously decorated with flower-beds, box-trees clipped into all kinds of ingenious shapes and fancies, and little "*lust*" houses or pavilions.

I alighted outside of the village, for no horse nor vehicle is permitted to enter its precincts, lest it should cause defilement of the well-scoured

pavements. Shaking the dust off my feet, therefore, I prepared to enter, with due reverence and circumspection, this *sanctum sanctorum* of Dutch cleanliness. I entered by a narrow street, paved with yellow bricks, laid edgewise, and so clean that one might eat from them. Indeed, they were actually worn deep, not by the tread of feet, but by the friction of the scrubbing-brush.

The houses were built of wood, and all appeared to have been freshly painted, of green, yellow, and other bright colours. They were separated from each other by gardens and orchards, and stood at some little distance from the street, with wide areas of court-yards, paved in mosaic, with variegated stones, polished by frequent rubbing. The areas were divided from the street by curiously wrought railings, or balustrades, of iron, surmounted with brass and copper balls, scoured into dazzling effulgence. The very trunks of the trees in front of the houses were by the same process made to look as if they had been varnished. The porches, doors, and window-frames of the houses were of exotic woods, curiously carved, and polished like costly furniture. The front doors are never opened, except on christenings, marriages, or funerals; on all ordinary occasions, visitors enter by the back-door. In former times, persons when admitted had to put on slippers, but this oriental ceremony is no longer insisted upon.

A poor-devil Frenchman, who attended upon me as cicerone, boasted with some degree of exultation of a triumph of his countrymen over the stern regulations of the place. During the time that Holland was overrun by the armies of the French republic, a French general, surrounded by his whole *état major*, who had come from Amsterdam to view the wonders of Broek, applied for admission at one of these tabooed portals. The reply was, that the owner never received anyone who did not come introduced by some friend. "Very well," said the general, "take my compliments to your master, and tell him I will return here to-morrow with a company of soldiers, *pour parler raison avec on ami Hollandais*." Terrified at the idea of having a company of soldiers billeted upon him, the owner threw open his house, entertained the general and his retinue with unwonted hospitality, though it is said it cost the family a month's scrubbing and scouring to restore all things to exact order after this military invasion. My vagabond informant seemed to consider this one of the greatest victories of the republic.

I walked about the place in mute wonder and admiration. A dead stillness prevailed around, like that in the deserted streets of Pompeii. No sign of life was to be seen, excepting now and then a hand, and a long pipe, and an occasional puff of smoke, out of the window of some "*lust-*

*haus*" overhanging a miniature canal; and on approaching a little nearer, the periphery in profile of some robustious burgher.

Among the grand houses pointed out to me were those of Claes Bakker and Cornelius Bakker, richly carved and gilded, with flower-gardens and clipped shrubberies; and that of the Great Ditus, who, my poor-devil cicerone informed me in a whisper, was worth two millions; all these were mansions shut up from the world, and only kept to be cleaned. After having been conducted from one wonder to another of the village, I was ushered by my guide into the grounds and gardens of Mynheer Broekker, another mighty cheese-manufacturer, worth eighty thousand guilders a year. I had repeatedly been struck with the similarity of all that I had seen in this amphibious little village to the buildings and landscapes on Chinese platters and teapots; but here I found the similarity complete, for I was told that these gardens were modelled upon Van Bramm's description of those of Yuen min Yuen, in China. Here were serpentine walks, with trellised borders; winding canals, with fanciful Chinese bridges; flower-beds resembling huge baskets, with the flower of "love lies bleeding" falling over to the ground. But mostly had the fancy of Mynheer Broekker been displayed about a stagnant little lake, on which a corpulent-like pinnace lay at anchor. On the border was a cottage, within

which were a wooden man and woman seated at table, and a wooden dog beneath, all the size of life; on pressing a spring, the woman commenced spinning and the dog barked furiously. On the lake were wooden swans, painted to the life; some floating, others on the nest among the rushes; while a wooden sportsman, crouched among the bushes, was preparing his gun to take deadly aim. In another part of the garden was a dominie in his clerical robes, with wig, pipe, and cocked hat; and mandarins with nodding heads, amid red lions, green tigers, and blue hares. Last of all, the heathen deities, in wood and plaster, male and female, naked and barefaced as usual, and seeming to stare with wonder at finding themselves in such strange company.

My shabby French guide, while he pointed out all these mechanical marvels of the garden, was anxious to let me see that he had too polite a taste to be pleased by them. At every new nick-nack he would screw down his mouth, shrug up his shoulders, take a pinch of snuff, and exclaim: "*Ma foi, Monsieur, ces Hollandais sont forts pour ces bêtises-là!*"

To attempt to gain admission to any of these stately abodes was out of the question, having no company of soldiers to enforce a solicitation. I was fortunate enough, however, through the aid of my guide, to make my way into the kitchen of the illustrious Ditmus, and I question whether

the parlour would have proved more worthy of observation. The cook, a little wiry, hook-nosed woman, worn thin by incessant action and friction, was bustling about among her kettles and saucepans, with the scullion at her heels, both clattering in wooden shoes, which were as clean and white as the milk-pails; rows of vessels, of brass and copper, regiments of pewter dishes and portly porringers, gave resplendent evidence of the intensity of their cleanliness; the very trammels and hangers in the fireplace were highly scoured, and the burnished face of the good Saint Nicholas shone forth from the iron plate of the chimney-back.

Among the decorations of the kitchen was a printed sheet of wood-cuts, representing the various holiday customs of Holland, with explanatory rhymes. Here I was delighted to recognize the jollities of New Year's day, the festivities of Paäs and Pinkster, and all the other merry-makings handed down in my native place from the earliest times of New Amsterdam, and which has been such bright spots in the years of my childhood. I eagerly made myself master of this precious document for a trifling consideration, and bore it off as a memento of the place; though I question if, in so doing, I did not carry off with me the whole current literature of Broek.

I must not omit to mention that this village is the paradise of cows as well as men; indeed,

you would almost suppose the cow to be as much an object of worship here, as the bull was among the ancient Egyptians; and well does she merit it, for she is in fact the patroness of the place. The same scrupulous cleanliness, however, which pervades everything else, is manifested in the treatment of this venerated animal. She is not permitted to perambulate the place; but in winter, when she forsakes the rich pasture, a well-built house is provided for her, well painted, and maintained in the most perfect order. Her stall is of ample dimensions; the floor is scrubbed and polished; her hide is daily curried and brushed and sponged to her heart's content, and her tail is daintily tucked up to the ceiling, and decorated with a ribbon!

On my way back through the village, I passed the house of the *prediger* or preacher; a very comfortable mansion, which led me to augur well of the state of religion in the village. On inquiry, I was told that for a long time the inhabitants lived in a great state of indifference as to religious matters; it was in vain that their preachers endeavoured to arouse their thoughts as to a future state; the joys of heaven, as commonly depicted, were but little to their taste. At length a dominie appeared among them who struck out in a different vein. He depicted the New Jerusalem as a place all smooth and level, with beautiful dykes and ditches and canals, and houses all

shining with paint and varnish and glazed tiles, and where there should never come horse, nor ass, nor cat, nor dog, nor anything that could make noise or dirt; but there should be nothing but rubbing and scrubbing, and washing and painting, and gilding and varnishing, for ever and ever, amen! Since that time the good housewives of Broek have all turned their faces Zionward.

WASHINGTON IRVING.

## ON THE TURKEY

THE turkey is surely one of the prettiest presents which the Old World has received from the New.

Superlatively knowing persons maintain that the Romans were addicted to the turkey, that it was served at Charlemagne's wedding-feast, and that therefore it is false to praise the Jesuits for this most savoury of imports.

Let us silence such dealers in paradox with a two-fold refutation:

1. The French name of the bird, which, being *coq d'Inde*, clearly betrays its origin: for at first America was always known as the western Indies;

2. The appearance of the bird, which is clearly outlandish. A scholar could make no mistake about it.

Nevertheless, convinced already as I was, I have been at some pains to investigate the subject, and here are my conclusions:

1. That the turkey appeared in Europe towards the end of the seventeenth century;

2. That it was imported by the Jesuits, who bred it in large numbers, particularly on one of

their farms in the neighbourhood of Bourges;

3. That from there it gradually spread over the whole of France; and hence it was that in many dialects the word for turkey became and still is *jesuite*;

4. That America is the only place where the turkey has been found wild and in a state of nature (there are none in Africa);

5. That in North America, where it is very common, they rear it either from eggs found in the forest and hatched in captivity, or from young birds caught wild; so reared, it is nearer to its natural state, and retains its primitive plumage.

The case is proved to my complete satisfaction, and I here give thanks to the good Fathers for their enterprise in this matter as well as in another, namely, the importation of quinine, which is called in English, Jesuit's-bark.

I also discovered in the course of my researches that the acclimatization of the species in France was a gradual process. Enlightened students of the subject have assured me that in the middle of the last century, out of every twenty turkeys hatched, not more than ten were successfully brought to maturity; whereas to-day, other things being equal, the proportion has reached fifteen in twenty. Rain-storms are especially fatal to them. The heavy rain-drops, driven by the wind, beat upon their delicate and unprotected skulls, and they fall dead.

The turkey is the largest of our domestic fowls, and if not the most delicately flavoured, certainly the most savoury.

It has also the peculiar merit of attracting all classes of society.

When the ploughman and the vine-dresser make merry on long winter evenings, what do we see roasting before a brilliant fire in the kitchen, the humble kitchen which is also a dining-room? A turkey.

When the hard-worked artisan invites his friends to celebrate a rare and precious holiday, what dish will surely crown the feast? A turkey, stuffed with sausage-meat or Lyons chestnuts.

And in the high places of gastronomy, at those choice gatherings where politics give way to dissertations upon taste, what is the cause of fondest expectation, the chief lure of the second course? A truffled turkey! . . . And it is written in my secret memoirs that its potent juices have not seldom set features eminently diplomatic in a glow.

The importation of turkeys has been the cause of important accretions to the public purse, and gives rise to a considerable volume of trade.

By rearing turkeys, the farmer can more easily pay his rent, and his daughters save up enough for their doweries; for the lieges must be free

with their crowns if they would feast upon this foreign flesh.

The financial importance of the truffled turkey deserves special mention.

I have reason to believe that from the beginning of November to the end of February the daily consumption of truffled turkeys in Paris is three hundred, giving a total for the whole period of thirty-six thousand turkeys.

The ordinary price of turkey so prepared is at least 20 francs, which gives a total of 720,000 francs—no mean circulation of wealth. And to this must be added a like sum for chickens, pheasants, and partridges, also truffled, which are displayed every day in the shop windows, to the agony of those beholders who have not the wherewithal to attain.

During my sojourn in Hartford, in Connecticut, I had the good fortune to shoot a wild turkey. Such an exploit is worthy to be handed down to posterity, and I shall the more readily describe it, in that I am the hero of the tale.

A worthy old American farmer, who lived in the backwoods, had asked me to join him for a few days' shooting; he promised me partridges, grey squirrels, and wild turkeys, and invited me to bring a friend.

Accordingly, one fine day in October, 1794,

my friend, Mr. King and I hired two hacks and set out, in the hope of reaching Mr. Bulow's farm towards nightfall, the distance being five mortal leagues from Hartford, Conn.

Mr. King was an odd sort of sportsman; he was passionately fond of shooting; but always when he had killed his bird, he used to look upon himself as a murderer and give vent to elegies and moral reflections on the fate of the victim; after which he would repeat the performance.

Although the road was no more than an ill-defined track, we reached our destination without mishap, and were welcomed with that quiet but cordial hospitality which is expressed in deeds rather than words; that is to say, in a very few moments everything possible was done for the comfort of men, horses, and dogs, and in the most gracious manner.

We devoted two hours to an inspection of the farm and its dependencies; I could describe it all if I wished, but I prefer to introduce my readers to Mr. Bulow's four buxom daughters, for whom our arrival was a great event.

Their ages ranged from sixteen to twenty; they were fresh-complexioned and radiant with health, and there was a simplicity and unstudied grace about them which lent a thousand charms to all they did.

Shortly after our return from the tour of in-

spection, we sat down to a most generous meal. There was a superb piece of corned beef, a stewed goose, a magnificent leg of mutton, a variety of vegetables, and at either end of the table two vast jugs of cider, so excellent that I could have gone on drinking it for ever.

When we had proved to our host that we were sportsmen worthy of the name, at least in point of appetite, he turned to the object of our visit; he described, as best he could, the spots where we might expect to find game, the best landmarks to guide us on our way back, and the situation of the farm houses where we could obtain refreshment.

In the meantime, the young ladies had made ready some excellent tea, of which we drank more than a cupful; after which we were shown to a room with two beds and soon fell asleep under the influence of exercise and good cheer.

The following morning was far advanced before we set out, and once past Mr. Bulow's clearings, I found myself for the first time in virgin forest, where the sound of an ax had never been heard.

I went forward enraptured, observing the benefits and ravages of time, the creator and destroyer, and followed with keen pleasure the successive phases in the life of an oak, from the moment when it first emerges from the soil, a two-leafed sprig, to the time when nothing is

left but a long, dark stain, the very dust of its heart.

Soon, however, at the urgent request of Mr. King, I left off dreaming, and we set about our sport. Our first victims were some pretty little grey partridges, plump and tender as could be. Then we brought down in rapid succession six or seven grey squirrels, which are highly prized in those parts; and shortly afterwards our lucky star brought us into the middle of a flock of turkeys.

They flew off at short intervals one after another, making a great commotion, and screaming raucously. Mr. King fired first, and ran after his bird; the rest were all, as I thought, beyond gun-shot, when a straggler rose, not ten paces from the clearing in which I stood: I fired and he fell stone-dead.

None but sportsman can understand the exquisite satisfaction of that perfect shot. I took that glorious bird and turned him this way and that, feasting my eyes upon him, for a full quarter of an hour, at the end of which time I heard Mr. King calling for help; I ran in the direction of the cries, and found that he only wanted me to join him in the search for a turkey which he swore that he had shot, but which had nevertheless utterly disappeared.

I put my dog in, but he led us into a mass of

prickly undergrowth which would have held up a snake, and we were forced to abandon the search; whereupon my companion lost his temper and never recovered it until he reached home.

The remainder of our day's sport was not such as to be worth recording. Going home, we lost our way in those boundless woods, and were looking forward in some dismay to a night in the open, when we heard the silvery voice of our fair hostesses and the deep bass of their papa; they had most kindly come to meet us, and our difficulties were at an end.

The four sisters had put on full armour: best dresses, clean new sashes, pretty bonnets and dainty shoes were so many proofs of their desire to please; and for my part, when one of them came up to me and claimed my arm, for all the world as if she were my wife, I determined to do all that lay in my power to deserve the compliment.

When we reached the farm, supper was ready waiting for us; but before attacking it, we sat down for a short time in front of a blazing fire which had been lit for us, despite the mildness of the weather. Most comforting we found it, and our weariness was wafted away as if by magic.

This custom had no doubt been borrowed from the Indians who always keep a fire burning in their tents. Or perhaps it has come down to us

by tradition from St. Francis of Sales, who said that a fire was a good thing for twelve months in the year. (*Non liquet.*)

We ate like starving men; a generous bowl of punch appeared to crown a delightful evening, during which our host abandoned his earlier reserve and talk flowed free until long past midnight.

We spoke of the War of Independence, in which Mr. Bulow had served as an officer of some distinction; of M. de La Fayette, whose memory grows ever dearer to the hearts of all Americans, who never speak of him but by his title, as the marquis; of agriculture, at that time the great source prosperity in the United States; and lastly of our own dear France, then more than ever dear to me, who was exiled from her shores.

By way of interlude, Mr. Bulow would turn to his eldest daughter and say, "Maria, give us a song." And she never needed to be asked a second time, but with a charming air of embarrassment, sang the national air of Yankee Doodle, Queen Mary's Lament, and Major André's, all popular songs in that country. Maria had taken a few lessons, and those far-away parts passed for something of a virtuosa; but the chief merit in her singing lay in the quality of her voice, which was soft, unaffected, and very clear.

Next morning we took our leave, ignoring, as

in courtesy bound, the friendly insistence of our host. While the horses were being saddled, Mr. Bulow took me on one side and spoke the following remarkable words: "If there is a happy man under heaven, my dear sir, you see that man in me; everything around you, and that you have seen in my house, comes entirely from my own property. These stockings were knitted by my daughters; my animals provide me with shoes, clothing, and meat, and for the rest of my plain but ample fare I need not go beyond my garden and my farmyard; and, which, is greatly to the credit of our Government, Connecticut holds thousands of farmers as happily placed as I am, and whose doors, like mine, are never locked.

"The taxes are almost nothing, and so long as they are paid we can sleep in peace. Congress does all in its power to help our budding industry; agents traverse every acre of the land to purchase what we have to sell; and I have now enough money laid by for some time to come, having recently sold a quantity of flour at twenty-four dollars the ton, which is three times the price I have been accustomed to ask hitherto.

"All this comes from our hard-won liberty, and the sound laws by which that liberty is assured. I am my own master, and you will not be surprised to learn that the sound of the drum is never heard here, and that except upon the Fourth of July, the glorious anniversary of our

independence, neither soldiers, uniforms nor bayonets are ever to be seen."

During the whole of our homeward journey I was absorbed in deep reflection: it will perhaps be thought that my mind was full of Mr. Bulow's parting speech, but in fact the subject of my thoughts was altogether different; I was thinking of how I would cook my turkey, for I was worried by the fear lest Hartford should be unable to furnish all my wants; for I wished to raise a trophy worthy of the spoil.

I make a painful sacrifice in suppressing the details of the trouble I was at to arrange a distinguished reception for the American guests whom I invited. It must suffice to say that the partridge wings were served *en papillote* [*i. e.* cooked in paper], and the grey squirrels stewed in Madeira.

As for the turkey, which made our only roast dish, it was charming to behold, most pleasing to the smell, and tasted delicious. And so, until the very last morsel was consumed, from all round the table came cries of "Very good!" "Exceedingly good!" "Oh, dear sir, what a glorious bit!"

JEAN ANTHELME BRILLAT-SAVARIN.

## POLITICS

Gold and iron are good  
To buy iron and gold;  
All earth's fleece and food  
For their like are sold.  
Boded Merlin wise,  
Proved Napoleon great,—  
Nor kind nor coinage buys  
Aught above its rate.  
Fear, Craft, and Avarice  
Cannot rear a State.  
Out of dust to build  
What is more than dust,—  
Walls Amphion piled  
Phœbus stablish must.  
When the Muses nine  
With the Virtues meet,  
Find to their design  
An Atlantic seat,  
By green orchard boughs  
Fended from the heat,  
Where the statesman ploughs  
Furrow for the wheat;  
When the Church is social worth,  
When the state-house is the hearth,  
Then the perfect State is come,  
The republican at home.

**I**N dealing with the State, we ought to remember that its institutions are not aboriginal,

though they existed before we were born; that they are not superior to the citizen; that every one of them was once the act of a single man; every law and usage was a man's expedient to meet a particular case; that they all are imitable, all alterable; we may make as good, we may make better. Society is an illusion to the young citizen. It lies before him in rigid repose, with certain names, men, and institutions, rooted like oak-trees to the centre, round which all arrange themselves the best they can. But the old statesman knows that society is fluid; there are no such roots and centres, but any particle may suddenly become the centre of the movement and compel the system to gyrate round it; as every man of strong will, like Pisistratus or Cromwell, does for a time, and every man of truth, like Plato or Paul, does for ever. But politics rest on necessary foundations, and cannot be treated with levity. Republics abound in young civilians who believe that the laws make the city, that grave modifications of the policy and modes of living and employments of the population, that commerce, education, and religion, may be voted in or out; and that any measure, though it were absurd, may be imposed on a people if only you can get sufficient voices to make it a law. But the wise know that foolish legislation is a rope of sand which perishes in the twisting; that the State must follow and not lead the character and

progress of the citizen; the strongest usurper is quickly got rid of; and they only who build on Ideas, build for eternity; and that the form of government which prevails is the expression of what cultivation exists in the population which permits it. The law is only a memorandum. We are superstitious, and esteem the statute somewhat: so much life as it has in the character of living men is its force. The statute stands there to say, Yesterday we agreed so and so, but how feel ye this article to-day? Our statute is a currency which we stamp with our own portrait: it soon becomes unrecognizable, and in process of time will return to the mint. Nature is not democratic, nor limited-monarchical, but despotic, and will not be fooled or abated of any jot of her authority by the pertest of her sons; and as fast as the public mind is opened to more intelligence, the code is seen to be brute and stammering. It speaks not articulately, and must be made to. Meantime the education of the general mind never stops. The reveries of the true and simple are prophetic. What the tender poetic youth dreams, and prays, and paints to-day, but shuns the ridicule of saying aloud, shall presently be the resolutions of public bodies; then shall be carried as grievance and bill of rights through conflict and war, and then shall be triumphant law and establishment for a hundred years, until it gives place in turn to new prayers and pictures.

The history of the State sketches in coarse outline the progress of thought, and follows at a distance the delicacy of culture and of aspiration.

The theory of politics which has possessed the mind of men, and which they have expressed the best they could in their laws and in their revolutions, considers persons and property as the two objects for whose protection government exists. Of persons, all have equal rights, in virtue of being identical in nature. This interest, of course, with its whole power demands a democracy. Whilst the rights of all as persons are equal, in virtue of their access to reason, their rights in property are very unequal. One man owns his clothes, and another owns a county. This accident, depending primarily on the skill and virtue of the parties, of which there is every degree, and secondarily on patrimony, falls unequally, and its rights, of course, are unequal. Personal rights, universally the same, demand a government framed on the ratio of the census; property demands a government framed on the ratio of owners and of owning. Laban, who has flocks and herds, wishes them looked after by an officer on the frontiers, lest the Midianites shall drive them off; and pays a tax to that end. Jacob has no flocks or herds and no fear of the Midianites, and pays no tax to the officer. It seemed fit that Laban and Jacob should have equal rights

to elect the officer who is to defend their persons, but that Laban and not Jacob should elect the officer who is to guard the sheep and cattle. And, if question arise whether additional officers or watch-towers should be provided, must not Laban and Isaac, and those who must sell part of their herds to buy protection for the rest, judge better of this, and with more right, than Jacob, who, because he is a youth and a traveller, eats their bread and not his own?

In the earliest society the proprietors made their own wealth, and so long as it comes to the owners in the direct way, no other opinion would arise in any equitable community than that property should make the law for property, and persons the law for persons.

But property passes through donation or inheritance to those who do not create it. Gift, in one case, makes it as really the new owner's, as labour made it the first owner's; in the other case, of patrimony, the law makes an ownership which will be valid in each man's view according to the estimate which he sets on the public tranquillity.

It was not, however, found easy to embody the readily-admitted principle that property should make law for property, and persons for persons; since persons and property mixed themselves in every transaction. At last it seemed settled that the rightful distinction was that the proprietors

should have more elective franchise than non-proprietors, on the Spartan principle of "calling that which is just, equal; not that which is equal, just."

That principle no longer looks so self-evident as it appeared in former times, partly because doubts have arisen whether too much weight had not been allowed in the laws to property, and such a structure given to our usages as allowed the rich to encroach on the poor, and to keep them poor; but mainly because there is an instinctive sense, however obscure and yet inarticulate, that the whole constitution of property, on its present tenures, is injurious, and its influence on persons deteriorating and degrading; that truly the only interest for the consideration of the State is persons; that property will always follow persons; that the highest end of government is the culture of men; and that if men can be educated, the institutions will share their improvement and the moral sentiment will write the law of the land.

If it be not easy to settle the equity of this question, the peril is less when we take note of our natural defences. We are kept by better guards than the vigilance of such magistrates as we commonly elect. Society always consists in greatest part of young and foolish persons. The old, who have seen through the hypocrisy of courts and statesmen, die and leave no wisdom to their sons. They believe their own newspaper, as

their fathers did at their age. With such an ignorant and deceivable majority, States would soon run to ruin, but that there are limitations beyond which the folly and ambition of governors cannot go. Things have their laws, as well as men; and things refuse to be trifled with. Property will be protected. Corn will not grow unless it is planted and manured; but the farmer will not plant or hoe it unless the chances are a hundred to one that he will cut and harvest it. Under any forms, persons and property must and will have their just sway. They exert their power, as steadily as matter its attraction. Cover up a pound of earth never so cunningly, divide and subdivide it; melt it to liquid, convert it to gas; it will always weigh a pound; it will always attract and resist other matter by the full virtue of one pound weight:—and the attributes of a person, his wit and his moral energy, will exercise, under any law or extinguishing tyranny, their proper force,—if not overtly, then covertly; if not for the law, then against it; if not wholesomely, then poisonously; with right, or by might.

The boundaries of personal influence it is impossible to fix, as persons are organs of moral or supernatural force. Under the dominion of an idea which possesses the minds of multitudes, as civil freedom, or the religious sentiment, the powers of persons are no longer subjects of calculation. A nation of men unanimously bent on

freedom or conquest can easily confound the arithmetic of statistics, and achieve extravagant actions, out of proportion to their means; as the Greeks, the Saracens, the Swiss, the Americans, and the French have done.

In like manner, to every particle of property belongs its own attraction. A cent is the representative of a certain quantity of corn or other commodity. Its value is in the necessities of the animal man. It is so much warmth, so much bread, so much water, so much land. The law may do what it will with the owner of property; its just power will still attach to the cent. The law may in a mad freak say that all shall have power except the owners of property; they shall have no vote. Nevertheless, by a higher law, the property will, year after year, write every statute that respects property. The non-proprietor will be the scribe of the proprietor. What the owners wish to do, the whole power of property will do, either through the law or else in defiance of it. Of course I speak of all the property, not merely of the great estates. When the rich are outvoted, as frequently happens, it is the joint treasury of the poor which exceeds their accumulations. Every man owns something, if it is only a cow, or a wheelbarrow, or his arms, and so has that property to dispose of.

The same necessity which secures the rights of person and property against the malignity or folly

of the magistrate, determines the form and methods of governing, which are proper to each nation and to its habit of thought, and nowise transferable to other states of society. In this country we are very vain of our political institutions, which are singular in this, that they sprung, within the memory of living men, from the character and condition of the people, which they still express with sufficient fidelity,—and we ostentatiously prefer them to any other in history. They are not better, but only fitter for us. We may be wise in asserting the advantage in modern times of the democratic form, but to other states of society, in which religion consecrated the monarchical, that and not this was expedient. Democracy is better for us, because the religious sentiment of the present time accords better with it. Born democrats, we are nowise qualified to judge of monarchy, which, to our fathers living in the monarchical idea, was also relatively right. But our institutions, though in coincidence with the spirit of the age, have not any exemption from the practical defects which have discredited other forms. Every actual State is corrupt. Good men must not obey the laws too well. What satire on government can equal the severity of censure conveyed in the word *politic*, which now for ages has signified *cunning*, intimating that the State is a trick?

The same benign necessity and the same prac-

tical abuse appear in the parties, into which each State divides itself, of opponents and defenders of the administration of the government. Parties are also founded on instincts, and have better guides to their own humble aims than the sagacity of their leaders. They have nothing perverse in their origin, but rudely mark some real and lasting relation. We might as wisely reprove the east wind or the frost, as a political party, whose members, for the most part, could give no account of their position, but stand for the defence of those interests in which they find themselves. Our quarrel with them begins when they quit this deep natural ground at the bidding of some leader and, obeying personal considerations, throw themselves into the maintenance and defence of points nowise belonging to their system. A party is perpetually corrupted by personality. Whilst we absolve the association from dishonesty, we cannot extend the same charity to their leaders. They reap the rewards of the docility and zeal of the masses which they direct. Ordinarily our parties are parties of circumstance, and not of principle; as the planting interest in conflict with the commercial; the party of capitalists and that of operatives: parties which are identical in their moral character, and which can easily change ground with each other in the support of many of their measures. Parties of principle, as, religious sects, or the party of free-trade, of uni-

versal suffrage, of abolition of slavery, of abolition of capital punishment, degenerate into personalities, or would inspire enthusiasm. The vice of our leading parties in this country (which may be cited as a fair specimen of these societies of opinion) is that they do not plant themselves on the deep and necessary grounds to which they are respectively entitled, but lash themselves to fury in the carrying of some local and momentary measure, nowise useful to the commonwealth. Of the two great parties which at this hour almost share the nation between them, I should say that one has the best cause, and the other contains the best men. The philosopher, the poet, or the religious man, will of course wish to cast his vote with the democrat, for free-trade, for wide suffrage, for the abolition of legal cruelties in the penal code, and for facilitating in every manner the access of the young and the poor to the sources of wealth and power. But he can rarely accept the persons whom the so-called popular party propose to him as representatives of these liberalities. They have not at heart the ends which give to the name of democracy what hope and virtue are in it. The spirit of our American radicalism is destructive and aimless: it is not loving; it has no ulterior and divine ends, but is destructive only out of hatred and selfishness. On the other side, the conservative party, composed of the most moderate, able, and cul-

tivated part of the population, is timid, and merely defensive of property. It vindicates no right, it aspires to no real good, it brands no crime, it proposes no generous policy; it does not build, nor write, nor cherish the arts, nor foster religion, nor establish schools, nor encourage science, nor emancipate the slave, nor befriend the poor, or the Indian, or the immigrant. From neither party, when in power, has the world any benefit to expect in science, art, or humanity, at all commensurate with the resources of the nation.

I do not for these defects despair of our republic. We are not at the mercy of any waves of chance. In the strife of ferocious parties, human nature always finds itself cherished, as the children of the convicts at Botany Bay are found to have as healthy a moral sentiment as other children. Citizens of feudal states are alarmed at our democratic institutions lapsing into anarchy, and the older and more cautious among ourselves are learning from Europeans to look with some terror at our turbulent freedom. It is said that in our licence of construing the Constitution, and in the despotism of public opinion, we have no anchor; and one foreign observer thinks he has found the safeguard in the sanctity of Marriage among us; and another thinks he has found it in our Calvinism. Fisher Ames expressed the popular security more wisely, when he compared a

monarchy and a republic, saying that a monarchy is a merchantman, which sails well, but will sometimes strike on a rock and go to the bottom; whilst a republic is a raft, which would never sink, but then your feet are always in water. No forms can have any dangerous importance whilst we are befriended by the laws of things. It makes no difference how many tons weight of atmosphere presses on our heads, so long as the same pressure resists it within the lungs. Augment the mass a thousandfold, it cannot begin to crush us, as long as reaction is equal to action. The fact of two poles, of two forces, centripetal and centrifugal, is universal, and each force by its own activity develops the other. Wild liberty develops iron conscience. Want of liberty, by strengthening law and decorum, stupefies conscience. "Lynch-law" prevails only where there is greater hardihood and self-subsistency in the leaders. A mob cannot be a permanency; everybody's interest requires that it should not exist, and only justice satisfies all.

We must trust infinitely to the beneficent necessity which shines through all laws. Human nature expresses itself in them as characteristically as in statues, or songs, or railroads; and an abstract of the codes of nations would be a transcript of the common conscience. Governments have their origin in the moral identity of men. Reason for one is seen to be reason for another,

and for every other. There is a middle measure which satisfies all parties, be they never so many or so resolute for their own. Every man finds a sanction for his simplest claims and deeds in decisions of his own mind, which he calls Truth and Holiness. In these decisions all the citizens find a perfect agreement, and only in these; not in what is good to eat, good to wear, good use of time, or what amount of land or public aid each is entitled to claim. This truth and justice men presently endeavour to make application of to the measuring of land, the apportionment of service, the protection of life and property. Their first endeavours, no doubt, are very awkward. Yet absolute right is the first governor; or, every government is an impure theocracy. The idea after which each community is aiming to make and mend its law, is the will of the wise man. The wise man it cannot find in nature, and it makes awkward but earnest efforts to secure his government by contrivance; as by causing the entire people to give their voices on every measure; or by a double choice to get the representation of the whole; or by a selection of the best citizens; or to secure the advantages of efficiency and internal peace by confiding the government to one, who may himself select his agents. All forms of government symbolize an immortal government, common to all dynasties and independent of num-

bers, perfect where two men exist, perfect where there is only one man.

Every man's nature is a sufficient advertisement to him of the character of his fellows. My right and my wrong is their right and their wrong. Whilst I do what is fit for me, and abstain from what is unfit, my neighbour and I shall often agree in our means and work together for a time to one end. But whenever I find my dominion over myself not sufficient for me, and undertake the direction of him also, I overstep the truth, and come into false relations to him. I may have so much more skill or strength than he that he cannot express adequately his sense of wrong, but it is a lie, and hurts like a lie both him and me. Love and nature cannot maintain the assumption; it must be executed by a practical lie, namely, by force. This undertaking for another is the blunder which stands in colossal ugliness in the governments of the world. It is the same thing in numbers, as in a pair, only not quite so intelligible. I can see well enough a great difference between my setting myself down to a self-control, and my going to make somebody else act after my views; but when a quarter of the human race assume to tell me what I must do, I may be too much disturbed by the circumstances to see so clearly the absurdity of their command. Therefore all public ends look vague and quixotic

beside private ones. For any laws but those which men make for themselves, are laughable. If I put myself in the place of my child, and we stand in one thought and see that things are thus or thus, that perception is law for him and me. We are both there, both act. But if, without carrying him into the thought, I look over into his plot, and, guessing how it is with him, ordain this or that, he will never obey me. This is the history of governments,—one man does something which is to bind another. A man who cannot be acquainted with me, taxes me; looking from afar at me, ordains that a part of my labour shall go to this or that whimsical end,—not as I, but as he happens to fancy. Behold the consequence. Of all debts men are least willing to pay the taxes. What a satire is this on government! Everywhere they think they get their money's worth, except for these.

Hence the less government we have the better,—the fewer laws, and the less confided power. The antidote to this abuse of formal Government is the influence of private character, the growth of the Individual; the appearance of the principal to supersede the proxy; the appearance of the wise man; of whom the existing government is, it must be owned, but a shabby imitation. That which all things tend to educe; which freedom, cultivation, intercourse, revolutions, go to form and deliver, is character; that is the end

of Nature, to reach unto this coronation of her king. To educate the wise man the State exists, and with the appearance of the wise man the State expires. The appearance of character makes the State unnecessary. The wise man is the State. He needs no army, fort, or navy,—he loves men too well; no bribe, or feast, or palace, to draw friends to him; no vantage ground, no favourable circumstance. He needs no library, for he has not done thinking; no church, for he is a prophet; no statute book, for he has the lawgiver; no money, for he is value; no road, for he is at home where he is; no experience, for the life of the creator shoots through him, and looks from his eyes. He has no personal friends, for he who has the spell to draw the prayer and piety of all men unto him needs not husband and educate a few to share with him a select and poetic life. His relation to men is angelic; his memory is myrrh to them; his presence, frankincense and flowers.

We think our civilization near its meridian, but we are yet only at the cock-crowing and the morning star. In our barbarous society the influence of character is in its infancy. As a political power, as the rightful lord who is to tumble all rulers from their chairs, its presence is hardly yet suspected. Malthus and Ricardo quite omit it; the *Annual Register* is silent; in the *Conversations' Lexicon* it is not set down; the President's Message, the Queen's Speech, have not

mentioned it; and yet it is never nothing. Every thought which genius and piety throw into the world, alters the world. The gladiators in the lists of power feel, through all their frocks of force and simulation, the presence of worth. I think the very strife of trade and ambition is confession of this divinity; and successes in those fields are the poor amends, the fig-leaf with which the shamed soul attempts to hide its nakedness. I find the like unwilling homage in all quarters. It is because we know how much is due from us that we are impatient to show some petty talent as a substitute for worth. We are haunted by a conscience of this right to grandeur of character, and are false to it. But each of us has some talent, can do somewhat useful, or graceful, or formidable, or amusing, or lucrative. That we do, as an apology to others and to ourselves for not reaching the mark of a good and equal life. But it does not satisfy *us*, whilst we thrust it on the notice of our companions. It may throw dust in their eyes, but does not smooth our own brow, or give the tranquillity of the strong when we walk abroad. We do penance as we go. Our talent is a sort of expiation, and we are constrained to reflect on our splendid moment with a certain humiliation, as somewhat too fine, and not as one act of many acts, a fair expression of our permanent energy. Most persons of ability meet in society with a kind of tacit appeal. Each seems

to say, "I am not all here." Senators and presidents have climbed so high with pain enough, not because they think the place specially agreeable, but as an apology for real worth, and to vindicate their manhood in our eyes. This conspicuous chair is their compensation to themselves for being of a poor, cold, hard nature. They must do what they can. Like one class of forest animals, they have nothing but a prehensile tail; climb they must, or crawl. If a man found himself so rich-natured that he could enter into strict relations with the best persons and make life serene around him by the dignity and sweetness of his behaviour, could he afford to circumvent the favour of the caucus and the press, and covet relations so hollow and pompous as those of a politician? Surely nobody would be a charlatan who could afford to be sincere.

The tendencies of the times favour the idea of self-government, and leave the individual, for all code, to the rewards and penalties of his own constitution; which work with more energy than we believe whilst we depend on artificial restraints. The movement in this direction has been very marked in modern history. Much has been blind and discreditable, but the nature of the revolution is not affected by the vices of the revolvers; for this is a purely moral force. It was never adopted by any party in history, neither can be. It separates the individual from

all party, and unites him at the same line to the race. It promises a recognition of higher rights than those of personal freedom, or the security of property. A man has a right to be employed, to be trusted, to be loved, to be revered. The power of love, as the basis of a State, has never been tried. We must not imagine that all things are lapsing into confusion if every tender protestant be not compelled to bear his part in certain social conventions; nor doubt that roads can be built, letters carried, and the fruit of labour secured, when the government of force is at an end. Are our methods now so excellent that all competition is hopeless? could not a nation of friends even devise better ways? On the other hand, let not the most conservative and timid fear anything from a premature surrender of the bayonet and the system of force. For, according to the order of nature, which is quite superior to our will, it stands thus: there will always be a government of force where men are selfish; and when they are pure enough to abjure the code of force they will be wise enough to see how these public ends of the post-office, of the highway, of commerce and the exchange of property, of museums and libraries, of institutions of art and science can be answered.

We live in a very low state of the world, and pay unwilling tribute to governments founded on force. There is not, among the most religious

and instructed men of the most religious and civil nations, a reliance on the moral sentiment and a sufficient belief in the unity of things to persuade them that society can be maintained without artificial restraints, as well as the solar system; or that the private citizen might be reasonable and a good neighbour, without the hint of a jail or a confiscation. What is strange too, there never was in any man sufficient faith in the power of rectitude to inspire him with the broad design of renovating the State on the principle of right and love. All those who have pretended this design have been partial reformers, and have admitted in some manner the supremacy of the bad State. I do not call to mind a single human being who has steadily denied the authority of the laws, on the simple ground of his own moral nature. Such designs, full of genius and full of faith as they are, are not entertained except avowedly as air-pictures. If the individual who exhibits them dare to think them practicable, he disgusts scholars and churchmen; and men of talent and women of superior sentiments cannot hide their contempt. Not the less does nature continue to fill the heart of youth with suggestions of this enthusiasm, and there are now men,—if indeed I can speak in the plural number,—more exactly, I will say, I have just been conversing with one man, to whom no weight of adverse experience will make it for a moment ap-

pear impossible that thousands of human beings might exercise towards each other the grandest and simplest sentiments, as well as a knot of friends, or a pair of lovers.

RALPH WALDO EMERSON.
